

## Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

## Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

## Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

Prizes will also be awarded to the Third and Fourth in General Proficiency, and to the First and Second in the following subjects:—Classics, Mathematics, Modern Languages, Natural Sciences, English Subjects. The "Taylor-Jones Memorial Prize" will be awarded to the best Candidate in Scripture History. Two Medals will be awarded to the best Candidates in Shorthand.

The Regulations for the above Examinations can be obtained on application to the Secretary at the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., *Secretary*.

## PRELIMINARY EXAMINATION OF

**MEDICAL STUDENTS.**—The COLLEGE OF PRECEPTORS will hold an Examination for Certificates recognized by the Education Department, the Incorporated Law Society, the General Medical Council, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, and other bodies, on the 6th, 7th, and 8th of March, 1900.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool.

Examination Fee, 25s.

Regulations and Entry Forms may be obtained on application to the Secretary of the College of Preceptors, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., *Secretary*.

## COLLEGE OF PRECEPTORS.—

### EXTRACT FROM THE BY-LAWS.

Section II., clause 5.—"The Council may grant the privileges of Membership, without payment, to holders of Diplomas of the College, as long as such persons are engaged in teaching in Secondary Schools."

Holders of the College Diplomas who are not Members of the College are requested to send their Addresses to the Secretary of the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., *Secretary*.

## COLLEGE OF PRECEPTORS.

(Bloomsbury Square, W.C.)

### LECTURES FOR TEACHERS.

The First Course of Lectures (Twenty-sixth Annual Series), by JAMES SULLY, M.A., LL.D., Grote Professor of the Philosophy of Mind and Logic in University College, London, on "Intellectual Education," will commence on Thursday, February 15th, at 7 p.m.

\* \* A Doreck Scholarship, of the value of £20, will be awarded at the Diploma Examination at Christmas next, to the candidate who, having attended two courses of the Training Class Lectures during the preceding twelve months, and having passed the full examination for a College Diploma, stands first in the examination in Theory and Practice of Education.

The Fee for the Course is Half-a-guinea.

The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

Members of the College have Free Admission to this Course.  
C. R. HODGSON, B.A., *Secretary*.

## COLLEGE OF PRECEPTORS,

BLOOMSBURY SQUARE, LONDON, W.C.

### CONFERENCE OF TEACHERS

AT THE

IMPERIAL INSTITUTE, SOUTH KENSINGTON, S.W.

Saturday, January 6th, 1900.

The Council of the College of Preceptors, having accepted the invitation of the authorities of the English Education Exhibition to take part in a Series of Conferences to be held in the Conference Hall of the Imperial Institute after the opening of the Exhibition by H.R.H. the Prince of Wales on January 5th, have arranged to hold a Conference of heads of schools connected with the College, on Saturday, January 6th, when the question of

### The Conditions of the Formation of a Register of Secondary Schools

will be discussed.

The Chair will be taken by Sir JOSHUA FITCH, at 11 a.m.

The subject will be introduced by R. WORMELL, Esq., D.Sc., M.A., F.C.P., and Papers will be read:—

"On the Essentials of Sanitary School Premises." By ARTHUR NEWSHOLME, M.D., F.R.C.P., D.P.H. (Lond.), Medical Officer of Health for Brighton.

"On Examination Tests, Oral and Written." By H. L. WITHERS, Esq., M.A., Professor of Education at Owens College, Manchester.

"On Local Examinations as conducted in France." By Miss E. WILLIAMS.

The sanitary sufficiency of School Premises, the adequacy of the Teaching Staff and Appliances for Teaching, &c., will form the subject of discussion at the Morning sitting—from 11 a.m. to 1 p.m.

The question of Examinations (oral and written) as a means of testing the results of the Teaching will be discussed at the Afternoon sitting—from 3 to 6 p.m.

All Teachers, whether members of the College or not, are cordially invited to attend, and to take part in the discussion.  
C. R. HODGSON, B.A., *Secretary*.

### UNIVERSITY DIPLOMA FOR WOMEN.

THE UNIVERSITY OF ST. ANDREWS grants Diploma and Title of L.L.A. to WOMEN.

60 Examination Centres in Great Britain and abroad. For Prospectus, apply to the SECRETARY, L.L.A. Scheme, The University, St. Andrews, N.B.

## NOTICE.—The "EDUCATIONAL

TIMES" for February will contain the CLASS LISTS of CANDIDATES who have passed at the recent CHRISTMAS EXAMINATIONS of the College of Preceptors.

The Volume for 1899 is now ready, price 7s. 6d. Cases for binding the Volume may also be had, price 1s. 6d.; by post, 1s. 8d.

## LONDON COLLEGE OF MUSIC.

A Short Course for B.A. and B.Sc., 1900, is provided.

Fee for the whole Course (B.A.) in all Subjects, 28. 8s. 0d.

Fee for the whole Course (B.Sc.) in all Subjects, 27. 17s. 6d.

Single Subjects can be taken.

Prospectus, and full particulars of Classes, post free on application to

THE SECRETARY,  
University Correspondence College London Office,  
32 Red Lion Square, Holborn, W.C.

## UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)  
Principal—H. R. REICHEL, M.A.

The Session began October, 3rd, 1899. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts student, £11. 1s.; ditto for Intermediate Science or Medical student, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—i.e. £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (beginning September 19), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the Prospectus, apply to  
JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar.

## UNIVERSITY OF WALES.

Special Day and Evening Courses in all Departments are given by the Professors and Lecturers.

THE WORK OF WOMEN STUDENTS IS UNDER THE SUPERVISION OF A LADY TUTOR.

For full information see Prospectus, which will be forwarded free on application to

JAMES RAFTER, Secretary.

## UNIVERSITY MATRICULATION AND COLLEGE OF PRECEPTORS.—Mr. E. BAYNES BADCOCK, M.A. Cambridge (Sen. Opt.), prepares for Examinations privately and in Classes. One or two Boarders can be taken.—62 Warwick Gardens, Kensington, W.

## THE SANITARY INSTITUTE.

### Examination for School Teachers.

The next Examination in PRACTICAL HYGIENE FOR SCHOOL TEACHERS will be held in London on February 8th, 9th, 10th, 1900. The Examination includes:—Part I. Personal Hygiene and Physiology.—Part II. Hygiene in Schools and Private Dwellings.—And Part III. Hygiene in Education.

Forms and particulars can be obtained at the Offices of the Institute, Margaret Street, London, W.

E. WHITE WALLIS, Secretary.

## BEDFORD COLLEGE, LONDON (FOR WOMEN).

YORK PLACE, BAKER STREET, W.  
SESSION 1899-1900.

The Lent Term will begin on Thursday, January 18. Lectures are given in all branches of General and Higher Education. A single Course of Lectures in any subject may be attended, or Students can enter for (1) a University Course in Arts or Science in preparation for the Examinations for Degrees of the University of London; (2) a College Course; (3) a Professional Training in Teaching (prepares for the Examinations for Teaching Diplomas granted by the Universities of Cambridge and London); (4) a Course of Scientific Instruction in Hygiene (designed to furnish work with the training for such posts as are now open to them); (5) the Art School. Six Laboratories are open to Students for Practical Work.

Arrangements will be made for Students who have Matriculated in January.

Students can reside in the College.  
Further information on application to the PRINCIPAL.

## BEDFORD COLLEGE, LONDON (FOR WOMEN).

YORK PLACE, BAKER STREET, W.  
DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

(Recognized by the Cambridge Syndicate.)

Head of the Department—

Miss HANNAH ROBERTSON, B.A.,  
to whom all applications should be addressed.

The Session for 1900 begins on January 18.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

A Course of Ten Lectures for Teachers on the Teaching of Elementary Physiology, followed by a class for practical work, will be given by J. S. Atkins, M.A., M.B., on Saturday mornings at 10 a.m., beginning on January 20.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss M. PUNNETT, B.A. (Lond.).

The object of this College is to give a professional training to educated women who intend to teach. In addition to the course of training, it offers the advantages of a College life and one year's residence in Cambridge.

The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers, and are prepared for the Cambridge Teachers' Certificate (Theory and Practice). Ample opportunity is given for practice in teaching science, languages, mathematics, and the other usual school subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

### THE

## FROEBEL EDUCATIONAL INSTITUTE,

TALGARH ROAD, WEST KENSINGTON, LONDON, W.

Chairman of the Committee—Mr. W. MATHER.

Treasurer—Mr. C. G. MONTEFIORE.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

Principal—Madame MICHAELIS.

Mistress of Method—Miss E. E. LAWRENCE.

KINDERGARTEN AND SCHOOL.

Headmistress—Miss M. BOYS SMITH.

Further particulars may be obtained on application to the PRINCIPAL.

## HOME AND COLONIAL

### SCHOOL SOCIETY.

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

TRAINING COLLEGE FOR SECONDARY TEACHERS.

HIGHBURY HILL HOUSE, LONDON, N.

Principal—THE REV. DAVID J. THOMAS, M.A.

Vice-Principal—Miss PENSTONE.

Students (Resident and Non-resident) trained for the Examinations of the National Froebel Union, and for the Teachers' Diploma of the College of Preceptors.

A High School for Girls, Transition Class, and Kindergarten are attached to the College for purposes of Demonstration and Practice.

## ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS.—This College provides a complete course of training for well-educated women who intend to become Teachers. The Course includes attendance at Professor Laurie's Lectures on Education at the University of Edinburgh, and practice in Class Teaching in several schools. Several Bursaries of £30 are offered annually. Students may enter in January and October for a Course of Three Terms. Apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

## THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

- Headmasters' Conference.
- Incorporated Association of Headmasters.
- College of Preceptors.
- Teachers' Guild.
- Welsh County Schools' Association.
- Private Schools' Association.
- Association of Headmasters of Preparatory Schools.
- Association of Headmasters of Roman Catholic Schools.
- Assistant-Masters' Association.
- Association of Technical Institutions.
- &c.

The rates of Commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

## THE MANCHESTER CLERICAL, MEDICAL, AND SCHOLASTIC

### ASSOCIATION, Limited,

8 KING STREET, MANCHESTER.

PRINCIPALS of Schools are invited to send particulars of Vacancies for Assistants. School Transfers negotiated. For terms, apply—SECRETARY.

## SCHOLASTIC REGISTRY (very

select).—Masterships. Sale and Purchase of Schools. Private Tuition. All Scholastic Work. Large and rich connexion.—Rev. F. H. CARLISLE, M.A., 8 Serjeants' Inn, Fleet Street, London.

## KELLAND TRAINING COLLEGE

FOR TEACHERS, HIGH SCHOOL, AND KINDERGARTEN, LEICESTER.

Principals—Miss MORGAN, N.F.U. (Higher).

Miss J. MORGAN, B.A. (Lond.).

Head Kindergarten Mistress—

Miss JOHNSON, N.F.U. (Higher).

Preparation for the National Froebel Union Certificates. Cambridge Teacher's Diploma. Entrance Scholarships. Grounds comprise Tennis Court, Croquet Lawn, &c.

## ROYAL INDIAN ENGINEERING

COLLEGE, COOPERS HILL, STAINES.

The Course of Study is arranged to fit an Engineer for employment in Europe, India, and the Colonies. About Forty Students will be admitted in September, 1900. The Secretary of State will offer them for competition. Twelve Appointments as Assistant Engineers in the Public Works Department, and Four Appointments as Assistant Superintendents in the Telegraphs Department, One in the Accounts Branch, Public Works Department, and One in the Traffic Department, Indian State Railways.

For Particulars apply to SECRETARY at College.

## MR. H. A. NESBITT (joint-author

of "The Science and Art of Arithmetic," by A. SONNENSCHIEIN and H. A. NESBITT, M.A., has a few hours at his disposal for Lessons in Ladies' Schools in Mathematics, History, and Literature. Mr. Nesbitt also gives Lectures on the Teaching of Arithmetic, 16 South Hill Park Gardens, Hampstead, N.W.

**Notes on Shakespeare's As You Like It.** By T. DUFF BARNETT, B.A. (Lond.). 1s.

# PROFESSOR MEIKLEJOHN'S SERIES.

**The Art of Writing English.** A Manual for Students. With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters. By J. M. D. MEIKLEJOHN, M.A. Second Edition. Crown 8vo, 340 pp. . . . . 2s 6d.

"The Art of Writing English' teems with good advice."—*Literary World*.  
"Whatever Prof. Meiklejohn writes is sure to be vigorous and racy, and, on the subject of English composition, he is peculiarly well qualified to speak."—*The Journal of Education*.

**One Hundred Short Essays in Outline.** By Professor MEIKLEJOHN. Second Edition. Crown 8vo, 110 pp. . . . . 1s.

These Outline Essays have been prepared to assist Candidates for Queen's Scholarships, for the Civil Service, and in other Examinations. They show the young students how to put their matter into the right perspective, and how to make clear and brief statements. They treat of such subjects as Athletics, The Bank of England, The Bicycle, Competition, The Navy, Newspapers, &c., &c.—in short, subjects generally set in Public Examinations.

**A New Geography on the Comparative Method.** With Maps and Diagrams and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. Twenty-third Edition. 130th Thousand. Crown 8vo, 630 pp. . . . . 4s. 6d.

"A most useful manual for examiners, and full of stimulating matter for students of geography. Its picturesqueness of description and vividness of style make it almost as interesting and enjoyable reading as a book of travels."—*The Journal of Education*.  
"For all that is best worth knowing no better book than this could be studied."—*The Educational News*.

**A School Geography; with Special Reference to Commerce and History.** With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A., sometime Adam de Brome Exhibitioner of Oriel College, Oxford, F.R.G.S. Crown 8vo, 410 pp. . . . . 2s. 6d.

This book is suited to scholars of from thirteen to sixteen years of age. It is not an abridgement of the New Geography, but a separate and substantive work. The Comparative Method has been followed throughout. Nearly a hundred small maps and diagrams have been inserted in the text. The United Kingdom has been treated with the greatest fullness, the other countries of the world in their due proportion.

**The Comparative Atlas.** By J. G. BARTHOLOMEW, F.R.G.S., and Edited by Professor MEIKLEJOHN. Containing 64 Plates and a General Index . . . . . 2s. 6d.

"No atlas that we know at anything like the price gives so much so well."  
*The Teachers' Monthly*.

"This is certainly the most comprehensive work ever published at the moderate price of half-a-crown. From the attractive frontispiece, representing the flags of all nations, to the final page on geographical etymology, there is not a wasted inch."—*The Teachers' Review*.

**A New History of England and Great Britain.** With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. Fourteenth Edition. Crown 8vo, 740 pp. . . . . 4s. 6d.

"I like your History very much. It is suggestive, and does not ignore the social and literary side of things."—*Miss A. F. Andrews, Malda Vale High School for Girls, W.*

"I am very pleased with the concise statements and orderly marshalling of facts; such an improvement on our ordinary Histories."—*B. A. Little, Esq., M.A., The College, Buxton*.

**The English Language: its Grammar, History, and Literature.** By J. M. D. MEIKLEJOHN, M.A. Eighteenth Edition. Enlarged, with Exercises and additional Analyses. Crown 8vo, 470 pp. . . . . 4s. 6d.

"For the First Class College of Preceptors your work is most excellent and valuable."—*The Rev. F. Marshall, M.A., Almondsbury Grammar School*.

"I gave it to a girl candidate for an English scholarship; she got first place, and valued the help she got from the book."—*W. Johnson, Esq., B.A., Elmfield College, York*.

**A New Arithmetic.** By G. A. CHRISTIAN, B.A. Lond., and G. COLLAR, B.A., B.Sc. Lond. Crown 8vo, 562 pp. Fourth Edition . . . . . 4s. 6d.

"We also welcome it because in several of its chapters—such, for example, as those on factors, decimal fractions, involution and evolution, surds, and logarithms—it seems to us to mark a distinct advance on the majority of its predecessors."—*The School Guardian*.

"We consider it so satisfactory that we have at once placed it on our list of books."—*The Rev. G. E. S. Walpole, D.D., Principal, Bede College, Durham*.

**A Short Arithmetic.** By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. Crown 8vo, 196 pp. . . . . 1s.

With Answers, 1s. 6d.

"In the preparation of the 'Short Arithmetic' the authors have chiefly had in view the requirements of pupils varying in age from twelve to sixteen. Examples have been selected from a very wide area. These include the University Local Examinations, the University School Examinations, Examinations of the College of Preceptors and of the Education Department, and the Examinations for County Council Scholarships."

**A School Algebra for Junior Forms.** By F. OSCAR LANE, B.Sc. Lond., Assistant-Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. . . . . 1s. 6d.

With Answers, 266 pp. 2s. 0d.

"A very trustworthy book for beginners, extending to indices, surds, and progressions."—*The University Correspondent*.

**Europe: its Physical and Political Geography, with Chapters on Latitude and Longitude, Day and Night, and the Seasons.** Adapted to the requirements of the Code, with a Double-Page Map, in Colour. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. 96 pp. . . . . 6d.

**Africa: its Geography, Resources, and Chronicle of Discovery up to 1897.** By M. J. C. MEIKLEJOHN, B.A. Oxon. Third Edition. Crown 8vo, 76 pp. . . . . 4d.

"This little book is, for its size, remarkably full of information about Africa, and gives pithy explanations of such current expressions as 'sphere of influence' and 'hinter-land,' &c.—*The Teachers' Aid*.

**The British Colonies and Dependencies: their Resources and Commerce.** With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. Third Edition. Crown 8vo, 96 pp. . . . . 6d.

"This manual is terse and full; intelligently paragraphed and skillfully managed typographically. It does credit to the compiler, and we hope this work may gain the recognition it really merits."—*The Educational News*.

**A Short Geography, with the Commercial Highways of the World.** Fifteenth Edition. Crown 8vo, 196 pp. . . . . 1s.

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid*.

Clearness and conciseness exemplified."—*The Private Schoolmaster*.

**A Short History of England and Great Britain.** B.C. 55 to A.D. 1890. Eleventh Edition. Crown 8vo . . . . . 1s.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature; and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education*.

**A Short Grammar of the English Tongue, with Three Hundred and Thirty Exercises.** Tenth Edition . . . . . 1s.

This little book is written in the clearest and simplest style for beginners. It contains:—

- |                                 |   |
|---------------------------------|---|
| i. The Simplest Definitions.    | iv. Graduated Methods of Parsing.       |
| ii. Slowly graduated Exercises. | v. Bad Grammar Corrected, with Reasons. |
| iii. Clearly printed Tables.    | vi. Analysis, with Plain Diagrams.      |

**A New Spelling Book.** With Side Lights from History. Eighth Edition. Crown 8vo, 152 pp. . . . . 1s.

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian*.

## WILLIAMS & NORGATE'S SCHOOL BOOKS.

### THE FRENCH LANGUAGE.

**DELBOS.—THE STUDENT'S GRADUATED FRENCH READER.** For the Use of Public Schools. I.—First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LÉON DELBOS, M.A., H.M.S. "Britannia." Twelfth Edition. 166 pp. Crown 8vo, cloth, 2s.

**DELBOS.—THE STUDENT'S GRADUATED FRENCH READER.** For the Use of Public Schools. II.—Second Year: Historical Pieces and Tales. Edited, with Notes, by LÉON DELBOS, M.A., H.M.S. "Britannia." Sixth Edition. 180 pp. Crown 8vo, cloth, 2s.

"It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos."—*Athenæum*.  
"The notes are critical and explanatory. The book is well printed and excellently got up."—*Educational Times*.

**DELBOS.—LITTLE EUÈNE'S FRENCH READER.** For Beginners. Anecdotes and Tales. Edited, with Notes and a complete Vocabulary. Third Edition. Crown 8vo, cloth, 1s. 6d.

**EUÈNE'S THE STUDENT'S COMPARATIVE GRAMMAR OF THE FRENCH LANGUAGE.** With an Historical Sketch of the Formation of French. For the Use of Public Schools. With Exercises. By G. EUÈNE FASSACHT, late French Master, Westminster School. Twentieth Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or, separately, Grammar, 3s.; Exercises, 2s. 6d.

**EUÈNE'S FRENCH METHOD.** Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar." By the same Author. Sixteenth Edition. Crown 8vo, cloth, 1s. 6d.

**EUÈNE'S COMPARATIVE FRENCH-ENGLISH STUDIES.** Grammatical and Idiomatic. Being an entirely re-written Edition of the "French Exercises for Middle and Upper Forms." Eleventh Edition. Cloth, 2s. 6d.

**VICTOR HUGO.—LES MISÉRABLES.** Les Principaux Épisodes. Edited, with Life and Notes, by J. BOELLE, Officier d'Académie. Second Edition. 2 Vols. Crown 8vo, each 3s. 6d.

**VICTOR HUGO.—NOTRE-DAME DE PARIS.** Adapted for the use of Schools and Colleges. By J. BOELLE. 2 Vols. Crown 8vo, each 3s.

**FRENCH COMPOSITION THROUGH LORD MACAULAY'S ENGLISH.** Edited, with Notes, Hints, and Introduction, by JAMES BOELLE, B.A. Univ. Gall., Senior French Master, Dulwich College, &c. Crown 8vo, cloth.

Vol. I. Frederick the Great. 3s.  
Vol. II. Warren Hastings. 3s. 6d.  
Vol. III. Lord Clive. 3s.

"This, we may say at once, is an exceedingly useful idea, well carried out, and one of the best things of its class that we have seen. . . . We can pronounce the equivalence of the idioms recommended to be quite unusually just."—*Saturday Review*.

### THE GERMAN LANGUAGE.

**WEISSE'S COMPLETE PRACTICAL GRAMMAR OF THE GERMAN LANGUAGE.** With Exercises on Conversation, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely re-written. Crown 8vo, cloth, 6s.

"We have no hesitation in pronouncing this the fullest and most satisfactory German grammar yet published in England."—*Journal of Education*.

**WEISSE'S SHORT GUIDE TO GERMAN IDIOMS.** Being a Collection of the Idioms most in use. With Examination Papers. Second Edition. 8vo, cloth, 2s.

**MÖLLER (A.).—A GERMAN READING BOOK.** A Companion to Schlatter's "German Class Book." New Edition. Corrected to the Official German Spelling. With a complete Vocabulary. 12mo, cloth, 2s.

**HEIN'S GERMAN EXAMINATION PAPERS.** Comprising a complete set of German Papers set at the Local Examinations in the four Universities of Scotland. By G. HEIN, Aberdeen Grammar School. Crown 8vo, cloth, 2s. 6d.

**A SHORT SKETCH OF GERMAN LITERATURE.** Prepared for the Scottish Leaving Certificate Examinations. By VIVIAN PHILLIPPS, B.A., Fettes College. Second Edition, Revised. Pott 8vo, 1s.

#### ULRICH'S GERMAN CLASSICS:—

Schiller's Wilhelm Tell.	Goethe's Faust.
" Jungfrau von Orleans.	" Gotz von Berlichingen.
" Wallensteins Tod.	" Lessing's Nathan der Weise.
" Neffe als Onkel.	

Sewed, 9d. net; cloth, 1s. net. Cloth, 1s. 6d. net.

**ULRICH'S GERMAN PROSE.** With Notes on Syntax and Translation, followed by a complete Vocabulary. By ANTON J. ULRICH, Master of Modern Languages at the King's School, Warwick. Revised by JOHN GIBSON, M.A. Crown 8vo, cloth, 2s. 6d.

"A cheap and useful little volume."—*Journal of Education*.  
"This is a distinctly good composition book."—*Guardian*.  
"The selections for translation are admirable in every way."—*Educational Review*.

**KEY TO GERMAN PROSE.** 3s. 6d.

**ULRICH'S GERMAN DECLENSIONS.** 1s. net.

NOTE.—Mr. Ulrich's School Books obtained a Silver Medal at the Antwerp Exhibition.

20 SOUTH FREDERICK STREET, EDINBURGH;  
AND 7 BROAD STREET, OXFORD.

## From JOHN C. NIMMO'S LIST.

### THE SEMITIC SERIES.

An important New Series of Standard Handbooks on the Babylonians, Assyrians, and Allied Semitic Races of Ancient History.

EDITED BY

JAMES ALEXANDER CRAIG,

Professor of Semitic Languages and Literatures and Hellenistic Greek,  
University of Michigan, U.S.A.

The First Volume ready January 1900.

**BABYLONIANS AND ASSYRIANS.** Life and Customs. (With special reference to the Contract Tablets and Letters.) By the Rev. A. H. SAYCE, Professor of Assyriology at Oxford.

In crown 8vo, cloth, gilt top, 5s. net each Volume.

#### PUBLISHER'S NOTE.

Recent scientific research has stimulated a widely increasing interest in the study of the Babylonians, Assyrians, and allied Semitic races of ancient history among scholars, students, and the general reading public. It has provided us with a picture of a hitherto unknown civilization, and a history of one of the great branches of the human family. The object of the present series is to present, compactly and in popular scientific form, a knowledge of the more important facts in the History, Religion, Government, Jurisprudence, Language, Customs, Art, Archaeology, &c., of the peoples dealt with, in a way that will be serviceable to the reading public generally, as well as to teachers and masters of every grade, students, the clergy, and others. The series is also one that can be especially recommended as suitable for school and college libraries throughout the country, on account of the compactness and accessibility of the information presented and the high standard of accuracy maintained. The authors are selected from the most eminent authorities in Europe and America, each being a specialist in his subject. Each volume will be complete in itself, and the series, taken as a whole, will neglect no phase of the general subject. A special feature is that the authors go, in almost every instance, to the original sources for their information, and thus avoid the errors liable to arise in following those who derive their knowledge from other sources.

#### LIST OF THE VOLUMES.

- I. HEBREWS. History and Government. By Prof. J. F. McCURDY, University of Toronto, Canada.
- II. HEBREWS. Ethics and Religion. By Prof. ARCHIBALD DUFF, Airedale College, Bradford.
- III. THE SUMERIANS. Language, History, and Religion. By Prof. FRITZ HOMMEL, University of Munich, Germany.
- IV. BABYLONIANS AND ASSYRIANS. History to the Fall of Babylon. By Prof. FRITZ HOMMEL, University of Munich, Germany.
- V. BABYLONIANS AND ASSYRIANS. Religion. By Prof. J. A. CRAIG, University of Michigan, U.S.A.
- VI. BABYLONIANS AND ASSYRIANS. Life and Customs. (With special reference to the Contract Tablets and Letters.) By Prof. A. H. SAYCE, University of Oxford. [Ready in January.]
- VII. BABYLONIANS AND ASSYRIANS. Excavations and Account of Decipherment of Inscriptions. By Prof. A. V. HILPRECHT, University of Pennsylvania, U.S.A.
- VIII. ARABIA. Discoveries in; and History and Religion until Mohammed. By Dr. EDUARD GLAZER, University of Munich, Germany.
- IX. DEVELOPMENT OF ISLAMIC THEOLOGY, JURISPRUDENCE, AND THEORY OF THE STATE. By Prof. D. B. MACDONALD, Hartfield Theological Seminary, U.S.A.

In addition to the above, the following volumes are to be included in the Series, and others may be added from time to time:—

- X. PHENICIA. History and Government, including Colonies, Trade, and Religion.
- XI. PALESTINE AND SYRIA. Important Discoveries in Recent Years.
- XII. ARABIC LITERATURE AND SCIENCE SINCE MOHAMMED.
- XIII. THE INFLUENCE OF SEMITIC ART AND MYTHOLOGY ON WESTERN NATIONS.

LONDON: JOHN C. NIMMO, 14 KING STREET, STRAND.

# MESSRS. LONGMANS & CO.'S LIST.

## Mathematics and Science.

By J. HAMLIN SMITH, M.A.

**A Treatise on Arithmetic.** With an Appendix on Approximation, in which a New Method of Decimalisation of Money is given with a view to Shortening and Simplifying much of the Work in Commercial Arithmetic. Crown 8vo, 3s. 6d. (Copies may be had without the Answers.) A KEY, 9s.

**Exercises in Arithmetic.** Arranged and Adapted to the Sections in Hamblin Smith's "Treatise on Arithmetic." Crown 8vo, 1s. 6d.; with Answers, 2s. A KEY, 6s. 6d.

**A Shilling Arithmetic.** For the use of Elementary Classes and Preparatory Schools. Cr. 8vo, 1s.; with Answers, 1s. 6d.

**Elementary Algebra.** New Edition, with a large number of Additional Exercises. With or without Answers. Crown 8vo, 3s. 6d.; Answers separately, 6d. A KEY, crown 8vo, 9s.

\*\*\* The Old Edition can still be had.

**Exercises on Algebra.** Small 8vo, 2s. 6d. (Copies may be had without the Answers.)

**Elementary Trigonometry.** Crown 8vo, 4s. 6d. A KEY, 7s. 6d.

**Elementary Statics.** Crown 8vo, 3s.

**Elementary Hydrostatics.** Crown 8vo, 3s. A KEY to Statics and Hydrostatics, 6s.

By Prof. GANOT. Translated and Edited by E. ATKINSON, Ph.D., F.C.S.

**Elementary Treatise on Physics, Experimental and Applied.** With 9 Coloured Plates and 1,057 Woodcuts. Crown 8vo, 15s.

**Natural Philosophy for General Readers and Young Persons:** a Course of Physics divested of Mathematical Formulae, expressed in the language of daily life. With 7 Plates, 624 Woodcuts, and an Appendix of Questions. Crown 8vo, 7s. 6d.

## History.

By CYRIL RANSOME, M.A.

**Short History of England.** From the Earliest Times to the Present Day. For the use of Middle Forms of Schools. With Tables, Plans, Maps, Index, &c. Crown 8vo, 3s. 6d.

By H. R. HEATLEY, M.A., and J. ARNOLD TURNER, M.A.

**Selections from Ovid.** With Notes and Vocabulary. 16mo, 1s. 6d.

## Classics—continued.

By T. K. ARNOLD, M.A.

**Arnold's Practical Introduction to Latin Prose Composition.** By G. GRANVILLE BRADLEY, D.D., Dean of Westminster. 5s.

A KEY, for the use of Masters only. 5s. 2½d. net, post free.

**Arnold's Practical Introduction to Greek Prose Composition.** By EVELYN ABBOTT, M.A., LL.D. Crown 8vo, 3s. 6d.

A KEY, for the use of Masters only. 3s. 8d. net, post free.

By FRANCIS DAVID MORICE, M.A.

**Stories in Attic Greek.** With Notes and Vocabulary. Crown 8vo, 3s. 6d.

By F. RITCHIE, M.A.

**First Steps in Greek.** Crown 8vo, 2s.

**A Practical Greek Method for Beginners.**

By F. RITCHIE, M.A., and E. H. MOORE, M.A. Crown 8vo, 3s. 6d.

A KEY, for the use of Masters only. 5s. 2½d. net, post free.

**Easy Greek Grammar Papers.** Fcap. 8vo, 1s. 6d.

**First Steps in Latin.** Crown 8vo, 1s. 6d.

A KEY, for the use of Masters only. 3s. 8½d. net, post free.

**Fabulae Faciles.** A First Latin Reader. Containing Detached Sentences and Consecutive Stories. With Notes and Vocabulary. Crown 8vo, 2s. 6d.

**Imitative Exercises in Easy Latin Prose.** Based on "Fabulae Faciles." Crown 8vo, 1s. 6d.

**Exercises in Latin Prose Composition.** Crown 8vo, 2s. 6d.

A KEY, for the use of Masters only. 3s. 8½d. net, post free.

**Easy Continuous Latin Prose.** Crown 8vo, 3s. 6d.

**First Latin Verse Book.** Crown 8vo, 2s.

**Easy Latin Passages for Translation.** Small 8vo, 2s. [Just published.]

**Latin Grammar Papers.** Fcap. 8vo, 1s.

**Discernenda.** List of Latin Words liable to be Confounded. I. Verbs; II. Miscellaneous. Crown 8vo, 9d.

[Just published.]

## English Grammar and Literature.

By ALEXANDER BAIN, LL.D.

**A First or Introductory English Grammar.** 18mo, 1s. 4d.

KEY with additional Exercises. 18mo, 1s. 9d.

**A Higher English Grammar.** Fcap. 8vo, 2s. 6d.

**A Companion to the Higher English Grammar.** Being intended as a help to the thorough mastery of English. Crown 8vo, 3s. 6d.

**English Composition and Rhetoric.** Original Edition. Crown 8vo, 4s.

**English Composition and Rhetoric.** Enlarged Edition. (Two Parts.) Part I.: The Intellectual Elements of Style. Crown 8vo, 3s. 6d. Part II.: The Emotional Qualities of Style. Crown 8vo, 3s. 6d.

**On Teaching English,** with Detailed Examples and the Definition of Poetry. Crown 8vo, 2s. 6d.

By THOMAS ARNOLD, M.A.

**A Manual of English Literature,** Historical and Critical. Seventh Edition, Revised. Crown 8vo, 7s. 6d.

# Clarendon Press, Oxford.

1. On Rag-made Paper, cloth, 6s. net.
2. On Oxford India Paper, cloth, 7s. 6d. net.

**Nova Anthologia Oxoniensis.** Translations into Greek and Latin Verse. Edited by ROBINSON ELLIS, M.A., and A. D. GODLEY, M.A.

New Issue. Crown 8vo, cloth, 7s. 6d.

ROMAN POETS OF THE AUGUSTAN AGE.

**Horace and the Elegiac Poets.** By W. Y. SELLAR. With a Memoir of the Author by ANDREW LANG, M.A.

A limited number of the 8vo Edition remain on sale. With Portrait, 14s.

Now Ready. In Three Sizes.

**The Complete Works of Molière.**

1. Crown 8vo, on Rag-made Paper. Cloth, 5s.
2. Crown 8vo, on Oxford India Paper. Cloth, 9s. 6d.
3. In Miniature, 32mo. 4 Vols. in case. Cloth, 14s.

Just Published. Crown 8vo, cloth limp, 1s. 6d.

**Glossarial Index to the Works of Geoffrey Chaucer.**  
By the Rev. WALTER W. SKEAT, Litt.D.

Crown 8vo, Separate Issue, with numerous Maps, 5s.

**The History of South Africa to the Jameson Raid.**  
Being Vol. IV., Part I. of "A Historical Geography of the British Colonies." By C. P. LUCAS, B.A.

**Shakespeare.—As You Like It.** Edited by W. ALDIS WRIGHT, D.C.L. 1s. 6d.

**Scott.—Marmion.** Edited, with Introduction and Notes, by T. BAYNE. Extra fcap. 8vo, 3s. 6d.

— **Lady of the Lake.** Edited, with Preface and Notes, by W. MINTO, M.A. Extra fcap. 8vo, 3s. 6d.

— **Lay of the Last Minstrel.** By the same Editor. With Map. Second Edition. Extra fcap. 8vo, 2s.; in parchment, 3s. 6d.

**Helps to the Study of the Book of Common Prayer.** Being a Companion to "Church Worship." By W. R. W. STEPHENS, B.D. Crown 8vo, cloth, 2s.; also in leather bindings.

**Notes on the Gospel of St. Luke, for Junior Classes.** By E. J. MOORE SMITH, Lady Principal of the Ladies' College, Durban, Natal. Stiff covers, 1s. 6d.

**Old Testament History for Schools.** By T. H. STOKOE, D.D. Part I. (Second Edition).—From the Creation to the Settlement in Palestine. Part II.—From the Settlement to the Disruption of the Kingdom. Part III.—From the Disruption to the Return from Captivity. 2s. 6d. each, with Maps.

**An Elementary Latin Grammar.** By J. BARROW ALLEN, M.A. New Edition, Revised and Enlarged. 2s. 6d.

**German Passages for Unprepared Translation.** For the use of Candidates for Army, Civil Service, and other Examinations. Selected and Arranged by EDUARD EHBEKE. Extra fcap. 8vo, stiff covers, 3s.

**Niebuhr.—Griechische Heroen-Geschichten** (Tales of Greek Heroes). With English Notes and Vocabulary by EMMA S. BUCHHEIM. Second Revised Edition. Extra fcap. 8vo, cloth, 2s.; stiff covers, 1s. 6d. Edition A.—Text in German Type. Edition B.—Text in Roman Type.

**Cicero.—De Senectute.** Edited, with Introduction and Notes, by L. HUXLEY, M.A. Extra fcap. 8vo, 2s.

**Livy.—Book XXII.** With Introduction, Notes, and Maps. By M. T. TATHAM, M.A. 2s. 6d.

**Horace.** With a Commentary. (In a size suitable for the use of Schools.) Vol. I. The Odes, Carmen Saeculare, and Epodes. By E. C. WICKHAM, D.D. Second Edition. Extra fcap. 8vo, 6s.

**Virgil.—Aeneid. Books IV.—VI.** By T. L. PAPILLON, M.A., and A. E. HAIGH, M.A. Crown 8vo, stiff covers, 2s.

— **Aeneid IX.** Edited, with Introduction and Notes, by A. E. HAIGH, M.A. Limp, 1s. 6d.; In Two Parts, 2s.

## Forthcoming Volumes of the Oxford Classical Texts.

(Scriptorum Classicorum Bibliotheca Oxoniensis.)

**Thucydides Historiae.** Libri I.—IV. Recensuit H. STUART JONES.

**Platonis Opera.** Tom. I. Recensuit J. BURNET.

**Lucreti de Rerum Natura Liber.** Recensuit C. BAILEY.

**Taciti Opera Minora.** Recensuit H. FURNEAUX.

Nearly Ready.

**Aeschyli Tragoediae et Fragmenta.** Recensuit A. SIDGWICK.

Second Edition, Revised. In 2 Vols., cloth, 15s.

**Thucydides.** Translated into English, with Introduction, Marginal Analysis, Notes, and Index. By B. JOWETT, M.A., late Master of Balliol College.

Crown 8vo, cloth, 5s.

**Select Fragments of the Greek Comic Poets.** Edited by A. W. PICKARD, Cambridge, Fellow of Balliol College.

**Euripides.—Hecuba.** With Introduction and Notes. By C. H. RUSSELL, M.A. 2s. 6d.

**Euclid Revised.** Containing the Essentials of the Elements of Plane Geometry as given by Euclid in his First Six Books. Edited by R. C. J. NIXON, M.A. Third Edition. Crown 8vo, 6s.

Sold separately as follows:—

Book I., 1s. Books I., II., 1s. 6d.  
Books I.—IV., 3s. Books V., VI., 3s. 6d.

**Elementary Plane Trigonometry.** By R. C. J. NIXON, M.A. Crown 8vo, 7s. 6d.

**Practical Work in General Physics.** By W. G. WOOLLCOMBE, M.A., B.Sc. Crown 8vo, 2s. each Part.

Part I.—General Physics.  
Part II.—Heat.  
Part III.—Light and Sound.  
Part IV.—Magnetism and Electricity.

**Class-Book of Chemistry.** By W. W. FISHER, M.A., F.C.S. Fourth Edition. Crown 8vo, 4s. 6d.

**Book-keeping.** New and Enlarged Edition. By Sir R. G. C. HAMILTON and JOHN BALL. Cloth, 2s.

Ruled Exercise Books adapted to the above may be had, price 1s. 6d.; also, adapted to the Preliminary Course only, price 4d.

**A Manual of Current Shorthand, Orthographic and Phonetic.** By HENRY SWEET, M.A. Crown 8vo, 4s. 6d.

ALSO PUBLISHED BY HENRY FROWDE.

**Old Testament Manuals.** By the Rev. H. M. CLIFFORD, M.A. Oxon. Genesis, Exodus, 1s. 6d. each; Joshua and Judges, Ruth and I. Samuel, 9d. each; II. Samuel, I. Kings, II. Kings, Ezra, and Nehemiah, 1s. each. All fcap. 8vo, limp cloth.

These are the only Manuals which omit from the Text the passages not usually read in public. Also the only ones that have

- (i.) The Notes opposite the Text.
- (ii.) References to every Person and Place mentioned in each Book.
- (iii.) Questions upon each book, with References to the Answers.

Over 70,000 copies have been sold in England for educational purposes, and they have been highly commended by the Headmasters of Harrow, Rugby, Shrewsbury, Cheltenham, and 100 other Masters and Mistresses and Clergy. These Manuals are as cheap as any that are published, varying in price from 9d. to 1s. 6d. each. They will be found very suitable for Class Teaching in Day and Sunday Schools, for Family Reading, for Parents with their Children, and for Private Study.

ALSO IN PREPARATION FOR EXAMINATION.

## The Educational Times.

### *A Year of Conclusions.*

If 1898 was characteristically a year of discussion, 1899 has been a year of conclusions, and 1900 ought to be a year of fruition. At all events in the domain of educational politics, the past year has seen the definite formulation and legislation of sundry new departures, which had been carefully and patiently discussed, and which are now, we think, generally accepted, even by many who looked on them with some alarm or misgiving. Amongst what we have called the conclusions of the year are the passing of the Board of Education Bill, the elaboration of a scheme for reorganizing the Education Department, to come into effect three months hence, the housing of London University at South Kensington, and the remodelling of the University by a statutory Commission.

The Education Act, as we maintained from the first, is far from being a halting and half-hearted measure : it ought rather to be regarded as revolutionary and epoch-making. It brings the whole area of "education in England and Wales" under the superintendence of a Board which will practically be a single unfettered Minister of the Crown. It virtually puts in his hands the educational functions of the Charity Commissioners and the Science and Art Department—hereafter to be known as the South Kensington Department of the Board of Education, or, briefly, "The Board of Education, South Kensington." It creates a Consultative Committee, and ordains inspection and registration under the authority of the Board, with an implied necessity for the examination of schools and the training of teachers. It even (practically) calls into existence Local Authorities over the whole area ; for, by the first clause, it gives the Board superintendence over the educational functions of the County Councils, and it releases their grants from the technical restriction. Again, it involves the appointment of one Parliamentary Secretary to the Board who will not be the Secretary of the Elementary Department.

Now, all this is all but the complete Ministry of Education. So far from the Act making a mere start in the direction of reorganization, and being an instalment of a new administration, it has essentially reorganized everything. Nothing more is necessary beyond the creation of Local Authorities, responsible to the Board, and not to the County Councils. Since these Authorities are to look to the Board of Education, it matters

comparatively little how they are to be created, so long as the majority does not represent the elementary School Boards, and so long as they include representatives of County Councils, School Boards, Universities, teachers, and women. All these are indispensable. When the Local Authorities are created the Ministry of Education will be fully equipped, and Parliament will have done its work. The rest is the mere routine of evolution.

As the Universities are the final charge and responsibility of the Board, the new metropolitan University will be a crucial test of its powers and capacities. The remodelling of the Education Department and the remodelling of London University will be effected simultaneously and side by side. Board and University will acquire their virile strength together as we turn over the page of the nineteenth century, and begin to write the history of the twentieth. The Board must help the University to be strong, and the University must serve the Board, being central to the kingdom, in its most populous area, and with its constitution still young and plastic, by supplying the "norma" of highest-grade education in the continuous national scale over which the Board will exercise control from its beginning to its end.

The other Universities have their respective and definite characters and aims, some closely resembling those which we have just imagined for the University of London, others differing more or less widely. But, under the elasticity of the new organization, not even the ancient Universities of Oxford and Cambridge will fail to supply the highest-grade education of the continuous scale, for the Board school boy is already able, and the Board school girl ought to and will be able, to climb from scholarship to scholarship, and to end on a level with those who have arrived by way of the preparatory and the public school. Under the same elasticity which we have long enjoyed as a nation, and which we have maintained by our prudent scheme of reorganization, conserving all that is worth keeping, and linking the new with the old, we shall see all types of English schools continuing to do their special work, drawing aid from the State if they accept the State's control, relying on their present resources and connexions if they choose to preserve their actual independence, but all profiting alike by raised ideals and reinforced energies.

Throughout the discussions of the past few years we have always contended that efficient schools of every variety, dependent and independent, public and private, would be safe

under a reorganized Department. Their common interests are many, their antagonism will be slight. Whilst the State builds and supports a new type on unoccupied ground, effective schools of the older types will continue to be filled by very much the same kind of boys and girls as those who fill them to-day. No doubt there may be cases of hardship here and there, but they will scarcely deserve to be regarded as the necessary result of a change of system.

On the whole, then, we can feel confident as we look forward to the "nineteen hundreds" for the fruition of the tree which has been planted and watered with so much assiduous care.

### NOTES.

THE Headmasters' Conference met this year on December 21 and 22, at the College of Preceptors. The Rev. H. W. Moss, Headmaster of Shrewsbury, presided. There was a large attendance of Headmasters of "Conference" schools in various parts of the country, including the Headmasters of Winchester, Rugby, Charterhouse, Marlborough, Merchant Taylors', Clifton, Liverpool College, Nottingham High School, Bedford, Bradford, Durham, Felsted, Haileybury, Lancing, Stonyhurst, Blackheath, Godolphin, Chigwell, Mill Hill, Manchester, Tonbridge, and Wolverhampton. The Chairman congratulated the Conference on the passing of the Board of Education Act, and then submitted the first resolution, as follows:—

That, in the opinion of this Conference, it is important that the Local Authorities to be constituted for educational purposes (1) should be empowered to deal with education of all kinds—primary, secondary, and technical; (2) should have charge of areas sufficiently large to permit of a complete organization of educational work; (3) should be so constituted as to do justice to all the interests involved in such organization.

Mr. Moss thought his hearers would all agree that those who had profited most by the teaching of elementary schools should have access to the higher forms of teaching, and boys should be enabled to pass from both primary and secondary into technical schools. "In reckoning up educational possibilities, it was necessary to take into account the large number of private and preparatory schools established throughout the country. Women's education, again, was a very important branch of the subject. Unless there was a discriminating impartial authority, it was quite certain that power and resources would be wasted." Mr. Moss believed that a comprehensive educational system logically implied an authority whose purview should include all the different kinds of education within its district.

THERE was much discussion on the resolution above quoted; and, in the end, it was abandoned by almost every member of the Conference. Canon Armour, of Crosby, observed that its fundamental principle was that the Local Authority should deal with education of all kinds. If, therefore, it were passed in that form, those who might ultimately appoint the Local Authorities might accept the principle and reject its second section. He should be inclined to make the second section the fundamental proposition. His fear was that several county boroughs were not large enough for the complete organization of education—"primary," secondary, and technical. He moved the following amendment, which was eventually carried as a substantive resolution:—

That, in the opinion of this Conference, it is important that the Local Authorities to be constituted for educational purposes should

have charge, by the grouping of counties and county boroughs, of areas sufficiently large to permit of complete organization of educational work.

The contrast between this and the original resolution is rather striking. The large majority of the Headmasters were clergymen, and they seem to have been impressed by the scheme of the Birmingham Archidiaconal Council, which the Bishop of Coventry sent to us last month, and which divides England into ten educational areas. Dr. Wilson, of Lancing, expounded this scheme; but the Chairman declared that it was not in his mind when he moved the resolution. He was frankly for county areas and a common Local Authority. Mr. Rundall and several other members considered it futile to expect that the Government would adopt any larger areas than those of the counties.

A RESOLUTION in favour of training was then moved by Dr. Rendall:—

That this Conference heartily sympathizes with the establishment of professorships, lectureships, and other University or collegiate agencies for the training of secondary school teachers, and presses upon all those preparing for the profession the importance of systematic training in the theory and practice of education.

Dr. Rendall said some work in the direction indicated had been done, but the work must be better done and more effectively organized. It must be carried out by men of experience, weight, light, leading, and genius, and not, as hitherto, be a mere appendage—a little excrescence of the older Universities. Until this was done, the training of teachers would not hold the place it deserved. Effective lectureships and professorships should be established in connexion with the higher educational institutions. It was a side of higher education on which County Councils and those entrusted with the disposal of funds could most effectually assert themselves. Mr. Bell and Mr. Upcott supported, but the Rev. C. Eppstein (Reading) opposed the motion. He said that the question was very wide, and it was only raised because England had been seized with a sort of panic, owing to the idea that she was being ousted from the markets of the world. The effect of the proposal would be that they would lose that elasticity and freedom which had characterized our public schools for many years. Headmasters fought shy of trained teachers, and would not have them in their schools. This was on the familiar lines of the old-fashioned, unbending headmasters of five or ten years ago, who are by this time nearly all extinct. "Untrained men have been good enough for me" used to be the argument of reactionary headmasters—comparable to nothing so much as the proud humility of the father of the modern Board-school boy:—"I never had no book-larning." Dr. Rendall's resolution was carried with two dissentients.

THIS did not exhaust what the Headmasters had to say on the training of secondary teachers. They carried by a considerable majority the following resolution moved by Mr. Swallow, of Chigwell:—

That this Conference is of opinion that, after the expiration of five years from the commencement of the Board of Education Act, no new member of the profession should be qualified for a place on the register of secondary teachers who has not undergone a systematic course of training.

Mr. Swallow reminded the Conference that two efforts had been made in late years to establish training colleges, and both had signally failed. He was convinced each failure was due in the first instance to the fact that there had been no sufficient demand for trained teachers to create a supply. This was a

matter in which headmasters of public schools in particular could help their weaker brethren. "They should press this matter on the profession now for two reasons: first, they should show the public that they were in earnest, and then they could not afford to wait, because they would not be allowed to do so. There was a provision in the recent Act that the Consultative Committee should prepare a register of teachers, and it was almost certain that the Committee would insist on some proof of capacity for their work being given by the teachers registered. Surely the Committee would not be satisfied with a University degree." Mr. Lyttelton supported the proposal, which, he urged, was not in any way likely to limit the number of competent young teachers. With such a restriction on admission to the register, there will be no difficulty whatever in providing the means of secondary training.

KING'S COLLEGE, LONDON, is making a courageous effort to maintain its scientific departments abreast of the requirements of the age. Judging, however, from the first list of subscriptions for this purpose which has appeared in the *Times*, the £20,000 required will take some time to collect. It is to be hoped that the forthcoming dinner to be held in Lincoln's Inn Hall, under the presidency of the Leader of the House of Commons, in aid of the movement, will induce some of our wealthier citizens, and especially Churchmen, to assist an institution which, although its professoriate must be recruited from Churchmen, deserves the support of the country generally. There is no doubt that the medical school and the scientific departments have suffered in the past owing to ecclesiastical influences which have not been at all times progressive. The scientific side of the College would have everything to gain by being freed from any trace of religious tests. Scientific departments which are not adequately equipped and provided with the best teachers can be of but little real use. In his recent prize-giving speech at the School of Science at Merton—unless both the *Standard* and the *Times* reporters were "nid, nid, noddin'"—Lord Russell of Killowen, the Lord Chief Justice, made a curious blunder, all the more amusing as, we think, the occasion was his first formal entry into the ranks of the champions of secondary education. He spoke of a scheme for a Board of Education being "shadowed forth" by the Duke of Devonshire, and seemed unaware of the passing of the Bill. We have always understood that lawyers make a point of not reading a statute until they are called upon to construe it; but it seems that peers who are also judges are privileged not to know of the coming into existence of their own creations. The Chief Justice's severe labours on the Venezuelan Arbitration would, however, amply excuse any ignorance he may show of the contents of the statutes of 1899.

WE were glad to notice his strong words in favour of preserving the full play of voluntary effort in education. As he said, we do not want boys to be uniform like sausages—a result which a uniform system of education must naturally tend to produce. The Chief Justice is, indeed, *laudator temporis acti*, and he regretted the disappearance of the old apprenticeship system, which was our forefathers' scheme of technical education, just as, not long ago, in a speech on legal education, he regretted that the prolonged legal training in a pleader's

chambers was a thing of the past. He spoke the usual comforting words for the benefit of the unsuccessful ones, which it is well that boys should hear on such occasions. In spite of our belief in the power of education, we can hardly accept his contention that perseverance and strength of character will outstrip genius. Yet, although the last may soar to the skies, the first two qualities will often remove mountains, and the real province of educational effort lies in the development of these. But the Chief Justice's wide and varied experience of life does not enable him to show schoolmasters the solution of this ancient problem.

THE Lord Chief Justice's career is such a splendid example of what perseverance and strength of character can achieve in a learned profession without the advantages of University training that no better instance is wanted to show the importance of these as educational aims. To rise from a solicitor's office to be premier Judge of the High Court must have required both determination and the force of a strong personality—which, when he was only Mr. Charles Russell, sometimes, it is said, overbore even the Judges before whom he practised. Doubtless, occasionally, such characters become brusque and impatient of the less decided and assertive ways of men of milder temperament. It is the rugged result which Nature's uncontrolled hand usually achieves. But, if a University training develops a finer and more sympathetic manner, it may also produce the subtle, cynical wit which is far removed from the mellow generosity of real culture. Lord Russell of Killowen's predecessor, the late Lord Coleridge, with his literary tastes and old-fashioned, courteous manner, suggesting almost the quintessence of affectation, might be said to combine both the above results of University training. What more biting thing could be said of a public man than this by Lord Coleridge: "X. is almost an orator, he is almost a lawyer—indeed, he is almost a gentleman"?

THE understanding arrived at between the Oxford University Extension Delegacy and the Educational Committee of the Co-operative Union is bearing fruit. The Delegacy was represented at the Co-operative Congress at Liverpool in May of last year, and co-operative representatives have twice recently visited Oxford, to confer with the Delegacy on matters of educational policy. One result of these conferences is to be seen in the appointment of Mr. Joseph Owen, B.A., as a class teacher in economics, industrial history, and political science, with a view to improving the teaching of these subjects among co-operative members. Examinations will be held in these subjects, and the students who do sufficiently well will obtain certificates, enabling them to lecture on these matters as accredited teachers. Mr. Joseph Owen has been well chosen as the first Oxford lecturer in this new series. Himself a brilliant Extension student, he has but recently completed a most honourable career at Balliol, obtaining a First Class in the Honours School of Modern History, and a research studentship at the London School of Economics.

THE following ingenious answers come fresh from school. A sight translation exercise: "Pourquoi jettent-ils des pierres dans mon jardin? Pour m'ennuyer," was rendered: "Why do they throw stones into my garden? For my manure." In a

Sunday school, the question: "What did David play upon?" got the ready answer from a very small boy: "He played upon the floor." A teacher, desiring to "elicit" the word "anxious" from her class, asked: "What do we get when we are expecting somebody?" and received the disconcerting reply: "A telegram." The dangers of definitions are illustrated by the fact that a ladder was proposed by a Board-school boy as an example of a transparent object, which had just been defined as "something you can see through."

## SUMMARY.

### THE MONTH.

THE Headmasters' Conference and the Modern Languages Association both met on December 21. With the former we deal in our leading columns. At the meeting of the Association, Prof. Skeat, the President, was in the chair; and among others present were Dr. Richard Garnett (the in-coming President), Sir Walter Besant, Prof. J. W. Hales, Mr. Israel Gollancz, Mr. A. T. Pollard (City of London School), Mr. Sidney Lee, Prof. Buchheim, Dr. Furnivall, Mr. Francis Storr, Prof. Walter Rippmann, Dr. H. Frank Heath, Mr. Gerrans, Mr. W. G. Lipscomb (Hon. Secretary), Dr. Karl Breul, Prof. Fiedler, Mr. Michael Sadler, Prof. Schüddekopf, and Mr. Joseph Knight. Prof. Skeat gave an interesting address on the importance of "Early English" studies, and was emphatic on the value of phonetics.

It was a fact that all the most valuable improvements made in recent years in the science of etymology had mainly resulted from the study of phonetics, accompanied by a close and careful observation of the written forms found in our early MSS. The teachers of modern languages had at last found out the true clue to the study—namely, that it was the spoken utterance which really constituted the word and the sentence, and that the written characters were mere symbols convenient for recalling such words and sentences to our recollection, but, at the same time, subservient and subordinate. He would exhort all his hearers to pay the highest regard to the actual pronunciation of the spoken words, and to seize every opportunity of addressing themselves to the ears of their pupils rather than to their eyes.

Prof. Skeat was presented with a replica of the portrait which has been painted for Christ's College, Cambridge. Amongst the resolutions of the Association was one declaring that the compulsory study of both French and German was desirable in all secondary schools, and indispensable on the modern sides, or in schools other than classical.

THE English Education Exhibition, at the Imperial Institute, has been arranged in the following five main divisions:—(1) Education, as controlled by School Boards and Boards of Managers of public elementary schools, together with training colleges for teachers in primary schools. (2) Secondary education, including (a) boys' preparatory schools; (b) private schools for girls and boys; (c) endowed and proprietary schools for girls; (d) endowed, proprietary, grammar, and public schools for boys; (e) secondary training colleges. (3) Technical education, with schools of art. (4) University and higher education. (5) Educational institutions and other bodies, not falling under any of the above heads. The exhibits are intended to represent the education of the present day, and also to illustrate the history and traditions of education. One great feature will be the number of specimens of the work of pupils and students in art and in manual and artistic crafts, and also in ordinary literary training. Under the latter head will be comprised sets of ordinary exercises, note-books, and examination papers, illustrative of the actual work done in the different schools and colleges represented. The Exhibition will also include a number of portraits and busts of great historical and artistic interest, representing many of the great men and women who have been identified with educational progress, and also a number of antiquarian treasures from the great public schools. Among other memorials of peculiar interest may be mentioned the original moral philosophy papers shown up by Mr. Gladstone in the Schools at Oxford. The Exhibition has been supported, most warmly and generously by the great

institutions of the country, and visitors may expect to enjoy the sight of a quite unique collection of objects of educational value and interest. The expert who desires to test and compare the work of our schools of every grade and type will have the fullest materials on which to work; and the ordinary citizen, to whom a school note-book is anything but attractive, will be able to gratify his artistic interests, to glean some trifles of historical knowledge, and even to satisfy his curiosity by the spectacle of an educational cinematograph. Arrangements are being made by many educational bodies for holding a series of meetings, conferences, and lectures on educational subjects at the Imperial Institute during the period of the Exhibition. One section of the Exhibition will be devoted to the display of the works of educational publishers and commercial firms connected with education.

PROF. HENRY E. ARMSTRONG deprecates, in a letter to the *Times*, the suggestion that the Science and Art Department should relinquish its hold on secondary schools:—

The great fault to be remedied in our system—whether primary or secondary—is its excessively bookish and academic character; the inspectors of the Education Department have been for the most part University men—often well read but nothing more. . . . The inspectors of the Science and Art Department, on the other hand, of late years at least, have been forced into contact with practical affairs, and the spirit of research which dominates and constitutes science has of necessity influenced their work; moreover, they have considerable experience of secondary schools, their presence having been welcomed in many of these, as the Department has had money to dispense, whilst the operations of the Education Department have been almost entirely confined to elementary schools.

Prof. Armstrong insists also on the need for stricter discipline in schools, and declares that, if the Government had appreciated the gravity of the position of this country in the matter of education, a wider and more representative Committee would have been appointed to reform the Department.—Mr. D. R. Fearon, C.B., Secretary to the Charity Commissioners, has been added to the Organizing Committee.

EARLY in the month, at a meeting in the lecture theatre of the Victoria and Albert Museum, Sir John Gorst, on behalf of some five hundred subscribers, presented a testimonial to Sir John Donnelly, on his retirement from the Science and Art Department. Sir John Gorst said that he had been a colleague of Sir John Donnelly about four years, and had received from him on all occasions the most loyal co-operation, which had been enhanced by a very strong personal friendship. About three years ago an attack was made ostensibly on the Department of which he was the head, but it really had a considerable amount of personal animus in it. There was an inquiry, by a Committee of the House of Commons, in which Sir John Donnelly was virtually put upon his trial, and he could only say that, in the opinion of his official chiefs—the Duke of Devonshire's opinion was the same as his own—from that inquiry Sir John Donnelly emerged with the conclusion in the minds of those who had read the evidence, that he had been a most loyal servant of the Department, that his administration of the Department had deserved the approbation of the country, and that the insinuations made against him were absolutely baseless.

THE inaugural dinner of the Bristol University College Colston Society was held at Clifton on December 7. The chair was taken by the Bishop of Hereford, and the guest of the evening was Mr. Bryce, M.P. Mr. Bryce said that among all the triumphs and laurels of progress, on which two years ago they were meditating when they celebrated the sixtieth anniversary of the Queen's reign, there was nothing of which on the intellectual and moral side they might be more proud in England than of the progress their Universities and colleges had made.

They ought not to seek to bind down institutions like this, which were intended to flourish and grow for all time, by giving a college any special direction which would prevent its freest development. A new institution was, of course, bound to lay hold of those lines of activity which would most bring it into connexion with the practical life of to-day, and give it the largest hold on the practical interests of the people amongst whom it worked. They had not yet, much as had been done by some of the University colleges in some of the cities, reached the

limit of the practical utility and value in municipal life which these colleges might have. A college might develop a faculty of commerce, and he would be glad if they had the pecuniary resources to see this done in Bristol. There was a great deal to be said for the plan of having several colleges associated in one University. We were on the eve in England of much larger gifts to educational purposes than heretofore, and, to meet the deplorable tendency to centralization, we should have a larger number of independent intellectual centres to give variety and richness in our intellectual life, which it could not have if drawn into one centre.

On December 8, Sir Edward Clarke, M.P., presented the prizes at the annual distribution of the Southwark Evening Continuation Schools, under the London School Board. Sir Edward said that he left school at thirteen, and he never went to a University, so that he exactly understood what boys felt upon leaving school and in wanting to continue their education. It was in the continuation schools that the great hope of the young boy and girl students lay. When a boy left school he was only just beginning to learn, and, unless the opportunity of further education was grasped, the advantage of the school life would absolutely disappear. He found his chance in evening classes for young men in the City of London College and the Church of England Young Men's Society; and the chance of the boys leaving Board schools to-day was in the continuation classes. The capacity for acquiring knowledge was greater between the ages of fourteen and twenty-one than at any other age, and, if these years were wasted, the grandest opportunities for success in life were lost. The great advantage of training in school was not in that which was learned, but in the habit of learning acquired, and the secret of success in life was not in being able to do extraordinary things, but in doing ordinary things extremely well.

THE report of the Association for Promoting the Education of Women in Oxford records that the Delegacy of Local Examinations has issued new regulations for the examination of women. The first examination is discontinued; candidates will, however, be able to qualify for admission to the University examinations through the Oxford Higher Local, through Responsions, the Senior Local, the Joint Board Higher Certificate, or other qualification accepted by the Delegacy. A change has also been made in the Honour Examination in Modern Languages. For the future each student will be examined in one language, instead of two. By this change the examination will be more closely assimilated to the University Honour School of English Language and Literature.

FOUNDERS' DAY was celebrated at the Charterhouse on December 12, when a sermon was preached by the Rev. Dr. Rendall, Headmaster of Charterhouse School. At the close of the service a hundred Old Carthusians dined together in the hall adjoining the chapel. The Master of the Charterhouse (Canon Haig Brown) presided, having Sir Richard Webster, Bart., M.P., on his left hand, and the Bishop of Rochester on his right. Following the toast of "Church and Queen," Mr. Page, one of the assistant-masters, proposed "The Navy, the Army, and Reserve Forces," paying a tribute to Colonel Baden-Powell, for whose education he was partly responsible, and pointing out that among the dead Carthusians was Colonel Keith Falconer, who had added his name to the roll of heroes. The Master, in proposing "Florent æternum Carthusiana domus," said that eighty-eight Old Carthusians were now fighting in South Africa. Sir Richard Webster, in replying to the toast of "The Governing Body," extolled the work accomplished for the good of the school by Canon Haig Brown.

LORD RUSSELL OF KILLOWEN (Lord Chief Justice of England) presented the prizes to the successful students at the Rutlish School of Science, Merton, on December 12. The school was built by means of funds bequeathed for local charitable purposes by Mr. William Rutlish, who flourished in the reign of Queen Elizabeth. The Charity Commissioners were responsible for the scheme, having handed over to the Rutlish Trustees an amount sufficient to provide the fabric. The building was completed and opened to students three years ago, and subsequently subsidized by the Surrey County Council. Lord Russell, in the course of his address, said it was originally designed that the proceeds of the benefaction should be used for the advancement, by apprentice-

ship, of youths in the district, but it had been found in recent years that the money could not be properly applied to that object.

He would, however, interpolate the observation which he had made before, and which he had heard others more experienced than himself endorse, that, whatever the reason for it, the decay in the practice of apprenticing to the trades and handicrafts was a public loss and a public evil. He very much doubted whether, under existing conditions, we were producing in these days a class of handicraftsmen as well qualified, in at least the mechanical part of their business, as in former times.

FURTHER ON, referring to the new Board and to the organization of secondary education, Lord Russell said:

No doubt there was room, under the powers of an act of Parliament, by means of a Board of Education, to systematize, to bring into line, the whole character of the education of the country, preventing leakage and waste, and bring up the system to the level of the requirements of our time. He doubted not that much could be done in that respect. While he said that, he by no means desired to see a stereotyped system of teaching and a stereotyped set of books to be taught all over the country. He thought the voluntary effort of education played in this connexion a very important part. It prevented absolute sameness and uniformity in the system of teaching, so that boys were not turned out of school as sausages were turned out of a sausage machine—of exactly the same weight and the same length—but the same play was left to individual character and to individual teaching, which presented not only a pleasing, but a wholesome, variety of teaching.

PROF. FORSYTH, of Cambridge, gave an address on "The Aims of Education" at the prize distribution of Liverpool College. Principal Dyson claimed Prof. Forsyth (who was Senior Wrangler) as an old student of the college. He also referred to the departure of the Rev. H. de B. Gibbins, the Headmaster, to take up the appointment of Headmaster of Kidderminster Grammar School. During the four years Mr. Gibbins had been connected with the college, the number of scholarships had greatly increased, as well as the number and quality of successes and other distinctions. Mr. Gibbins's successor was the Rev. W. Hardman, M.A., senior assistant-master at Hammersmith Godolphin School. Prof. Forsyth dwelt on the value of education as a preparation for conduct in life, alike in its business, in its interests outside the business of life, and in the use of the leisure of life.

Public opinion was sometimes apt to look upon technical education as replacing education; whereas it was its supplement, and could be given very much better when a real and broad foundation had already been laid, such as was given in the grammar school and the commercial school. The aims of education were to teach acquisition, discipline, and culture. The standard and means might be different, but the object and spirit and ideal were one—to develop the faculty of reasoning, then the faculty of observation, and afterwards the faculty of expression. He urged that the teaching of English composition should be more largely practised, and remarked that the study of the geography and history of the British Empire would be far more useful to the nation than much of the music-hall patriotism of which we got so much nowadays.

At a recent meeting in Edinburgh of the Secondary Teachers' Association, Dr. J. Strachan read a paper on "Home Lessons from a Medical Point of View." Dr. Strachan expressed the conviction that home lessons were an evil, and ought to be discontinued.

His chief objection against the imposition of home lessons was that they were an addition of one, two, or more hours to the school day, which, in his opinion, was already too long. Home lessons always fell to be learned at a time of night when the young mind had not the capacity for the work, and that attempt to over-rule Nature was productive of great evil. He expressed disapproval of punishment and prizes, holding that the fear of the former and the desire for the latter were the cause and source of such serious school delinquencies as lying, cheating, copying, and cribbing, which could not but have a most pernicious effect on the future. As regarded the effect of home lessons on the health of the children, he intimated the impaired eyesight resulting from severe study in youth, and contended that the great prevalence of insanity had also a significance in this connexion, and ought to give pause to those in authority who were piling on motives for pressure in brain work.

In the discussion that followed, Mr. McDonald (Daniel Stewart's College) thought Dr. Strachan's arguments only applied to injudicious home lessons, while Miss Hunter (Secretary) said the

British parent would not do without home lessons for his children.

PROF. ANWYL, of Aberystwyth, gave an address on "Education" on the annual speech day of Llanidloes Intermediate Schools. He said that very often it was as difficult to understand men's words in English as in a strange tongue. As life advanced it became fuller of complex situations and of those crises where a strong mind was required to direct one in the true path.

If a man was to live in this complex civilization of ours, he must be strengthened from the very earliest years of life to keep cool in the face of difficulty, and to be able to decide rapidly and work energetically. Therefore he thought that the work done by children in school should very largely be directed towards strengthening the powers of the mind, whether it were by the study of a dead and difficult language or the attempt to wrestle with a knotty problem in science or mathematics. But the discipline of education was not simply the discipline of the understanding. It meant also the training of the judgment, the love of what was right, and the determination to follow what was right. A great element in school life was the opportunity it afforded for training character. The battling out of life's difficulties in youth by children with those of their own years was a most excellent preparation for the work of life. But, before school life could have its proper influence upon a child's character, the child must be allowed to stay longer in school. He thought those parents who prematurely withdrew their children from school did them a very great injustice.

In connexion with the new University of Birmingham, a deputation was appointed to visit the United States and Canada, with the view of inquiring into the working of some of the leading Universities. When Mr. Andrew Carnegie made his donation of £50,000 he suggested that some of the features of the American Universities should be incorporated in the proposed Birmingham University, and Mr. G. H. Kenrick, Prof. Poynting (Professor of Physics), and Prof. Burstall (Professor of Engineering at Mason University) were deputed to make the necessary inquiries. They left Birmingham on November 1, and have visited the Cornell University, the Massachusetts Institute of Technology at Boston, the McGill University at Montreal, and all the leading colleges and schools in Chicago, Baltimore, Pennsylvania, and the United States generally, concluding their tour at New York. The deputation will present a report to the University Committee, embodying their views.

DR. J. J. FINDLAY, in his report to the Governors of the Cardiff Intermediate School for Boys, refers to the "house system" which he has established since his appointment as Headmaster:—

We are holding fast to the principles on which it is based, and which were originally due to the genius of Dr. Perceval (the present Bishop of Hereford) when Headmaster of Clifton, but we are letting our house life grow from term to term on lines adapted to our needs. It is certainly exercising a pronounced influence upon the character of our boys; it is adapted to boy nature; it develops the best qualities of public spirit and unselfishness; it represses those narrowing tendencies of caste which, in many towns, have alienated the grammar school from civic interests; in short, it recognizes the life of a school as that of a vigorous corporate society. All this, we are well assured, is already felt and appreciated by our parents, and will be realized far more as time goes on. Naturally enough this social life finds its most energetic outlet in school games, and among the best fruits of the "house" system must be reckoned a healthy tone relating to all matters of athletic and physical exercise. The deplorable excesses to which sports often nowadays lead are here checked at the outset; on the other hand, the temptation to sedentary habits is overcome by habituating our boys to delight in open-air pursuits.

THE report of the Governors of Holloway College for 1898-9 states that the number of students in residence during the session, taking the average of the three terms, was 111. The average of 1887-8 (the first year of the college) gave less than thirty-three students. The list of University honours won in the course of the past year includes Firsts in Mathematical Moderations, the Final Mathematical School, English and Modern Languages (Oxford), as well as a First in French (London). The places on the Governing Body void by the resignation of Mr. R. C. Christie and Sir M. Grant-Duff respectively have been filled by Prof. F. W. Oliver, whom the Senate of the University of London appointed, and Dr. A. W. Ward, co-opted by the Governors.

THE

## Educational Review.

*An important new feature will be the introduction of an article in each issue on one of the subjects set for the Oxford and Cambridge Local Examinations.*

CONTENTS FOR JANUARY, 1900.

### Notes and Topics.

**Articles:** Technical and Secondary Education. By WILLIAM GARNETT, Secretary to the Technical Education Board of the London County Council.—The Cambridge Junior Local Syllabus. I. Arithmetic. By W. P. WORKMAN, M.A., Headmaster of Kingswood School, Bath.—How I Learnt to Teach. III. By CLOUDESLEY BRERETON, M.A., L.ès L.—Chataqua.

**University Letters:** Oxford, Cambridge, and London.

**Reviews of New Books.**

**List of New Books.**

**Announcement of a Five-Guinea Prize for the best List of Books for the Cambridge Junior Local Examination.**

Published on the 10th of each month.

Price 4d. By post, 5d. Annual Subscription, 5s. post free.

LONDON:

At the Office of the Educational Review,  
203 STRAND, W.C.

## Recent Publications.

**The Navy League Map of the World.** 21s.

**Illustrations of Plants of Commerce.** Eleven in Series. 3s. 6d. each.

**The Howard Vincent Map of British Empire.** New Edition. 21s.

**Artistic Colour and Brush Work.** Two Sets. 5s.

**Sewing and Knitting Diagrams.** Seven in Series. 3s. 6d. each.

**Wall Chart of Personal History of our Lord Jesus Christ.** 7s. 6d.

**Illustrations of Geometry.** Sheets 1 and 2 ready. 7s. 6d. each.

**Large Wall Maps of Africa and South Africa.** New Edition. 12s. each.

**Britain On and Beyond the Sea.** Handbook to Navy League Map. 1s. 6d.

**Unrivalled Atlas.** New Edition. 3s. 6d.

**Series of Cooking Diagrams.** Six in Series. 3s. 6d. each.

**W. & A. K. JOHNSTON,** GEOGRAPHERS TO THE QUEEN,  
EDUCATIONAL & GENERAL PRINTERS,  
EDINA WORKS, EASTER ROAD; AND 20 SOUTH SAINT ANDREW STREET,  
EDINBURGH.  
5 WHITE HART STREET, WARWICK LANE, LONDON, E.C.

# MACMILLAN & CO.'S NEW EDUCATIONAL BOOKS.

## MACMILLAN'S MANUALS FOR TEACHERS.

**THE LOGICAL BASES OF EDUCATION.** By J. WELTON, M.A., Professor of Education in the Yorkshire College, Victoria University. Globe 8vo, 3s. 6d.

\* \* \* This Book meets the Requirements of the Teachers' Certificate Examination.

**THE CYNTHIA OF PROPERTIUS.** Being the First Book of his Elegies. Done into English Verse by SEYMOUR GREIG TREMENEHERE, one of H.M. Inspectors of Schools. Crown 8vo, 4s. net.  
*Spectator*.—"Mr. Tremenehere has, we think, achieved a decided success in a very difficult task. . . . An uncommonly readable translation."

### MATHEMATICS AND SCIENCE.

BOOKS I-IV. NOW READY.

**Euclid's Elements of Geometry.** Edited for the use of Schools by CHARLES SMITH, M.A., and SOPHIE BRYANT, D.Sc. Globe 8vo. Books I-IV, 3s. Book I, 1s. Books I and II, 1s. 6d. Books III, and IV, 2s.  
*School Guardian*.—"A handy and well-arranged edition. . . . Useful collections of interesting and important problems and theorems are added at the end of the text proper of each book, together with sets of exercises of some difficulty, while easier exercises are appended to the various propositions themselves. The diagrams are clear, and the varieties of type carefully chosen; indeed, the whole appearance of the pages is a model of what a geometrical text-book should be."

**Experimental Science (PHYSIOGRAPHY, Section I).** An Elementary Course of Physics and Chemistry adapted to the Syllabus of the Science and Art Department. By Professor R. A. GREGORY and A. T. SIMMONS, B.Sc. Lond. Globe 8vo, 2s. 6d.  
*Educational News*.—"We have much pleasure in calling the attention of students to this excellent manual."

PART II. NOW READY.

**Exercises in Practical Physics for Schools of Science.** By Professor R. A. GREGORY and A. T. SIMMONS, B.Sc. Lond. In Two Parts, Globe 8vo, 2s. each.

**Chemistry for Organized Schools of Science.** By S. PARRISH, B.Sc., A.R.C.S. Lond. With Introduction by D. FORSYTH, M.A., D.Sc. Globe 8vo, 2s. 6d.

*Educational News*.—"Will be found of great service to students of elementary chemistry working on the new Science and Art Syllabus. . . . As a laboratory guide, the volume will be found particularly useful. The experiments are varied and suggestive. The illustrations are well done. We cordially commend the work to students of the elementary stage and their teachers."

### FRENCH.

**A Historical French Grammar.** By Professor ARSÈNE DARMESTETER. Edited by Professor ERNEST MURET and Professor LEOPOLD SUDRE. Authorised English Edition by Professor ALPHONSE HARTOG. Crown 8vo, 12s. 6d.

*Educational Times*.—"MM. Muret and Sudre have done their work very thoroughly. . . . The outcome appears to be eminently satisfactory."

**Siepmann's Elementary French Series.**

**Verne.—Le Tour du Monde en Quatre-Vingts Jours.**

Par JULES VERNE. Adapted and Edited by LOUIS A. BARBÉ, B.A., Headmaster of the Modern Language Department in the Glasgow Academy. Authorised Edition. Globe 8vo, 2s.

*Educational Times*.—"Deserves praise. The tale is well known, and will be eagerly read, for there is enough action to satisfy the most high-spirited boy. He will be grateful that the Editor has written brief notes and supplied a vocabulary from which he can get all the help he is likely to require."

**Siepmann's Advanced French Series. New Volumes.**

**About.—Le Roi des Montagnes.** Adapted and Edited by ERNEST WEEKLEY, M.A., late Scholar of Trinity College, Cambridge, Professor of French at the University College, Nottingham. Globe 8vo, 2s. 6d.

*Guardian*.—"Professor Weekley has provided it with a good set of the sort of exercises which have made the earlier numbers of Siepmann's Series so well known and popular. His notes show the hand of the scholar and the teacher, and his introduction is commendably brief and to the point."

**Coppée.—Contes Choisis.** Par FRANÇOIS COPPÉE, de l'Académie Française. Edited by MARGARET F. SKEAT, late Student of Newnham College. Globe 8vo, 2s. 6d. WORD AND PHRASE BOOK, sewed, 6d.

*Educational Times*.—"Miss Skeat is to be congratulated. . . . She has chosen her stories well, and given infinite pains to rendering the notes complete, and the vocabulary helpful. . . . The vocabulary is an excellent piece of work."

**Vogüé.—Cœurs Russes.** Edited by EUGÈNE PELLISSIER, Professeur Agrégé au Lycée du Havre. Globe 8vo, 2s. 6d. WORD AND PHRASE BOOK, sewed, 6d.

*Schoolmaster*.—"The book is got up in the most thorough fashion."

PART III. NOW READY.

**A Three-Year Preparatory Course in French.** Covering all the Requirements for Admission to Universities, Colleges, and Schools of Science. By CHAS. F. KROECH, Professor of Languages in Stevens Institute of Technology. Crown 8vo. First and Second Years, 3s. 6d. each. Third Year, 5s.  
*Educational Times*.—"We should like every teacher to buy it for himself. . . . We welcome Professor Kroech's book heartily, and wish it many readers."

### HISTORY.

**A History of England for High Schools and Academies.** By KATHARINE COMAN, Ph.B., and ELIZABETH K. KENDALL, M.A. Crown 8vo, 7s. 6d. net.

**French History for Schools.** By KATHARINE STEPHEN, Vice-Principal of Newnham College, Cambridge. With Coloured Maps. Globe 8vo, 3s. 6d.

*Educational News*.—"Illustrated by nine excellent, useful Maps, and furnished with a copious and valuable Index of twenty-eight columns. The History is exceptionally good."

**Syllabus of a Course of Eighty-Seven Lectures on Modern European History (1600-1890).** By H. MORSE STEPHENS, Professor of Modern European History in Cornell University. Extra crown 8vo, 8s. 6d.

**CAMBRIDGE LOCAL EXAMINATIONS, 1900.**

**The Gospel according to St. Luke.** THE GREEK TEXT. With Introduction and Notes. By Rev. J. BOND, M.A. 2s. 6d.

**The Acts of the Apostles.** AUTHORISED VERSION. With Notes. By T. E. PAGE, M.A., and Rev. A. S. WALPOLE, M.A. 2s. 6d.

— THE GREEK TEXT. With Notes by T. E. PAGE, M.A. 3s. 6d.

**Shakespeare.—As YOU LIKE IT.** With Introduction and Notes. By K. DEIGHTON. 1s. 9d.

**Scott.—MARMION.**—With Introduction and Notes. By M. MACMILLAN, B.A. 3s.; sewed, 2s. 6d.

**Milton.—PARADISE LOST.** Books III. and IV. With Introduction and Notes. By M. MACMILLAN, B.A. 1s. 3d. each; sewed, 1s. each.

**Merimée.—COLOMBA.** Edited by G. E. FASNACHT. 2s.

**Goethe.—HERMANN UND DOROTHEA.** With Introduction and Notes. By J. T. HATFIELD. 3s. 6d.

**Virgil.—ÆNEID.** Book VI. With Notes and Vocabulary. By T. E. PAGE, M.A. 1s. 6d.

**Cæsar.—DE BELLO GALLICO.** Book VI. With Notes and Vocabulary. By C. COLBECK, M.A. 1s. 6d.

**Horace.—EPISTLES AND ARS POETICA.** Edited by A. S. WILKINS, Litt.D. 5s.

**Livy.—BOOK XXI.** With Notes and Vocabulary. By W. W. CAPES, M.A., and J. E. MELHUIS, M.A. 1s. 6d.

**Cicero.—DE SENECTUTE.** With Notes and Vocabulary. By E. S. SHUCKBURN, M.A. 1s. 6d.

**Xenophon.—ANABASIS.** Book V. With Notes and Vocabulary. By Rev. G. H. NALL, M.A. 1s. 6d.

**Euripides.—HECUBA.** With Notes and Vocabulary. By Rev. J. BOND, M.A., and Rev. A. S. WALPOLE, M.A. 1s. 6d.

**Thucydides.—BOOK III.** Edited by E. C. MARCHANT, M.A.

[In Preparation.]

## CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

*School Guardian*.—"Exact and scholarly, and at the same time simple, text-books. The University Press are to be congratulated upon having secured as editors such eminent scholars; their names are a guarantee of their work. We are quite sure that the students preparing for the Queen's Scholarship and Certificate Examinations will not be the only students who will find these text-books of value; they will find their way into numberless preparatory schools and lower forms of public schools; they deal so thoroughly and clearly with the subject in each case that nothing better could be desired by master or pupil. Among others, there is this immense advantage: each volume is its own note-book and dictionary; the student, having elementary his knowledge, needs only the book in hand and a simple grammar."

The following editions have COMPLETE VOCABULARIES.

AUTHOR.	WORK.	EDITOR.	PRICE.
<b>Caesar</b> .....	De Bello Gallico, Books V. and VI.	E. S. Shuckburgh	each 1 6

## FORECASTS AND COMMENTS.

January 1, 1900.

THE Half-yearly General Meeting of members of the College of Preceptors will be held at the College on Saturday, January 20, at 3 p.m.

\* \* \*

THE Annual Dinner of members and their friends, which was to have taken place on the day of the Half-yearly meeting, has been suspended for the present year.

\* \* \*

As previously announced, there will be no Winter Meeting at the College this year.

\* \* \*

THE Examination of teachers for the Diplomas of the College will begin to-morrow, January 2.

\* \* \*

THE preparations for the English Education Exhibition are now complete. The Prince of Wales has consented to open the Exhibition—which is to be held at the Imperial Institute—on Friday, January 5. The lectures and conferences on educational subjects which have been arranged to take place at the Institute during the continuation of the Exhibition will extend over three weeks.

\* \* \*

A CONFERENCE of members of the College and of heads of schools sending in their pupils to its local examinations will be held in the Conference Hall of the Imperial Institute on Saturday, January 6. The subject of discussion will be the formation of a register of efficient secondary schools, whether by Central or Local Authority.

\* \* \*

THE subject will be introduced by R. Wormell, Esq., D.Sc., M.A., F.C.P., and papers will be read "On the Essentials of Sanitary School Premises," by Arthur Newsholme, M.D., F.R.C.P., D.P.H. (Lond.), Medical Officer of Health for Brighton; "On Examination Tests, Oral and Written," by H. L. Withers, Esq., M.A., Professor of Education at Owens College, Manchester; "On Oral Examinations as conducted in France," by Miss E. Williams. The sanitary sufficiency of school premises, the adequacy of the teaching staff and appliances for teaching, &c., will form the subject of discussion at the morning sitting—from 11 a.m. to 1 p.m. The question of examinations (oral and written) as a means of testing the results of the teaching will be discussed at the afternoon sitting—from 3 to 6 p.m. All teachers, whether members of the College or not, are invited to attend, and to take part in the discussion.

\* \* \*

THE annual meeting of the Private Schools' Association will be held on January 12, in the rooms of the College of Preceptors.

\* \* \*

At the Royal Institution, Mr. C. V. Boys, F.R.S., will continue his course of Christmas lectures on January 2, 4, 6, and 9. The subject is: "Fluids in Motion and at Rest."

\* \* \*

At University College, London, the Faculty of Medicine resumes work on January 3, the Slade School on January 8, the Faculties of Arts, Laws, and Science on January 16. Prof. Foxwell's lectures begin on the 16th, Prof. Ker's on the 17th, Mr. Stopford Brooke's on the 18th, Prof. Sully's on the 19th, Prof. Housman's on the 23rd, and Prof. Gardner's on the 29th.

On January 31 Prof. Butler begins a course on Macchiavelli, and on February 7 Dr. Moore gives the first of twelve lectures on Dante.

\* \* \*

THE Association of Principals and Lecturers in Training Colleges under Government Inspection holds its eighth annual general meeting at the Imperial Institute on January 11 and 12. The Bishop of London will deliver an address on the Thursday afternoon.

\* \* \*

THE Lent Term of the London School of Economics and Political Science will extend from January 16 to March 26. There will be sixteen special courses confined to full students of the school, the lecturers including Prof. Hewins, Mr. Cannon, Mr. C. P. Sanger, Mr. A. L. Bowley, Mr. G. Lowes Dickinson, Mr. E. A. Whittuck, and Mr. Hubert Hall. There will also be twenty-five supplementary courses, including one on "The Development of the Machinery of Education in England," by Mr. Wallas, beginning on January 22.

\* \* \*

THE Modern Languages Holiday Courses Committee of the Teachers' Guild announce that it has been decided to repeat the courses at Lisieux and Tours in August, 1900. The encouragements to revisit Lisieux are numerous and great. The Committee believe that the Tours course will gradually grow in favour, in spite of the greater distance of that city. The courses will be of the same duration as in 1899, viz., at Lisieux twenty consecutive week-days, omitting French general holidays; and at Tours three weeks, with an extension to four weeks, if desired. It has been arranged to open a third course of twenty days in 1900 at Elbeuf (on the Seine, near Rouen), where the Committee will have the advantage of the presence of M. Léon, late Secretary of the French Committee at Lisieux, as local organizer. The representatives of the English Committee for the courses in 1900 will be—at Lisieux: E. Buck, Esq., M.A., St. Edmund's School, Canterbury; at Tours: S. de Ste. Croix, Esq., M.A., St. Edmund's School, Canterbury; and at Elbeuf: E. W. Hensman, Esq., M.A., Headmaster of the Rawlins School, Quorn, Loughborough. There will be an examination at the end of the courses at Lisieux and Elbeuf, arranged by a body independent of the Guild.

\* \* \*

THE jubilee of the North London Collegiate School and the Camden School for Girls will be celebrated on April 4. A service of thanksgiving and commemoration will be held in St. Paul's Cathedral on the eve of the anniversary, and the following day will be celebrated as a day of jubilee, with receptions to parents, old pupils, and friends.

\* \* \*

NOTICE has been given by the Vice-Chancellor of Cambridge University that ten Stewart of Rannoch Scholarships, each of the value of £25 a year and tenable for three years, will be offered for competition in May. Four of these are open, two being for proficiency in Hebrew, and two in sacred music. The other six are for natives of Wilts, Somersct, Gloucester and Bristol.

For the January Examination of teachers for Diplomas of the College of Preceptors there are 263 candidates, which is an increase of 53 on the number entered in January, 1899. At the Midsummer examination the number was 176, the total for the year being 433.

\* \* \*

THE provision of facilities for secondary training and for the examination and graduation of students of pedagogy in the University of London has been the subject of much discussion during the past few months. It is not anticipated that the Statutory Commission will advise the creation of a Faculty of Education; but we understand that a Joint Committee will watch the course of events in the interest of the various bodies already concerned in the training of secondary teachers.

A CONFERENCE of representatives from the principal London colleges was held recently, at the instance of the Royal College of Science, with a view to keep before the London University Commission some recommendations in the report of the previous Commission. It is hoped, the *Athenæum* says, that these will find their place among the instructions to the future Senate. The most important is the provision that the colleges may separately examine and certify their own students at the earlier stages, while the final examinations for degrees must be the same for all.

\* \* \*

WHAT is a "high school?" The Bishop of Manchester, distributing prizes at the Whalley Range Higher-Grade School, said that he did not generally care about criticizing terms in current use, but he might say frankly that he did not much like the titles "high school" or "higher-grade school," because their opposites were low school or lower-grade school. "Those words certainly had a suspicion of the implication of inferiority, and he believed it was better to take a more democratic title, and talk of primary schools and secondary schools, inasmuch as primary only implied priority and not inferiority." We fear it is a case of "vitia in contraria currunt." "Primary" and "secondary" are engaged. There is some fine promiscuous criticism for any one who will go into the whole subject of educational nomenclature.

\* \* \*

THE latest concession to Ireland has had a curious reflex action on England. The Education Department recently decided to recognize as valid the certificates held by Irish elementary-school teachers, whose qualifications, as a whole, are inferior to those of English-trained teachers. Taking advantage of this change in the Code, says the *Schoolmistress*, the managers of St. Mary's Roman Catholic Schools, Bradford, have dismissed the whole of their teaching staff, and have appointed in their places members of the Christian Brotherhood.

\* \* \*

THE first act of Lord Strathcona and Mount Royal as Lord Rector of Aberdeen was to move (and secure) the adoption of the University Extension scheme, which involves the removal of the old Greyfriars Church, and its rebuilding on a neighbouring site. This has been a question of considerable difficulty for some time past.

\* \* \*

ON December 15 the Archbishop of Canterbury laid the foundation stone of new buildings for the King's School, Canterbury, which is the oldest public school in the country.

\* \* \*

THOUGH the new scheme for Lady Holles's School has not been formulated by the Charity Commissioners, the *City Press* hears that, in certain respects, a decision has been come to. The school in the past has been of the standard of a National school; but in the future Lady Holles's Trust will be associated with a school for the middle classes. Consequently the money that has hitherto been devoted to the clothing and feeding of a certain number of the pupils will no longer be required for the purpose. It has, therefore, been decided by the governing body to utilize the income for the foundation of scholarships to enable deserving pupils, at the close of their school career, to continue their education at secondary schools. This utilization of the money is certainly the best possible.

\* \* \*

MR. W. H. CUMMINGS, Principal of the Guildhall School of Music, presided recently at a conference held at the Guildhall School of Music to consider the question of the teaching of class-singing and sight-singing in secondary schools. The conveners of the meeting hold that no girl or boy can be considered properly educated who, at the age of fourteen or fifteen, is unable to sing at sight an easy song or tune from the five-line staff.

\* \* \*

ENTHUSIASTS are already filling up the programme of inter-

Education  
Gossip.

national and inter-University sports for 1900. The Athletic Association of the University of Pennsylvania will send a team to take part in the "Olympic Games" at the Paris Exposition, and in the contests in London, where they will compete with Oxford and Cambridge athletes.

Appointments and Vacancies. SIR HUBERT PARRY has been appointed Professor of Music in the University of Oxford, in succession to Sir John Stainer. Sir Hubert is the author of "The Art of Music," and of many articles in Grove's "Dictionary." He is a popular and characteristically English composer.

MR. ARTHUR ANTHONY MACDONELL, M.A., Taylorian Teacher of German in the University of Oxford, has been appointed to the Professorship of Sanscrit, in succession to the late Sir Monier Monier-Williams, for whom he had acted as deputy. Mr. Macdonell took the degree of Ph.D. at Leipzig with a Sanscrit dissertation. In addition to Classical Honours at Oxford, he gained the Taylorian Scholarship in German (1876), the Davis Chinese Scholarship (1877), the Boden Sanscrit Scholarship (1878), and was appointed Teacher of German in 1880. He is the author of numerous works on Sanscrit philology and Vedic mythology.

THE Council of King's College, London, have appointed Prof. N. J. C. Tirard to the Chair of Medicine, vacant by the resignation of Prof. J. Burney Yeo, M.D., and Dr. W. A. Turner to be an Assistant Physician at King's College Hospital.

At Cambridge the appointment by the Board of Agricultural Studies, in consultation with the President of the Royal Agricultural Society, of Sir E. Clarke, Hon. M.A. St. John's, as Gilbey Lecturer on the History and Economics of Agriculture for one year was confirmed. The Board of General Studies was authorized to appoint Mr. H. Woods, M.A. St. John's, as University Lecturer in Palaeontology for five years.

ARCHDEACON WYNNE has been selected as Donnellan Lecturer at Dublin for the year 1900-1.

MR. A. W. W. DALE, son of the late Dr. Dale, of Birmingham, a member of the Council of the Senate and of the Board of Examinations at Cambridge, has accepted the position of President of Liverpool University College, in succession to Dr. Glazebrook.

MR. E. TAYLOR JONES, D.Sc., has been appointed Professor of Physics in Bangor University College, in succession to Prof. Gray.

DR. ADOLF NEUBAUER, M.A., Hon. Fellow of Exeter, has resigned the post of Sub-Librarian of the Bodleian, which he has held since the year 1873. During that time he has been in charge of the Oriental department, and he is well known as an Oriental scholar. Mr. A. E. Cowley, M.A., who has been acting as Dr. Neubauer's substitute, is nominated to succeed him as Sub-Librarian.

SIR WILLIAM C. MACDONALD, of Montreal, has founded a Chair of Geology for McGill University, in that city, as a memorial of the late Sir William Dawson, whose contributions to the science of geology are well known. According to the terms of the gift, the income of the endowment will be paid to Lady Dawson during her lifetime, and on her death will become available for the maintenance of the new Chair.

DR. SAVAGE has been appointed Lecturer in Bacteriology at Cardiff University College.

MR. W. F. COOPER, Clare College, Cambridge, has been nominated by the Special Board for Biology and Geology to occupy the University table at the Zoological Station at Naples until February 1. The same Board have adjudged the Walsingham Medal to H. H. W. Pearson, B.A. Caius, and J. Bancroft, B.A. of King's College.

THE REV. FELTRIM E. DUCKWORTH, M.A. Selwyn College, Cambridge, late assistant-master of Rossall School, has accepted the Headmastership of Fermoy College, county Cork, vacant by the death of the late Rev. Frank Stonham, M.A.

MR. COOKE, M.A. of King's College, Cambridge, succeeds Mr. Kennedy as Headmaster of Aldenham School.

MR. WILLIAM HENWOOD, M.A. of Queens' College, Cambridge, who for the past five and a half years has held a mastership at the Wyggeston School, Leicester, has been elected Headmaster of Needham Market Grammar School, Suffolk.

A VACANCY is created in the (joint) Rectorship of the Aberdeen Grammar School by the resignation of Dr. Moir.

WE omitted last month to record the appointments of Mr. T. Read as Headmaster of Brighton Grammar School, and of Mr. E. J. Vic, B.A., as Headmaster of the Bluecoat Endowed School, Stockton-on-Tees.

OWING to the retirement of Miss Dugdale, the Provost and Fellows of Denstone College have appointed Miss Marcia Alice Rice, of St. Hugh's Hall, Oxford, and the Godolphin School, Salisbury, to be Headmistress of St. Anne's, Abbots Bromley, one of the Woodard Schools for Girls. Miss Rice has taken a full "University" course at Oxford, where she obtained a First Class in the Final Honours School of English Language and Literature.

THERE is a vacancy for a Lecturer of English in the Lyceum attached to Malta University. A Roman Catholic will be preferred. Applications up to January 5 to the Director of Education, Malta.

Literary Gossip. It is always satisfactory to hear of the offer of substantial prizes for essays on historical and literary subjects. Competitions of this kind have often enabled clever young men and women to make a mark at the outset of their career. At the last meeting of the Irish Literary Society, the Hon. Charles Russell, as Treasurer of the Society, announced that, thanks to the generosity of one of the Vice-Presidents, Mr. William Gibson, two prizes, one of fifty, the other of twenty, guineas, open to general competition, are offered for the best essays on "The Sieges of Derry and Limerick." Lord Russell of Killowen and Mr. Lecky, M.P., will be the judges in the competition, the conditions of which can be obtained from the Secretary of the Irish Literary Society, 8 Adelphi Street, Strand.

HERE is another competition. The Board of Education of Sierra Leone offer a prize of £20, to be given to the writer of a small history of Sierra Leone which shall be adjudged by a Committee appointed by the Board to be the best submitted to it in public competition and to be suitable as a text-book for use in the schools of the colony, and shall be approved by the Governor for this purpose. If a work is submitted which fulfils these conditions, the preliminary cost of its publication will be undertaken by the Board, the copyright remaining the property of the author, who will receive all profits accruing from the sale of the work when the cost of publication shall have been repaid.

given under the auspices of the Arts Students' Association to the Students in the Faculty of Arts in University College, Liverpool, by Walter Raleigh, King Alfred Professor of Literature." It is published at "The University Press of Liverpool," and is, we believe, the first product of the new press. Prof. Raleigh's subject was "The Study of Arts in a Modern University."

\* \* \*

ON the principle that quality is better than quantity, it is absurd to make little quibbles over the genial epilogue of the Westminster Play. No doubt the quantity of the *a* in *Eboracum* is long; but, if you have to bring "The Belle of New York" into elegiacs, what are you to do? Westminster did as follows:

Adsum, en, Eboraci bella puella Novi.

And again—

O salve Eboraci pulchra puella Novi.

\* \* \*

THE REV. J. O. BEVAN has printed in pamphlet form the Lecture delivered by him at the College of Preceptors in November, of which we printed a summary last month. His new title is: "How to Save our Private Schools; or Suggestions for the Consolidation of Private Schools in the face of the Board of Education Act."

\* \* \*

AT a recent special sitting of the Jersey States a Bill was brought in to allow the optional use of English in the Assembly. Another member introduced a measure declaring English (instead of French) to be the official language of Jersey from May 24 next, the Queen's birthday. Both measures will be discussed when the States meet this month.

\* \* \*

SEVERAL members of the Gaelic League are engaged on the editing of Irish literary texts for publication. Amongst the texts in course of preparation is an edition of the poems of Geoffrey Keating. The editor has gone through about a hundred manuscripts in Trinity College, Maynooth, and the Royal Irish Academy, in order to arrive at a text. The public ought certainly be grateful for such self-sacrificing labours to place within their reach the ancient MS. literature of Ireland.

\* \* \*

"THOMAS AND MATTHEW ARNOLD," by Sir Joshua Fitch, which was published by Mr. Heinemann in his "Great Educators Series," has been for some little time out of print. A new edition revised by the author will be issued shortly, both in its original form and as a separate volume in a special binding.

\* \* \*

ANOTHER work of interest that Mr. Heinemann has in hand is a translation of M. Seignobos' recently finished "History of Europe from 1814 to 1896." The author's aim is to write an "explanatory" history, showing the organization of the various nations and parties, and how the political questions of each age have been solved.

\* \* \*

MR. ALFRED RUSSEL WALLACE, whom the reading public associate chiefly with his contributions to science, has written an introduction to Mathilde Blind's "Ascent of Man," a new edition of which Mr. Fisher Unwin promises in a few days. It is understood that the volume, which contains, by the way, a fine medallion portrait of the poet, will be followed shortly by a selection from Miss Blind's poems.

\* \* \*

EARLY in the new year Mr. Nimmo will publish the first volume, by Prof. Sayce, of "The Semitic Series," intended to present compactly and in popular form the more important facts in the history, religion, government, language, customs, &c., of the Babylonians, Assyrians, and allied Semitic races. The first volume is: "Babylonians and Assyrians—Life and Customs (with special reference to the Contract Tablets and Letters)," by the Rev. A. H. Sayce, Professor of Assyriology at Oxford. Other volumes will follow at regular intervals; each will be complete in itself, and the series, taken as a whole, will neglect no phase of the general results of recent scientific research. The various authors are specialists in their subjects.

For some time past Prof. J. B. Bury has been at work on a "History of Greece, from the earliest times to the death of Alexander the Great." This will be published by Messrs. Macmillan. It is based on original authorities tested in the light of modern research, and is expected to contain the fullest account that has yet been included within the compass of a single volume of the political history of Greece.

### SOME LESSONS FROM THRING'S LIFE.

ON Wednesday, December 6, at the evening meeting of members of the College of Preceptors, Sir Joshua Fitch gave a lecture on "Some Lessons from Thring's Life." Dr. Wormell took the chair. We print a brief summary of this lecture, which will be included in a forthcoming volume of Sir Joshua Fitch's lectures and addresses, to be published by the Cambridge University Press, under the title of "Educational Aims and Methods."

The lecturer referred, in the first place, to the very interesting paper which Dr. Wormell had previously given to the members of the College on "Edward Thring," and spoke of its fullness and practical usefulness. But the character of the Headmaster of Uppingham was many-sided, and there were still some aspects of it which justified further consideration. There was, for example, his effort to rid the University of Cambridge of an anomalous usage, which, though it happened to be of personal advantage to himself, he regarded as unfavourable to the true interests of learning, and unworthy of the University. This was the custom of admitting to a degree without examination the scholars of Eton who were Fellows of King's College. Thring himself fulfilled this condition, and was distinguished both as a classical scholar and as Captain of Montem. But he wrote earnestly against the continuance of this exceptional privilege, and ultimately succeeded in procuring its abolition. His work as a curate in Gloucester, and his strong interest in the elementary schools of that city, awakened in him, not only an unexpected faculty for teaching, but a belief, which he retained through life, that the true principles of education are applicable to all classes of schools, even the humblest; and that the classical master in a great public school might learn much from the methods of instruction and discipline which are adopted in a good National or Board school.

Uppingham, to which Thring went at the age of thirty-two, absorbed the chief energy and activity of his life until the end. In the course of that life he transformed what had been an obscure country grammar school, of no great wealth or repute, into one of the most remarkable and successful public schools in the kingdom, with ample accommodation for three hundred scholars, ten boarding houses, library, laboratories, a gymnasium, workshops, and a noble chapel. From the first he resolutely refused to sanction any increase beyond that number, as he believed that it was indispensable to know all the scholars individually, and that in a larger school such knowledge was impossible. "I have no right," he said, "to take a boy away from his parents unless I can know him well." Thring was fortunate in having several loyal colleagues—notably Mr. J. H. Skrine—who had faith in him, and who made large sacrifices of their own private means, with a view to the erection of boarding houses, and otherwise, to the extension of the school's usefulness. The story of the financial and other difficulties attending his enterprises, as well as of the comparative apathy of the local governing body, have been narrated with somewhat needless fullness by Mr. G. H. Parkin, his faithful friend and biographer. Some characteristic details were, however, cited by the lecturer—in particular, the dramatic incident of the flight for life of the whole school, with thirty masters and their families, to a remote village on the coast of Wales, was described in detail, and shown to furnish a striking illustration of Thring's masterfulness, his readiness of resource, and his power of overcoming difficulties.

With regard to his methods of teaching, some of the most striking features were: (1) his insistence on the value of English grammar as a help in classical instruction, and as providing, with due comparison of Greek and Latin forms, the best discipline in the logic of language; (2) his anxiety to provide for every boy some opportunity for the exercise of any special gift or aptitude which he possessed, so that, in addition to the ordinary and time-honoured discipline in language, history, divinity, and mathematics, there should be provision for drawing and design, for manual training, for the study of music, for physical science, and for natural history; (3) his faith in the possibilities of good, which were to be found in even the least interesting and hopeful

and his conviction that it was the duty of the teacher to discover what each boy was good for, and to find employment for his best faculties; (4) his strong sense of the schoolmaster's work as a religious duty, and of the paramount importance of character-forming as opposed to what he called "knowledge-worship." Many characteristic passages were quoted from Thring's books and diaries, lighted up, as they often were, by grotesque and quaint fancies, but always characterized by deep seriousness, and by a keen and affectionate insight into child-mature, and by a knowledge of the special temptations and difficulties of a school-boy's and of a student's life. Of his extra-scholastic activity many examples were given. He was practically the founder of the Headmasters' Conference in 1849, and was afterwards the first of the heads of great public schools to welcome the Conference of Headmistresses, and to give to them a sympathetic address. His efforts to establish a settlement in one of the poorest parts of London, and the formation of a local society in the town of Uppingham for lectures, reading, and social improvement, and his lectures and addresses to societies of teachers, both in England and in America, all showed him to be a pioneer in some of the most important educational movements of our time, and entitled him to a high and enduring place in the educational history of the century.

### UNIVERSITIES.

(From our Correspondents.)

**Cambridge.** THE end of the October term has been saddened by news of the death of one of the best known and most popular of our residents. After a prolonged period of ill-health, Mr. W. A. Gill, Tutor of Magdalene, and Junior Esquire Bedell, passed away, regretted and mourned by the large number of friends he had gained by his devotion to duty and courtesy towards all those with whom he was brought into contact. Two other losses are to be mentioned, but, in these cases, the causes are happier in their nature: Mr. A. W. W. Dale, Tutor of Trinity Hall, goes to Liverpool to take up the position lately held by Mr. R. T. Glazebrook; while Mr. W. N. Shaw, of Emmanuel, has been chosen to succeed Mr. Scott at the Meteorological Office.

Much dissatisfaction has been caused in Cambridge at the fact that the name of Prof. Moule has been prematurely coupled with the impending appointment to the Bishopric of Liverpool. Unanimous as the feeling is that Dr. Moule's would be an ideal appointment, it is practically established that Press rumours as to episcopal appointments have the effect of putting the candidate out of the running altogether. If, however, in spite of all this, Dr. Moule should be appointed, there is no doubt that from all sections of Churchmen in Cambridge the most hearty congratulations to the worthy Professor would be forthcoming.

The Botanic Garden Syndicate have at last yielded to the dictates of common sense, and issued a new set of regulations for governing admission to the Gardens. For the future, all respectable people are to be admitted from 8 a.m. to dusk, though not later than 8 p.m. during the summer months; but the most important alteration is that smoking is to be allowed, except in the plant houses.

The University three years ago established a Lectureship in the Hausa Language, and, as the period for which the appointment was first made has now expired, it is proposed to renew the experiment. The Hausa Committee have reported that, in consequence of the Government assuming the direct control of the Niger Company's territories, the Hausa language will soon take a definite place in the training of Civil Servants for West Africa: this argument will undoubtedly prevail, and no opposition can with any show of reason be raised to the appointment, as the funds are provided by the Hausa Association.

Rumours are also in the air of changes in the relations of the Army to the University: at present, the encouragement given to men in residence to prepare for the Army is inadequate; the intending candidate is obliged to sacrifice his University career if he wishes to make marks in a Civil Service competition. The result in practice is that the better men prefer to take the certainty of success in a University course to the doubtful chances of an Army examination. It is quite possible that the present enlightened authorities at the War Office will be able to find a solution of the difficulty, and recognize the University tests of literary acquirements as sufficient, while imposing tests of military efficiency similar to those employed with other candidates.

The advanced-student system has already borne good fruit. Dr. Grafton Elliot-Smith, the first of the scientists sent to Cambridge by the Australian Universities, has not only been elected to a Fellowship at St. John's, but has now been appointed to the important post of Demonstrator of Anatomy in the University. The growth of our Medical School proceeds by leaps and bounds; it is the one department of University work which prevents us from earning the reproaches of the educated public. It must not, however, be forgotten that the undeniably high standard set by the medical authorities here has caused considerable grumbling; but there is absolute firmness on the part of those responsible for the present condition of affairs, and there is no fear that our medical degrees will lose their value in the eyes of the public through a decrease in the requirements of the examiners or a laxity in interpreting the rules which govern them.

The scientific researches commenced by the late Prof. Kanchathack on the subject of tuberculosis are now being continued with methodical care by Dr. Sladen and Prof. Woodhead; patient research without fuss or advertisement will be found in the end to produce results of great and permanent value. The important fact to be dwelt on at the present moment is that a comparatively small sum would be necessary now to eliminate from all the herds in England those animals the tuberculous character of which is liable to cause active danger to human life. But Government Departments move slowly, and in the case of the tuberculosis experiments there is no one who has an axe to grind; private enterprise is now beginning what hereafter will have to be completed by public exasperation.

The Carne collection of minerals was recently acquired by the University through the efforts of Prof. Lewis, and the wisdom of the purchase has already been proved by the fact that Mr. A. Hutchinson was able to inform the Philosophical Society at its last meeting of the discovery of a new mineral, which has been named Stokesite, in honour of Sir George Gabriel Stokes: it is a colourless transparent crystal of the prismatic system, and was found on a specimen of Cornish axinite. ¶

The small number of First Classes in the Special Examination Lists shows that the Examiners are resolutely determined to grant this distinction only in cases of real merit. Twenty-one candidates obtain First Classes, and sixteen of these were obtained in the first parts of the respective Specials, leaving five only for the second part, which confers the degree. It is now realized that, for the weaker men, a good poll degree, say a First Class in the General, and a First in each part of the Special, has a considerably higher value than a low Third in most of the Triposes. Whewell Scholarships have been awarded as follows:— (1) H. M. Wiener, Caius; (2) R. W. Seward, King's. Seatonian Prize: Rev. John Hudson, M.A. Peterhouse. Crosse Scholarship: C. T. Wood, B.A. Pembroke.

**Wales.** IN connexion with Welsh education there has been but little of importance to chronicle recently. The

Annual Collegiate Meeting of the University Court was held this year at Bangor, and in conjunction with it the ceremony of conferring the degrees of the University. A meeting of the Guild of Graduates, which had been postponed from last April, owing to the death of the Warden, Mr. T. E. Ellis, was held a short time before the meeting of the University Court, in order to elect the officers of the Guild. The new Warden is Prof. J. E. Lloyd, M.A., a former student of Aberystwyth, and of Lincoln College, Oxford, and now Registrar and Professor of History at Bangor.—The Central Board met this year at Newport, and spent most of the time in private session in the work of drawing up the Annual Report upon the work of the schools for presentation to the Charity Commissioners. The General Report upon the Inspection and Examination of County Schools, which contains information available to the general public, deserves careful study by all who are interested in the future of secondary education. Last year, 93 county schools, under the Welsh Act, were inspected by the Central Welsh Board in compliance with the Treasury regulations. Of these 93 schools, 61 were visited by the Chief Inspector under the Welsh Board (Mr. Owen Owen, M.A.) and 32 by Mr. James Headlam, sometime Fellow of King's College, Cambridge, whom the Board appointed as temporary inspector. In Wales and Monmouthshire there are now 22 schools for boys, 21 for girls, 43 dual schools, and 7 mixed schools. The term "mixed" applied to a school indicates that boys and girls are taught together in the ordinary subjects of the school curriculum. The term "dual" indicates that there are two departments under one responsible head, one department for

boys and one for girls, with separate entrances, class-rooms, and playgrounds for boys and girls respectively; but that the school managers may, if they think fit, make arrangements for boys and girls being taught together in all or any of the classes. In practice, the dual schools of Wales vary very considerably. Some are practically "mixed" schools, while others have almost complete separation of the boys and girls; though in no case is the chief mistress in charge of the girls' department technically a headmistress with separate responsibility for the girls as a whole. The 93 schools which appear on the list are under the charge of 72 headmasters and 21 headmistresses. To the student of secondary education it is interesting to note the following facts with regard to the credentials of the teachers in the county schools of Wales. The headmasters hold degrees as follows:—London, 34; Cambridge, 16; Oxford, 9; London and Cambridge, 4; London and Oxford, 3; Glasgow, 2; Royal University of Ireland, 1; London and Leipzig, 1; London and Strassburg, 1. At present there is one without a degree. The headmistresses hold degrees as follows:—London, 12; Victoria, 1. At present there are three without a degree. The assistant-masters hold degrees as follows:—London, 44; Oxford, 22; Cambridge, 20; Victoria, 8; Wales, 3; London and Wales, 3; London and Victoria, 1; Oxford and Victoria, 1; Royal University of Ireland, 1; Dublin, 1; Durham, 1. There are, at present, 61 without a degree. The assistant-mistresses hold degrees as follows:—London, 54; Victoria, 7; Royal University of Ireland, 2; London and Durham, 1; Wales, 1; Cambridge and Zurich, 1. There are at present 101 without a degree. Further, five headmistresses and seventeen assistant-mistresses have passed examinations at Oxford or Cambridge which, if those Universities gave the titles of degrees to women, would have entitled them to the B.A. degree. The appointment of a headmaster or a headmistress without a degree (or, in the case of the latter, the Oxford or Cambridge equivalent) is a breach of the scheme. Assistant masters and mistresses, however, need not be graduates, and it is probable that many of the non-graduate assistant masters and mistresses are certificated teachers or the possessors of certificates showing a fair standard of attainment. Certificated teachers are often appointed owing to their professional skill and experience, which are often in striking contrast with the crude efforts of more learned but untrained and unpractised graduates. The London degree seems to be in marked favour, partly on account of the comprehensive character of its curriculum even for the pass standard. One cannot read these figures without recognizing the necessity for watchfulness against two dangers: the first, that the work of many of the schools may be of primary or higher-grade rather than of true secondary standard; and the second, that the staffs of the schools will not contain many masters of high special attainments capable of preparing children in such subjects as classics and mathematics for scholarships at Oxford or Cambridge. It is true that these boys will be the few, but secondary education aims at giving the best advantages to the able few, as well as a sound education to the less able many.

### BEN JONSON ON EDUCATION.

BEN JONSON was a man of many parts and wide capacity. We know him as playwright, epigrammatist, translator, song-writer; we have even heard that he tried his hand at the useful art of bricklaying and served for some time as a soldier in the Low Countries. Perhaps, however, it may be matter for surprise that to his other characters he added that of educational theorist and parents' adviser. That he did so any one may discover for himself who cares to turn to the dusty volumes of his published works, and to those particular pages entitled "Explorata," or "Discoveries." What these discoveries are may be gathered from the title-page of the work where they are described as "Discoveries made upon men and matters as they have flowed out of his daily readings, or had their reflux to his peculiar notion of the times. By Ben Jonson. Printed 1641. London." It is, in fact, a little store-tower of wit and shrewd wisdom that we come upon here, and many readers who find his plays uninteresting or tedious may turn with genuine pleasure and profit to these quaint "Discoveries." All manner of topics are touched upon or discussed—the art of writing and of oratory, the follies and sins of human nature, the wisdom and inspiration of the ancients, the relation of individual judgment to authority, and many other matters find a place in Ben Jonson's philosophy.

Near the end of the "Discoveries," we come upon a little homily on education for the benefit of a certain nobleman who had asked Jonson's advice on the tuition of his sons. It will be remembered that Jonson was himself a scholar of Westminster School, and had the most grateful memories of his old schoolmaster, William Camden, the antiquary.

Something of his gratitude to Camden he has shown in the poem addressed to him beginning with the lines:

"Camden! most reverend head to whom I owe  
All that I am in arts, all that I know."

This passage also shows his high estimate of education and of the work of the true educator. "The price of many things is far above what they are bought and sold for. Life and health, which are both inestimable, we have from the physician; learning and knowledge, the true tillage of the mind, from our schoolmasters. But the fees of the one, or the salary of the other, never answer the value of what we received, but serve to gratify their labours." Some of the ideas in Jonson's little discourse sound strangely modern and philosophical—more philosophical indeed than the views of many nineteenth-century teachers. He shows a consideration for the nature of the child, as well as of the subject, which is distinctly modern; and his summary of the advantages of class teaching is excellent: "It pleaseth your lordship," he begins, "to ask my opinion touching the education of your sons, and especially the advancement of their studies. . . ." Studies have their infancy as well as creatures. We see in men even the strongest compositions had their beginnings from milk and the cradle, and the wisest tarried sometimes about apting their mouths to letters and syllables. In their education, therefore, the care must be greater had of their beginnings, to know, examine, and weigh their natures, which, though they be proner in some natures to some disciplines, yet are they naturally prompt to taste all by degrees and with change. For change is a kind of refreshment in studies, and infuseth knowledge by way of recreation. Thence the school itself is called a play or game. Scholars should not be affrighted or deterred in their entry, but drawn on with exercise and emulation. A youth should not be made to hate study before he know the causes to love it, or taste the bitterness before the sweet, but called on and allured, intreated, and praised. Yea when he deserves it not." This is perhaps, going a little far, but it is at least in the right direction, in those days of undue severity and hardness. "For which cause," he goes on, "I wish them sent to the best school and a public [school], which I think the best."

This was the day of private tutors; so Jonson finds it necessary to defend the public-school system and set forth its merits and advantages: "Your lordship, I fear, hardly hears of that as willing to breed them in your eye and at home, and doubting their manners may be corrupted abroad. They are in more danger in your own family among ill servants (allowing they be safe in their schoolmaster) than amongst a thousand boys however immodest. Would we did not spoil our own children and overthrow their manners ourselves by too much indulgence. To breed them at home is to breed them in the shade, where in a school they have the light and heat of the sun. They are used and accustomed to things and men, and when they come forth into the commonwealth they find nothing new or to seek. They have made, too, friendships and aids—some to last till their age. They hear what is commanded to others as well as themselves: much approved, much corrected; all which they bring to their own store and use and learn as much as they hear. Eloquence would be but a poor thing if we should only converse with singulars [i.e., individuals]. Therefore," says Jonson, triumphantly, "I like no private breeding; I would send them where their industry should be daily increased by praise and kindled by emulation. It is a good thing to inflame the mind, and, though ambition itself be a vice, it is often the cause of great virtue. Give me that wit whom praise excites, glory puts on, or disgrace grieveth: he is to be nourished with ambition, pricked forward with honour, checked with reprehension, and never suspected of sloth."

Alas! most sanguine of men, to be never suspected of sloth is a good deal to ask in a world where Emerson has said: "Every man is as idle as he dares." But hear Jonson on athletics and their place in the temple of education: "Though he be given to play, it is a sign of spirit and liveliness, so there be a mean had of their sports and relaxations." One wonders whether Jonson would have thought this happy mean observed in the present-day public schools.

He concludes with these quaintly wise and gracious words of good counsel: "And from the rod or ferule I would have them free, as from the menace of them, for it is both deformed and servile." Well might the schoolboy of his day have echoed the praise of his brief but telling epitaph: "O rare Ben Jonson!"

M. S.

### CHATS ON CHILD-STUDY.

#### III. CHILDREN AND PICTURES.

PROF. EARL BARNES and others have done a great deal in gathering facts about a child's notions of drawing and appreciation of pictures. Symbolic and diagrammatic, rather than imaginative, again seem to be the characteristics of a child's drawing, and Prof. Sully has worked out and illustrated this point in a clear and popular form. But, as long as our picture-books for children are as wrong as they are at present, there is much work still to be done in applying the conclusions of psychologists. The old days, when "any book, so long as it is simple, will do for the children" was the guiding principle of a parent's choice, when ill-drawn beasts in impossible colours frolicked over the page, and Dainty Dick was reduced from fat to thin

in twenty clear stages—such days were halcyon compared with the present. Nowadays, with so much child-study in the air, a parent is not so light-hearted, but spends great care in selecting a book which suits his own æsthetic feelings in regard to childhood, rather than one which he feels sure his own child would prefer. The market is flooded with books to meet this demand. Over most of them "confusion" is writ large. The illustrations are often nightmares of fantastic detail, with no attempt to throw light on the text. Often the text itself is in old English, or some other type that a child cannot easily read. The book itself is sometimes too small for a child to handle comfortably, sometimes too expensive for him to be allowed to hug and finger and pore over. Let the little fellow wash his hands, but let him have the book to care for and treasure in his own way.

The points to be kept in view in illustrating for children are, first, to seize upon some very definite idea; and, secondly, to express it as clearly as possible. Knowledge of anatomy and perspective are not so valuable to the draughtsman as a power of dramatic arrangement. Detail may be crowded in to any extent, provided that the very smallest has some meaning that the child can easily grasp when told, or weave a fancy round for himself. Again, colouring, however simple, is a source of delight that only a lover of children understands; three coloured pictures are worth thirty uncoloured. One of the best illustrated books for children I have come across, and one which seems to satisfy every requirement, is Boutet de Monvel's "Joan of Arc." It has, above all, a good story shortly told, numerous large pictures gorgeously, yet tastefully, coloured, and plenty of significant detail. It is a pity that some of our stirring stories from English history have not been similarly treated. Coloured plates, of course, increase the expense of a book; but I would urge, in this connexion, that one of the pressing needs of the present day is a greater respect for books. If they are cheap and flimsy, and too frequently bought, children will never learn to care for and love them. A really good book once a year is a far better outlay than the same money spent in one a quarter. But another way of meeting the difficulty of coloured plates is to prepare books with bold, outlined illustrations, which could be easily coloured by the parent or a friend, or by one of the elder children, with help and suggestions from the younger ones. To go a step further, a still greater attraction to a child is a book entirely home-made. A collection of nursery rhymes, for instance (no bought book contains all one's favourites), roughly written in "print," and illustrated as a parent's own fancy directs, might prove to be the greatest treasure of the nursery.

It is a common mistake to suppose that children's books and pictures must necessarily be about children. The fact is, they are not fond of analyzing their own ways and manner of talk, and always prefer to read about grown-up people, so long as the grown-up people are treated from a child's point of view. It is just the knack of treating them in this way that constitutes the whole art of writing and drawing for children. But it is an art that does not come easily to the nineteenth-century analytic mind; and, to get the perfectly childlike standpoint, we must go to the childhood of the race, the early myths and the early pictures, which never fail to awaken a sympathetic chord in a child's nature. In taking children to the National Gallery, it will be found that the most pleasure will be afforded by pictures of the early Italian masters, if they are intelligently explained. The perspective is queer, but that does not offend the little fellow whose own perspective is in a similar stage: the rocks and trees are such as never were on sea or land, but it is quite clear that they are rocks and trees nevertheless. Each saint has a story behind him which we hope the intelligent parent can relate; every detail, even to the pomegranate in the Infant's hand, has a precise meaning; while the lavish and exquisite colour, not to speak of the gold, appeals to a child's love of the gorgeous.

Another common mistake in regard to children's books and pictures is the treatment of humour. There seems to be very little basis for generalization as to children's sense of humour, except in a negative direction. Laughter is very misleading. It is never a measure of the sense of humour at any age. Even babies will chuckle as though at some good joke, apparently from mere physical well-being, and children are always ready to go into fits of laughter if any one sets them off; but, probably, their sense of humour never soars beyond the desire for "comic relief," that the writers of miracle-plays and the early painters of solemn subjects indulged in. Satan in the one, and a grotesque imp in the other, satisfied the uneducated craving to relieve the serious strain. To most children the charm of "Alice in Wonderland" lies in her adventures and bright talk; the actual wit is lost on them. What child, for instance, appreciates the mock-turtle with the calf's head, or the delicate parody of Wordsworth's "Leech-gatherer"? Again, Caldecott's picture-books please because they are simple and good, but most of the humorous touches are lost on a child. We are so eager to point out things to children that it is seldom we wait to observe what a child will laugh at of his own accord. To put one's hat on upside down is generally provocative of more genuine mirth than the best joke in the world. The sense of humour must be cultivated, that is certain; but, as in the case of all else worth having, the growth is very gradual, and, with young children, all one can do is to prepare a soil of habitual cheerfulness and content, with merriment over disturbing trifles.

M. V. H.

## TECHNICAL EDUCATION IN GERMANY.

MISS MARY C. DAWES writes to us from Bonn:—"Those interested in technical education will, doubtless, have marked in the daily papers the noteworthy speech of the German Emperor on the occasion of the celebration of the centenary of the Technical High School of Berlin-Charlottenburg which took place in October, the festivities beginning on the 19th, and lasting for a week. The Emperor's address concluded with the reverent reflection that every science leads us back to the cause of all things, to the Almighty Creator, 'before whom we must bow down in humble thankfulness.' Teachers and pupils should hold fast this conviction, and God's blessing would not fail their work. With this wish he bade the institute Godspeed upon its second century.

"Another notable incident was the unveiling of the monuments of Werner Siemens and Alfred Krupp in the presence of their respective sons. In a commemoration speech on Alfred Krupp, Councillor Servaes told his audience that the man to whom German industry owed so much was born in 1812, and was pronounced by his dying father competent to be placed at the head of his steel-founding works as early as 1826. The works were small, and great were the obstacles that had to be surmounted; but, supported by his faithful mother, the youth undertook the management of them. In his own words, which the speaker quoted: 'From my fourteenth year I had on my shoulders the cares of a father of a family. Working by day, by night I had to brood over ways and means of overcoming difficulties. Whilst working at high pressure, often the whole night through, I lived on potatoes, coffee, and bread-and-butter, without any meat.' It needed twenty-five years of such unflinching endurance and perseverance before a state of tolerable comfort was secured. The growth of the works was so slow that they had only 10 men in 1832, whilst their number, which had risen to 122 in 1845, was only 72 in 1848. But, by one stroke, Krupp's works were to attain the first place amongst the steel foundries of the world, and this by exhibiting at the London Exhibition a block of 4,500 lb., the 'record' achievement of those days. It won the 'Council Medal,' which has not since been awarded to the iron and steel industries. This was the starting point of a rapid growth, which resulted by 1887, the year of Alfred Krupp's death, in the employment of 20,960 men, who, with their families, represented a population of 73,769 souls, the care for whose material and spiritual welfare is well known to have been their master's constant concern.

"Never did Alfred Krupp forget or despise the smallness of his beginnings. It was from his first modest home that his remains were followed to the grave by thousands of his 'fellow-workers,' and within these walls is the office of his only son and heir, to whom their associations make them a sanctuary. The *Geheimrath* Riedler, the Rector of the High School, speaking both of Krupp and Siemens, said: 'These heroes of the technical sciences—Krupp and Siemens—the great pioneers and masters, . . . are immortal examples for us in our duty and our aims. They are our patterns of creative energy of a world-wide scope, opening out new vistas to the problems of general culture and the study of nature. . . . The Technical High School . . . should feel that then only does its activity work in the right direction when furthering the needs of technical application, economical progress, and national aims. It is in this sense that Krupp and Siemens are our true and great forerunners.'

"At a subsequent stage of the proceedings, the same speaker drew attention to the fact that the rulers of Prussia, beginning with the 'great *Kurfürst*,' had always been ardent patrons of Germany's technical progress; and he thanked the reigning Emperor for his constant support and favour, notably shown on this anniversary by his decree which bestows on the school the power of conferring degrees."

## WOMEN'S WORK AT OXFORD.

THE Report and Calendar of the Association for the Education of Women in Oxford, which have just been issued, show an increase of twenty in the number of students on the books. The total number of students who obtained Honours in 1899 is fifty-four, more than a quarter of the whole body of students resident in that year. The ordinary work of the Association has been continued, and the Nettleship Library, which is open to all registered students and members, has been developed, the financial position of the Association being so satisfactory that the Council have been enabled to make substantial grants for the purpose. Arrangements have also been made to reduce to some slight extent the fees paid for lectures and to make a grant to the Poor Students' Fund.

This report further draws attention to some important changes made by the Delegates of Local Examinations, the body through which women are admitted to University examination. The First Examination for Women is to be discontinued. This examination was introduced twenty-two years ago as an alternative to Responsions, which were at that time not open to women. In itself

it was of little value, but women who passed it were qualified to enter for the higher examination, and it was employed as an entrance test for students who wished to come into residence. The examinations that can be taken in its place are specified in the regulations issued by the Delegacy. Those which admit of French and German being substituted for Latin and Greek are either more difficult or are held once in the year only, and it is much to be desired that more students should, before coming to Oxford, take Responsions, or obtain an exemption accepted by the University in the case of men.

The value of Latin to students of English and history is now very generally acknowledged, and the degree course is more frequently taken. Unfortunately, however, girls often postpone serious work in classics until they come up, and, consequently, waste a good deal of time; while a few months' work under a competent teacher would make it possible for them to start regular University work at once. Responsions are held four times in the year—in March, July, September, and December; so that failure does not, as in the case with several other examinations, mean a delay of a year.

The Delegates have also made an alteration in the only Honour examination they still conduct. After 1900, students will be required to offer either French, German, or Italian for Honours in Modern Languages; not two languages, as before. The standard of requirements in the language offered has been raised, and the whole examination must be taken at one time.

## REVIEWS.

### CICERO AND HIS CORRESPONDENTS.

*The Letters of Cicero.* Translated by E. S. Shuckburgh.  
Vols. I., II. (Bell & Sons.)

Mr. Shuckburgh has given us the first instalment of a complete translation of Cicero's letters, a task left unattempted, except in fragments, since Melmoth's version of the "Letters to several of his Friends," which appeared in the middle of the eighteenth century, and Heberden's, of the "Letters to Atticus," published early in the nineteenth. Since then great advances have been made in classical scholarship and in knowledge of antiquities—advances embodied in the excellent edition of Messrs. Tyrrell and Purser, to which Mr. Shuckburgh freely acknowledges his obligations. It is strange that we should have had to wait till nearly the end of the century for both a complete edition and a complete translation of the work that, of all others, enables us to enter most completely into the life and thoughts of a Roman statesman, scholar, and gentleman, at one of the most critical periods of the world's history—a period combining, if the comparison be permitted, the interest of *le grand siècle* with the interest of the French Revolution. Mr. Shuckburgh's work is careful and conscientious, and he has had at his disposal all the resources of modern scholarship. If we venture to point out what seem to us some defects, we are only complying with the anticipations of his very modest preface, the keynote of which is *opus adgreddior opimum casibus*. Our chief complaint against the translation is that it seems, in places, to savour too much of the examination-room, and to be wanting in that *verve* and freedom which would commend it to an English reader ignorant of the original. Take, for example, a passage from the "Letters to Atticus" (II. 1):

Tusculanum et Pompeianum valde me delectant, nisi quod me, illum ipsum vindicem, aeris alieni, aere non Corinthio, sed hoc circumforaneo obruerunt.

My Tusculan and Pompeian properties please me immensely, except that they have overwhelmed me—me, the scourge of debt!—not exactly in Corinthian bronze, but in the bronze which is current in the market.

"Tusculan and Pompeian properties" is a little heavy; "me, the scourge of debt," is bright. The failure is in the last part of the sentence. To a reader ignorant of the Latin *aeris alienum* it conveys no idea at all, or, if it conveys any, it implies that Cicero was, at any rate, well off for small change. Heberden's version is dull, but intelligible: "not with Corinthian brass, but debts of this ordinary brass money." Would it not have been better to turn the flank of the difficulty, and to put something like this: "have encumbered me, not with the works of Corinthian artists, but with the bills of Roman money-lenders"? Again, take a passage from a letter to Appius Claudius Pulcher (Fam., III. g), a noble friend who at any moment might become an enemy:

Et velim, reliquum quod est promissi ac muneris tui, mihi persolvas. Quum ipsam cognitionem juris augurii consequi cupio, tum mehercule tuis incredibiliter studiis erga me muneribusque delector.

I should wish you also to pay me the promised addition to your former present. I am both anxious to complete my knowledge of augural law, and am also, by Hercules, incredibly delighted with attentions and presents from you.

The first sentence is, to say the least, stiff, and does not give one the idea of a friendly or slightly deferential request to an author for a new volume of his book. Besides, it leaves us in doubt what the promised present is. In the second sentence, "by Hercules, incredibly delighted" is surely more Latin than English. Here we should be inclined to prefer Melmoth's

To this request I will join another, and remind you of executing your promise of sending me the completion of your treatise on augury. I ask this, not only as being desirous of informing myself as to the rites and principles of the sacred college, but as I receive with immense satisfaction every mark of your favour.

There is no ambiguity about this, and it is just what Dr. Melmoth himself might have written to a literary nobleman. One more example ("Att.," I. 14):

Res agebatur in circo Flaminio, et erat in eo ipso loco illo die nundinarum *παρρηγυρις*; quaesivit ex eo, placeretne ei iudices a praetore legi, quo consilio idem praetor uteretur.

The meeting was in the Circus Flaminius, and there was in the same place that day a crowd of market-people—a kind of *tiers état*. He asked him to say whether he approved of the jurymen being selected by the praetor, to form a jury for the praetor himself to employ.

The first sentence shows Mr. Shuckburgh at his best; the expansion is necessary and is made in a bright and popular way. The second sentence is less happy; it is just one of those cases, so familiar to teachers of Latin prose, where English is more terse than Latin. Would it not be quite adequate to say: "of the praetor selecting his own jurymen," or, a little more fully, "of the praetor selecting the jury to try the case with him"? The terse English expression "selecting his own jurymen" is just one of those of which one is accustomed to say, where one tries to turn it into Latin, *latet anguis in herba*. It is not quite fair, perhaps, to judge a work of such magnitude by a few passages taken at random; but it is difficult to resist the conclusion that Mr. Shuckburgh's translation, with all its merits, would have been improved by a lighter and a freer hand, and a more thorough command of terse and idiomatic English.

### OH, YE GODS!

*The Gods of Old, and the Story that they Tell.* By Rev. J. A. FitzSimon and V. A. FitzSimon, M.D. (Fisher Unwin.)

The reviewer, anxious to deal fairly with this extraordinary volume, must confess himself utterly at a loss, as, wavering between tears and laughter, he closes the strangest farrago of science and nescience that ever he was invited to pronounce upon. The authors—one a doctor of medicine, the other a clergyman—have read a considerable number of modern scientific works. They have also read the classical poets—or, rather, certain portions of them—and they know Genesis in the Septuagint. Being by nature altogether destitute of any poetical sense, they have apparently hit upon the preposterous notion of reconciling ancient poetry with Hebrew theology and nineteenth-century science. Or, rather, they go much further than that; for they positively believe that the poets were consciously clothing scientific truths in every detail of the mythology that they elaborated. If, for example, Polyphemus sings to Galatea: "Lac mihi semper adest niveum," we are bidden to remember that the "steam, gas, oil, and water spouting from the geysers and thermal springs are of a white or light straw colour." And, when the giant is made to say that he has found two bear cubs for the nymph, Ovid means, of course, that Chemical Force has discovered Magnetism and Electricity as special gifts to Elementary Matter! And, if only we grasp these and several other equally obvious facts, the story of Acis and Galatea "is a vivid description of a volcanic outburst and its after-effects, written with the master-hand of a poet and a scientist," instead of being "a silly and grotesque love story with a preposterous transformation." In order to understand *θεμιοτρονεί εκαστος* in "Odyssey" 114 (like most pseudo-scientists, the authors are intolerably careless), you would do well to "heat Sal Ammoniac with lime."

But perhaps the gem of the book is the interpretation of

Horace, "Odes" III. vii., the pretty little trifle beginning "Quid fles, Asterie?" "The personages mentioned in it," say our latest commentators, "have so failed to be recognized that all commentators are forced to agree with the following remark of Orellius [*sic*]: 'Asterie, Gyges, Chloe, and Enipeus are all imaginations of the poet's brain.' Quite true; but the imaginations of the true poet, ancient or modern, are bred of reality. There must be a theme for song, and the theme in this case was one of the geological mutations through which our earth has gone." And so a charming series of notes is concocted to "interpret" poor Horace. "Lament not, O Metamorphic rocks, for the Devonian formation," and so on.

The authors' notion of what constitutes evidence is, to say the least, as *naïve* as strange. They manufacture arguments entirely valueless, with perfect good faith, to support conclusions wholly unwarranted. "Here is a passage," they write, "that can be translated in conformity with the Undulatory theory [of Light] by rendering *aque tremulum* as 'undulating':—

Sicut aquæ tremulum labris ubi lumen aenis,  
Sole repercussum," &c.

Charming, no doubt, and most convenient rendering—only that it is obviously impossible, since the despicable rules of grammar require us to put *aque* with *labris*.

After inspecting these few samples, the reader, we trust, will not be startled when we assure him that the Messrs. FitzSimon sincerely believe that the ancient poets "had cognizance of and belief in the Trinity and a Christ to come," which belief they perhaps exhibited in their writings. Now, such a statement is, on the face of it, one that should not be lightly made; and so we look eagerly for the evidence on which it is based. And this is the stuff we are asked to accept as such:—"Ovid opens his 'Metamorphoses' with the line—

Ante mare et terras et quod tegit omnia cœlum.

This, by transposition of the letters, becomes—

Ante Deus cœlum et terram atq' omnia ore tegit

—"In the beginning God clothes heaven and earth and all things by His word." Spirit of Donnelly! and *atq'*, and *ore*, "by His word!" The "Theogony" of Hesiod, we are assured, opens with a line which may, by transposition of letters, be tortured into "Christ, indeed, the Shepherd, is both the Alpha and Omega."

The authors apparently have never heard of comparative philology. The etymologies they put down are constantly so utterly ridiculous that it is almost an insult to our readers' intelligence to offer specimens. We will content ourselves with one, which is by no means among the most preposterous: "*Λυσιμελής*, from *λύσις μέλω*, 'presiding over resolution,' as seen in the law styled 'the resolution of force.' We lack patience to demonstrate—what is sufficiently obvious without demonstration—the absurdity of this twaddle.

The titles of the authors, and the solemnity of the subjects which they handle with such self-assurance, forbid us to regard their production as either a parody of medieval reasoning or a laboured satire on modern pedantry. But, worthless as the book is to a serious inquirer, it may afford, in those lengthy parts of it which are filled with excerpts from and comments on classical poetry, a really hearty laugh to any weary student who lights upon it. In the hope that it may occasionally fulfil the function of a grotesque, it is, after all, worth keeping. The authors we would seriously counsel to read such books as Lang's "Custom and Myth," and Frazer's "Golden Bough"; and to reflect how the large parts of ancient poetry that they leave out of account—the Homeric Hymns, for example—are to be reconciled with their outrageous theory.

#### IDEALS OF A SCHOOLMASTER.

*Unwritten Laws and Ideals of Active Careers. Essays by Various Writers.* Edited by E. H. Pitcairn. (Smith, Elder, & Co.).

Perhaps the best way of enabling the reader to judge of the character and quality of this very readable volume, especially as the title is a little vague, will be to enumerate the eighteen writers, and the subjects of their essays. Sir Edward Malet writes on Ambassadors, Lord Monkswell on the House of Lords, Sir Reginald Palgrave on the House of Commons, Rear-Admiral Penrose-Fitzgerald on the Royal Navy, Major-General Maurice on the British Army, Lt.-General McLeod Innes on the Royal Engineers, Major-General O'Callaghan on the Royal Artillery, the Rev. W. B. Trevelyan on the Clergy, Sir Herbert Stephen on the

Judges, Mr. Birrell on Barristers, Sir R. Brudenell Carter on the Medical Profession, the Rev. A. Austen Leigh on Vice-Chancellors, Bishop Welldon on Schoolmasters, the Rev. G. G. T. Heywood on Boys at Public Schools, Mr. J. H. Tritton on Banking, Mr. Fuller Maitland on Musicians, Mr. G. F. Watts on Art, and Mr. Alfred Waterhouse on Architects. It is evident that men of this stamp could not fail to be interesting when they give us their ideas as to the unwritten laws of their several callings, and on the ideals which they have recognized for their own guidance. If it is inevitable that they should seem at times to "give away" their professional brethren or themselves, or, at least, to show how much a professional man may be bound by the twisting threads of etiquette, still, on the whole, their candour is delightfully refreshing, and it tends in almost every instance to raise our ideas of the status and standards of professional life in England.

Dr. Welldon—who wrote his essay on the eve of quitting Harrow, for the publication of the book has been somewhat delayed—sets out by saying that, among the recognized learned professions, none has risen more rapidly or remarkably in public estimation than the educational. The schoolmaster who respects himself is no longer treated as "a sort of higher servant" by the parents of his pupils.

Even now there are some who treat private tutors—and, still more frequently, private governesses—with the contemptuous indifference that is more acutely resented because it is externally polite. But, upon the whole, although the teachers of elementary schools live rather hard lives, and teachers of girls are less highly esteemed than those of boys, masters, and especially headmasters of the great public schools, enjoy as much respect as they deserve; it may even be said that some of them have rather more.

Amongst the qualifications of a schoolmaster, Dr. Welldon (who writes particularly of the masters of public schools) reckons a fair knowledge of literature, and he advises young masters to undertake some literary work, which will be likely to improve their scholastic ability.

A man who has been engaged, for however brief a time, in literary study or production comes back refreshed to his work of teaching. His intellectual life is not stationary, is not monotonous, and whatever he learns in pursuing his own subjects he can impart more or less directly to his pupils. For it must not be forgotten that the educational profession is, in its nature, intellectually cramping.

At the same time the ideal headmaster should be also in the best sense a man of the world. His knowledge of the world will act as a corrective of his scholarship, and will be "an antidote to worldly ways and worldly views." In addition, a headmaster should possess the special tact which is the secret of educational success. What this tact is, it is difficult to say. "It is generally born in a man; it is seldom, though sometimes, won by experience, but without it a man cannot succeed as a schoolmaster." There is no profession in which a good man may do so much harm. "His very virtues become vices; his goodness and kindness are themselves sources of failure, unless he knows when to relax and when to tighten the rein of discipline."

Dr. Welldon is very suggestive and helpful in considering the relations of a headmaster to his pupils, to his colleagues, and to parents.

The choice of good masters is everything. The longer I lived as a schoolmaster the less was my faith in systems, time-tables, and educational reforms, and the greater my faith in men. It is personality which tells.

In the relations of a headmaster with his boys, the two great needs are a firm discipline and a wise sympathy.

Sympathetic severity seems to me to sum up the true character of a schoolmaster. But, above all, a schoolmaster, and a headmaster especially, must be just; for, as courage is the virtue which boys admire most in each other, so it is justice which they admire most in their masters. A master who is not just, but oppresses one boy and favours another, is bound to fail. According to my experience, however, the difficult thing is not to be just, but to *seem* just. I have been sometimes tempted to paraphrase the famous line of Æschylus, which was said to refer to Aristides, and to remark of myself that I wish not so much to be just as to appear just.

We have quoted enough to show the value and wisdom of Dr. Welldon's essay, and must leave the reader to turn for himself to its admirable conclusions—as well as to turn to other essays in this noteworthy book, which will be found no less interesting than the one at which we have glanced.

## SCHOOL AND COLLEGE HISTORIES.

- (1) "Cambridge Series for Schools and Training Colleges." Edited by W. H. Woodward.—*A Short History of the Expansion of the British Empire, 1500-1870.* By W. Harrison Woodward, Christ Church, Oxford. (Cambridge University Press.) (2) *A History of England for High Schools and Academies.* By Katharine Conran, Ph.B., and Elizabeth K. Kendall, M.A. (New York and London: Macmillan.)

We have in these two volumes two contrasted methods of treating English history, the former of which is more specialized, and, in a sense, more ephemeral, than the other. Mr. Woodward gives us a history, not of the nation, and still less of the popular development, but of the mere movement of territorial expansion. And in doing this he does not seek to provide a digest of the facts relating to colonial history; for, as he justly says, a manual of information is not the same thing as a text-book, which should not merely store the mind with facts, but stimulate and guide the reader in drawing his own conclusions.

Mr. Woodward makes an appeal in his preface which would have been more timely a few years ago. After stating that this book is not intended for young students alone, he says:

It would be well if a narrative of the rise of our Empire were needed only by them. No civilized country treats its national history with such scant regard as Englishmen. It surprises foreigners to see how phlegmatically we ignore the story of the growth of our great dominion, an unconcern which reacts inevitably upon our schools of all types and grades. If Germany, for instance, had such a history as ours, it would be the central subject round which all their national education would revolve.

There is some truth in this, even to-day, but the sting of the reproach has been extracted by scores of recent writers who have dealt more or less systematically with the history of the colonies and of the British Empire. It is no longer quite convincing to talk of our ignoring the story of our world-wide dominion.

However that may be, Mr. Woodward tells this story *in usum scholarum* in an altogether admirable manner. His twelve chapters are a continuous and concise narrative of the progress of expansion, clearly set forth, kept distinct from other historical issues, and holding the attention of the reader throughout to the single theme and purpose of the book. The original settlement or conquest of our various dependencies is regarded as of greater historical value and interest than their subsequent developments, and it is on these earlier stages that Mr. Woodward chiefly dwells. He does not carry the history of India beyond 1858, nor of Canada beyond 1867, nor of Australia beyond the grant of responsible government. From this point of view the settlement and subsequent loss of the American colonies clearly belong to the scheme of the work, though their story may not for all readers be "more instructive than the orderly progress of Australia." One of the dangers of colonial history, as it is generally written in these days, is that it tends to sacrifice everything to the enterprise and heroism of the pioneers. Mr. Woodward says that "for real insight into motives and forces, the Elizabethan time perhaps has merits which the Victorian age lacks." But the Victorian age means sixty years of development and organization. One would think that, for historical purposes, almost enough had lately been said by way of apology for, or glorification of, our modes of acquiring dominion, and that a great deal more needed to be said of our indisputable genius for organizing and governing our possessions. We must repeat that, within the lines marked out by Mr. Woodward, he has written an excellent volume, thoroughly suited for school use.

Miss Conran and Miss Kendall, who are Professors of History in Wellesley College, have no such special object as Mr. Woodward has, and their volume of five hundred pages deals pretty comprehensively with the forces which have been at work in producing the England of to-day. They pay particular attention to laws and institutions, to the struggles for charters and Parliamentary powers, to revolutions, parties, the growth of democracy, and the condition of the people; and less to mere dynastic or aggressive wars, save in so far as these may have affected industrial prosperity or constitutional tendencies. This is a decidedly good book. It has an extraordinary number of maps, large and small, over a hundred pictures and portraits (some of these being scarcely worth printing), with lists of authorities, tables, and other aids to a willing student.

## THE GEOMETRY OF CRYSTALS.

*A Treatise on Crystallography.* By W. J. Lewis, M.A., Professor of Mineralogy at Cambridge. (Cambridge University Press.)

This is a very exhaustive and complete treatise on the geometry

of crystals. The classification is based on the principles of symmetry. The forms are represented graphically, and a very useful nomenclature is devised to represent their relations. The problem of Nature seems to have been to divide space into sections, so that each small section is similar and similarly situated to the larger sections which are built up out of the smaller. The conditions to be observed in this division of space lead to a few easily deducible properties of crystals, such as the following:—Crystals are homogeneous solid bodies, bounded by plane surfaces. The planes are parallel in pairs, for the bottom of one crystal must fit the top of another. They are necessarily arranged in *zones*, *i.e.*, in sets, the planes of each of which intersect one another in parallel edges. The physical properties, such as the cleavage, as well as cohesion, elasticity, optical and thermal characters, are found by means of Professor Lewis's geometry to be intimately connected with the symmetry of external form. The first step in the classification is to prospect the thirty-two possible classes of crystals so that each is a definite group. Beginning with forms in which the symmetry is least, the author passes upwards from one class to another, so that at each step there is the least addition to the symmetry of the preceding class. When no further classes can be obtained by this process, a fresh start is made with a class which has the least symmetry of a new kind. In this way all possible forms are exhausted, and all possible combinations of the pyramids, prisms, domes, and end-faces are made. The completeness of the grouping is only excelled by that of Nature herself. The nomenclature and symbolism are based on the works of such writers as Naumann, Miller, Groth, and others, but they are much improved by the author. The deductions from data of goniometrical measurement follow in the main the order of Kopp's "Einleitung in die Krystallographie," although this is not one of the works to which the author admits his indebtedness. The geometrical treatment by the stereographic projection and the anharmonic ratio of four tautozonal faces, which is associated with the name of Miller and with the Cambridge manuals of Miller and of Miller and Brooke, are carried here further than in any other treatise. From the measurements made, the theory shows how other data not so easily measured may be derived. For instance, five angles of the crystal oligoclase having been measured, it is required, as a problem, to determine from these five angles the parametral ratios and the angles between the axes of the crystal. Spherical trigonometry is brought into requisition, and the required results are then calculated. The work runs to 600 pages, and is a very interesting addition to the "Cambridge Natural Science Manuals" published by the University Press.

## RHETORIC.

- (1) *Elements of Rhetoric and English Composition.* First High School Course. By G. R. Carpenter, Professor of Rhetoric and English Composition in Columbia University. (Macmillan.) (2) *Introduction to Rhetoric.* By William B. Cairns, Ph.D., Instructor in English in the University of Wisconsin. (Boston: Ginn & Co.)

What, then, is Rhetoric? Prof. Carpenter gives alternative forms of definition: "Rhetoric is the art of effective communication by means of language," or "the art of expressing by words precisely what we mean." The second form, he says, is more simple than the first. But does it express the same meaning? And is either form satisfactory? Surely one can make effective communication by means of language without coming within the sphere of rhetoric; and one may express one's meaning with mathematical precision without a suspicion of rhetorical aid. Further, Prof. Carpenter, a couple of pages later, tells us that rhetoric is also, "to some extent, a science"; but such extent he himself assigns to English composition. When the two are spoken of as "parts of an educational system," rhetoric means "the principles of the art," and English composition means "the practical exercises by which we acquire skill in applying these principles." Instructor Cairns wisely acknowledges the impossibility of giving a perfect definition, and contents himself with saying that we may think of rhetoric as "the study that teaches us to speak or write our thoughts in the best manner," adding subsequently that "best" means "best adapted to our purpose." He does not trouble himself about English composition, but he divides rhetoric into style and invention; "style" covering a hotch-potch of matters of grammar, spelling, and other elements, and really looking not unlike Prof. Carpenter's "English composition," while "invention" covers the usual large branches of rhetoric (description, narration, exposition, argumentation, persuasion), although where the "invention" is prominent is not clearly apparent.

Perhaps it would be well to rest content with a description of rhetoric, where one is unable to devise a definition that will stand the simplest tests. It may be conceded that grammar and rhetoric run into each other, and then all that can be expected is a discrimination between the grammatical and the rhetorical aspects of the same collocation of words. For elementary classes we have here a considerable field of useful work. About a third of each of these volumes is devoted to this preliminary matter, and we do not say the space is too large; but we do think that much of it is as good as wasted. What on earth is the use of worrying over spelling, punctuation, "capitalization" (use of capitals), incorrect use of words, ordinary blunders of sheer grammar, analysis of sentences, and so forth? All such things are clearly outside anything that can usefully be called "rhetoric." What we usually designate the "figures of speech," or "rhetorical figures," are treated only in a casual and extremely fragmentary way; yet one would have expected that these would open the discussion, that they would be marshalled in some systematic order and explained and illustrated briefly but sufficiently. There is also a good deal of treatment of the sentence and the paragraph in their rhetorical aspects. This is very useful as far as it goes, but it might well have gone further. True, Prof. Carpenter gives it space enough; but what we should have desiderated would have been less pretentiousness of form and more effectiveness of matter. Mr. Cairns, as we have said, treats the great forms of composition—the grand subjects of rhetoric—in separate chapters, and his sketch will be useful for beginners. But Prof. Carpenter does not proceed so far as even to indicate their existence: except that he mentions "narrative" casually in dealing with sentences and paragraphs. One can only say that both volumes contain a miscellany of matter that will prove useful one way or another to the student of English, but that they are both crude performances regarded as expositions of rhetoric. Mr. Cairns's book is much more complete, and for elementary purposes needs mainly a drastic excision of preliminary matter that ought to be taught and arranged under other heads antecedent to rhetorical studies. Prof. Carpenter would have been better advised had he also excised severely and limited his treatment to the two main subjects of his book, sentences and paragraphs, dropping rhetoric into subordination. Still, there are schools in this country where even such a crude handling of the subject would be much better than nothing of the kind at all.

## GENERAL NOTICES.

### CLASSICS.

The production of school editions of the classics with illustrations is becoming a distinct branch of publishing enterprise. The principle of training the mind through the eye is so obviously sound that we can only wonder that English schools should have been kept waiting so long for pictures. But it is not to be denied that the task of finding appropriate pictures among the various objects that have come down to us from antiquity is not an easy one. Merely fancy pictures should clearly be ruled out; but this means that the very passages that call most distinctly for the aid of illustration are just the passages that there is no means of illustrating adequately. Still, on the whole, the publishing houses have made a brave beginning; and, being thankful for what they have done, we are not disposed to be over critical either of the subjects or of the production of the illustrations.

*The Odes of Horace, Book IV.*, by Stephen Gwynn (Blackie), contains eight little pictures, and the only one to which any serious objection can be raised is the bust labelled "Head of Hannibal." This bust is generally regarded as of very doubtful authenticity. The notes, occasionally a little long, are generally sound; but we are astonished that Mr. Gwynn supports *Tumque dum procedit* in 2, 49. There are very few grammatical notes, and a considerable quantity of translation.

*The Agricola of Tacitus*, by W. C. F. Walters (Blackie), forms a volume of the same series. So much trouble has evidently been spent on the preparation of this edition that it is an unpleasant duty to be forced to pronounce a verdict, on the whole, unfavourable. The illustrations, taken from the remains of Roman Britain, are well reproduced from photographs; but they do not, with one or two exceptions, properly illustrate the text. The notes are singularly uneven, some being quite advanced, others very elementary. A note is occasionally repeated, as, for instance, that on *chiasmus*; and the renderings, frequently given, are not very good. There are, however, some useful grammatical notes, and the subject-matter is carefully explained. Appendices on "Questions connected with the 'Agricola,'" and its purpose, are followed by an entirely elementary note on translating,

which seems intended for beginners. It is thus difficult to say for what students the book is meant.

From Mr. Murray we have "Murray's Handy Classical Maps"—*Gallia*. This map is admirably produced, and coloured on a sound principle. The scale also is considerably larger than that of the ordinary English classical maps; and the series seem to mark a welcome and long needed advance in our cartography. But it is to be regretted that the map of Gaul is not wholly abreast of the most recent scholarship, and does not carry us much beyond Kiepert's school atlas. For example, *Bibracte* is here still identified with *Augustodunum*; though the identification is now admitted by the specialists to be impossible. The indented map, on which what professes to be the route of Caesar and his army is marked, though it follows Kiepert, rests in many of the details on mere conjecture, the truth being that it is impossible to ascertain the exact line of Caesar's marches.

*The Histories of Thucydides, Book VI.*, translated by E. C. Marchant, M.A. (Bell & Sons), is an instalment of a full translation of "Thucydides," which Mr. Marchant is contributing to Bell's "Classical Translations." The English is admirably free, without any sacrifice of fidelity. There is an excellent introduction of a dozen pages, and a good map.

### MATHEMATICS.

*Euclid's Elements of Geometry, Books I.-IV.* Edited for the use of Schools, by Charles Smith, M.A., and Sophie Bryant, D.Sc. (Macmillan.)

The propositions of elementary geometry are here treated in Euclid's order, but without any scrupulous regard for the words of Simson. There is no repetition, and consequently considerable condensation as compared with most other "Euclids." Very suggestive and useful notes are added, and occasionally alternative proofs are given. Thus Euclid II. 12 and 13 have as alternatives the proofs which are analogous to I. 47. This is, in many respects, preferable to the less graphic method usually adopted. In Book II. the absurd cross diagonals are avoided, and in Book IV. the editors have used a wise discretion both as regards form of proof and as regards construction. Abbreviations are very freely used. Additional propositions of a well known and useful kind are added to each book, and the proofs are always very neat and sometimes novel. There is a little want of uniformity in the use of thick lines and thin in the figures, to distinguish the lines of construction added to the original figure, but this is a small matter.

*Practical Problems in Arithmetic.* Grouped and arranged for Group B, Standards V., VI., and VII., and Higher Rules. (Blackie.)

The questions are arranged according to types, and those formed by variations of the given type are, in each case, (A) mental, and (B) written. The books are of reasonable size—forty to fifty pages—and are well edited and clearly printed.

*The Elements of Coordinate Geometry. Part II., The Conic.* By J. H. Grace, M.A., and F. Rosenberg, M.A., B.Sc. (Clive.)

This work is based on Salmon's classical work, but it differs from Puckle's (facetiously called Puckled Salmon) in the care which the authors have taken to develop the subject more gradually, and to explain every point fully. The exercises are well graduated.

We have also, from Mr. Edward Arnold, a new and revised edition of *The Elements of Euclid, I.-VI.*, by R. Lachlan, Sc.D.—a good text-book for students of all classes.

### MODERN LANGUAGES.

*Schiller's Maria Stuart.* Edited by H. Schoenfeld. (New York The Macmillan Co.)

Schiller's drama has been so often edited as to leave little room for fresh illustration. In particular the excellent English editions of Dr. Breul and Dr. Buchheim have appeared within the last half-dozen years, the latter characterized by a thorough study of the materials at the poet's disposal. Prof. Schoenfeld seems to have drawn pretty freely on both editions, besides using the material accumulated by Düntzer and others; but he does not appear to have added much in the way either of research or of help to the young student. Still, it is a carefully worked out and useful edition. His strongest point is the suggestive way in which the connexion of the scenes with each other and with the action of the drama is brought out. Translations are sparingly given, and rightly so; such as find a place in the notes do not, however, always set before the student a high ideal of the style required for rendering poetry. "The abundance of forms streamed forth profusely from walls and ceiling"; "Has the verdict been rendered against me?" are scarcely good models; nor, if it is found necessary to translate

"Odi profanum vulgus et arceo,"

should we be put off with "I hate and repel the profane rabble"—a thoroughly schoolboy version. One curious example of the absence of that sound, general knowledge essential to an editor may be quoted. In the well known summary of Catholic doctrine we have

"Das seine Augen sehen müssen was  
Das Herz soll glauben"

—an obvious reference to the importance of symbols. The editor

quotes, à propos of this: "Nihil est in intellectu quod non prius fuerit in sensu"—the doctrine of Hobbes, diametrically opposed to Catholic philosophy. A moderate number of etymologies are given—some in a form likely to fix the student's attention; others in a less interesting way. Every etymology given in school notes—and they should be given but sparingly—ought to have some link to connect it with what the student may reasonably be supposed to know. The original meaning of *beklemmen*, by the way, is not, according to the best authorities, "to seize with claws." The book is nicely got up, with views of places and portraits of the chief characters. We noticed a few misprints, as "teaming" for "teeming" (page 226), "Britanny" for "Britain."

(1) *Dent's First German Book*. By S. Alge, S. Hamburger, and W. Rippmann. (2) *Dent's German Reader*. By S. Alge and W. Rippmann.

(1) These two books cover the first two years of the course advocated by the pioneers of the "reform" movement in Germany. The general principle is to compel the pupils from the very beginning to think more or less in German, and to connect the German words, not with their English equivalents, but with the subjects they represent. Accordingly, the basis of the "First Book" (in which English type is used) is Hölzel's "Pictures of the Seasons," though it is by no means limited to them. It is to be hoped that the wall-pictures are better than the reproductions of those at the end of the book. Even the originals might well be superseded by something more artistic. The book is in German throughout, even to the grammatical notes, which are happily not intended to be learnt by heart, like

"As in presenti perfectum format in ari."

Even the vocabulary avoids English, and gives a short sentence from the text to suggest the meaning of each word: for example, we find "Der Jäger schießt viele Hasen; es hat einen grossen Sack voll," instead of *schiessen*, shoot; *Sack*, sack, bag. Grammar is supposed to be taught incidentally, the pupil gradually forming his rules for himself under the guidance of the teacher. A summary, still in German, is given towards the end of the book. The selection of short poems to be learnt is excellent.

(2) The "Reader," in which German type is introduced, is constructed on the same principles as the "First Book," and contains, besides descriptions adapted to pictures of *die Stadt* and *die Wohnung*, stories and poetical extracts, all with appended questions and exercises. The vocabulary consists partly of illustrative sentences like those given in the "First Book," partly of German definitions of German words. Both works are compiled with great care. The system very properly makes great demands on the energy and liveliness of the teacher. The books might easily be utilized by those who are not such strict purists as the authors in the matter of excluding English. The plan of teaching seems better adapted to children beginning German at a comparatively early age—and it is much to be wished that it should be begun early—than to schoolboys of thirteen or fourteen, to whom the grammar of other languages is more or less familiar. Towards the accurate translation of German into English it does nothing, nor does it profess to; towards the converse process it forms an excellent step. If work of this kind could be got through early, not only would the practical use of a foreign language come more readily, but greater opportunities would be afforded, at a later stage, for the indispensable intellectual discipline which accompanies scholarly translation into and from one's own language.

#### MISCELLANEOUS.

"The Story of the Nations."—*Modern Spain (1788-1898)*. By Martin A. S. Hume. (Fisher Unwin.)

This very interesting volume contains the story of a nation during a century of "struggle upward out of the abyss into which despotism and bigotry had sunk it." There are more things than despotism and bigotry to account for the slow development of modern civilization in Spain; but that belongs to the earlier, as well as to the later, history of the country, and Mr. Hume confines himself to the record of a century. He starts with Charles IV. and his Minister Godoz, who allowed the ancient monarchy to be dragged at the tail of the French Republic, from which unhappy condition it was rescued, after a dozen disastrous years, by a popular revolt and the victories of Wellington. Revolutions and Carlist conspiracies fill up the annals of the middle decades; and, from the flight of Cristina to the flight of her daughter Isabel, the story of Spain is one of constant intrigue, confusion, and anarchy. The more recent story of Spain, from the restoration of Alfonso XII. and the granting of the Constitution in 1876, is told in a single chapter; and the Cuban insurrection, the war with the United States, and the loss of the Spanish colonies are dismissed in seven or eight pages. No doubt Mr. Hume considered that it was too early to chronicle these events with historical detachment and adequate detail. From that point of view the narrative of this volume may be said to close with the accession of the present King and the earlier regency of Queen Cristina. Even so, there is no question as to the actual interest and timeliness of this story of modern Spain.

*Our Navy for a Thousand Years*. By Captain S. Eardley-Wilmot, R.N. (Sampson Low, Marston, & Co.)

The author of this volume gives us a concise account of "all the

principal operations in which the British Navy has been engaged from the time of King Alfred to the recapture of Khartoum." He says, very truly, that no romance could well be more attractive to young and old than such a narrative, which teems with incidents of the most varied and exciting character. His aim has been to combine the story of the Navy itself with the chief events of our general history; and, of course, that is the best way of showing the real service of our ships to the nation. The purpose of the book has been very well carried out. It is readable from first to last, and is freely illustrated by naval scenes, fights, and portraits of ships.

*Prisoners of the Tower of London*. By Violet Brooke-Hunt. (Dent.) From Flambard, the first prisoner of the Tower, to Arthur Thistlewood and the other Cato Street conspirators, who were the last—and these were packed off to Newgate Street, as being unworthy of the dignity of a grand State prison—the author of this pleasant volume tells us as much as she has learned of the interesting succession of historical captives. She has written her story simply and without undue pretension; and, though it might have been told more learnedly and with a nearer approach to finality, there is no necessity to dwell on such a contrast. Many extremely interesting records have been brought together, and they are linked by a readable narrative. The book is well illustrated with portraits and views of the Tower.

*Freehand Drawing of Ornament*. By Robert Bunting. (C. A. Pearson.) This is a collection of drawing copies reproduced from original photographs, selected and arranged by Mr. Bunting, who is art master under the Tottenham School Board. There are twenty-two progressive copies, and they are admirable examples of the application of photography to the production of flat representations of the round. The book is preceded by some very clear and judicious suggestions for freehand drawing.

(1) *Evangelical Belief: a Prize Essay on the present Conflict between Evangelicalism and Sacerdotalism*. By J. B. Nichols. (2) *Until the Day Declare It: a Prize Story*. By Margaret Cunningham. (3) *The Vicar of St. Margaret's: a Prize Story*. By M. G. Murray. (Religious Tract Society.)

These three books represent the outcome of the Religious Tract Society's offer of £171 for "the best exposition of sacerdotalism," and the best long and short stories on the evils of the same theological standpoint. The *parti pris* may deprive the stories, at any rate, of much of their interest for a large number of readers, but for many more it may have a contrary effect.

*The Boyhood of a Naturalist*. By Fred Smith. (Blackie.)

This is a very simple narrative of the achievements and observations of a boy who was fond of "natural history"—in other words, fond of grubbing about in the holes and corners of Nature, always finding and delighting in common objects of the country. It is a grown man's reminiscence of his boyhood, and will be thoroughly welcome to young boys who are developing similar tastes. There are no illustrations, but the book is thoroughly interesting without them.

*Beasts*. By Wardlaw Kennedy. (Macmillan.)

These papers, for the most part reprinted from the *Public School Magazine*, are written by a lover of animals for lovers of animals, and will have great attraction for boys with a naturalist turn of mind, and perhaps awaken it in others. The anthropomorphic treatment of animal life is delightful, and so is the humour, when not strained or reduced to mere punning, as is too often the case, while the continual resort to misapplied quotation is apt to mar the book for grown-up readers. But, in spite of this, everything is bright and freshly told from start to finish, and, as the author modestly suggests in his preface, "people who like this sort of thing will find this the sort of thing they like"—and we think they will be fairly numerous.

*The Making of Europe: a simple Account of the Origin and Formation of the principal Countries and States of Modern Europe*. By "Nemo." (Nelson.)

It is not quite clear for whom this easy-going history is intended—probably as much for working men whose education was neglected as for boys beginning to learn. But we are far from depreciating the writer for his simplicity. He assumes no previous knowledge in his readers; he is patiently consistent throughout; and we would certainly give the book to an adult eager to learn. It is written from an advanced democratic point of view.

*Mothers' Songs, Games, and Stories*. Translated by Frances and Emily Lord. (W. Rice.)

This is a new "Student's" edition of the English rendering of Froebel's "Mutter- und Kose-Lieder," containing all the original illustrations, as well as the music, rearranged for children's voices, with pianoforte accompaniment. The book has an interest of its own, but we should have preferred a new book for English children on similar lines.

*Christ the Protestant, and other Sermons*. By Hely Hutchinson Almond, M.A. (Blackwood.)

Mr. Almond is a Church of England headmaster of a school in which the large majority of boys are Presbyterians. These Loretto sermons take their tone, to some extent, from this rather peculiar condition of things, but we do not think that they suffer by it.

The title of the first discourse is not particularly pleasant, but, with that exception, the text of this little volume is well calculated to arrest the attention of a thoughtful boy.

*A History of the Captivity and Return of the Jews.*

By the Rev. E. J. Nurse, M.A. (Elliot Stock.)

We have here an excellent little story of the Captivity, put together from the Bible narrative and references. It is well illustrated, and has a commendatory preface by the Bishop of Coventry.

*Sand-Modelling for School and Home.* By Miss Tarbuck and H. Major, B.A. (Newmann.)

A well conceived, freely illustrated volume, intended to assist "the teaching of drawing, object-lessons, and geography." It has a number of blackboard sketches and diagrams, maps, and photographs, with practical hints and instructions.

*Elementary Brush-Work Studies.* By E. Corbet Yeats. (Philip & Sons.)

There is a sensible and useful introduction to this oblong folio of brush-work studies, and each of the two dozen plates is faced by clear directions. The book is excellent for its purpose, and can hardly fail to cultivate the artistic taste of a beginner with the brush.

*A Summary of Ransome's Short History of England.* (Longmans.)

A compact summary of the chief events of English history, suited for reference, guidance, and, at a pinch, for cramming. It is very precise and very comprehensive. For the purposes indicated it is as good as any that we know.

"Pitt Press Shakespeare for Schools."—*As You Like It.* Edited by A. W. Verity, M.A. (Cambridge University Press.)

This is at least equal to the best of Mr. Verity's previous editions. The introduction, the glossary, the extracts from Lodge's "Rosalynde," and the hints on metre are all excellent.

*The "G. S." Object Readers, Books I.-III.* (Edward Arnold.)

Geography and elementary science again, according to the requirements of the Department, for elementary schools. There are many simple progressive lessons on common things, told in simple language.

*Combined Readers in Elementary Science and Geography. Books I.-III.* By Vincent T. Murché. (Macmillan.)

Mr. Murché's industry in the production of reading-books is indefatigable. He has given us object-lessons before; but he was bound to comply with "Schedule II., Course D, Code of 1899," and he has done it very fairly.

*The Crock of Gold: Twelve Fairy Tales, Old and New.* By S. Baring-Gould. (Methuen.)

This will be a welcome book of fairy tales for lovers of the fantastical. It is somewhat clumsily set in a framework of the troubles of one Jeremiah Toope, a very inefficient schoolmaster, who was dismissed by his trustees, and took to telling stories. But that is only Mr. Baring-Gould's way. The stories themselves are entertaining, and the pictures are attractive.

We have some admirable little reprints this month. From Mr. George Allen comes a well bound and printed volume of *Readings in John Ruskin's 'Fors Clavigera'*, 1871-1884, including over a hundred ethic and didactic pieces. The same publisher sends us a *Reader's Companion to 'Sesame and Lilies'*, by W. T. Warre, M.A.—an analysis and notes which will be welcome to many. From Messrs. Macmillan we have Tennyson's *Princess*, in the familiar binding of the "Golden Treasury Series." Messrs. Chambers reprint one of the most convincing and psychologic stories of childhood, *The Story of Paul Donbey*.

As usual, Messrs. Hachette's gift books for the new year make a goodly show—in size, gay binding, plentiful illustration, lightness of subject, readable type, simple and easy French style. As we have said before, these *Jour de l'an* stories and picture-books are likely, in many cases, to be welcome to a French-reading English boy or girl. *L'Equipage de la Rosette* is a sea-fighting story, dealing with the Anglo-French War of 1793-1802, and based on the manuscript of one Jean de la Tour, the author's grandfather. This is the largest volume of the set before us, and has ninety illustrations. *La Cousine de Suzanne*, by François Deschamps, is a shorter and more domestic story, attractive and well illustrated.—*Mon Journal*, the annual volume, is a store of amusing reading for children entering on their 'teens. It is very copiously illustrated in colours and black and white.—Still more amusing fare for the little ones will be found in three coloured picture-books: *L'Alphabet de Pierrot, Dix Petits Nègres*—a free translation of our "Ten Little Nigger Boys"—very quaintly illustrated, and *Jacques Sans Mémoire*.—From the same firm we have the useful *Almanach Hachette* for 1900, quite perplexingly full of little bits of information, little utilities and facilities for almost every phase of life.

WE HAVE ALSO RECEIVED the following publications and new editions:—

*London University College Calendar, 1899-1900* (Taylor and Francis); *Who's Who, 1900* (A. & C. Black); *The Englishwoman's Year-Book*, edited by Emily Janes, 1900 (A. & C. Black); *Holloway College, Report of the Governors, 1898-9.*

*The School World, Vol. I., 1899* (Macmillan).

*The Boys' and Girls' Companion, 1899; The Church Worker, 1899; Stories on the Apostles' Creed; Lessons on Christian Doctrine and Christian Practice*, by the Rev. M. Stevenson, M.A.; *Outline Sermons on the Parables and Miracles*, by the Rev. H. D. S. Sweetapple, M.A. (Church of England Sunday School Institute).

## MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on December 16. Present: Dr. Wormell, Vice-President, in the chair; Rev. J. O. Bevan, Mr. Bowen, Mr. Brown, Mr. Butler, Mr. Chettle, Mr. Eve, Mr. Millar-Inglis, Mr. Milne, Rev. Dr. Scott, Mr. Sergeant, and Mr. Armitage Smith.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the Christmas Certificate Examinations had been held on the 5th to 9th inst., and that the number of candidates was 7,340, while the number of candidates for the Junior Forms Examination was 2,140.

He reported that the question at issue between the Council of the College and the Medical Council had not been decided at the recent meeting of that body, but had been deferred till their next meeting, in May, 1900.

The use of the College rooms was granted to the Committee of the Headmasters' Conference, for holding the meeting of the Conference on the 21st and 22nd of December.

The Report of the Examination Committee was adopted.

The Report of the Teachers' Training Committee was adopted.

The draft Report of the Council to the General Meeting was considered, and was referred to the President, Vice-Presidents, and Dean for final revision.

The Rev. J. E. Symms, M.A., Headmaster of Bancroft's School, Woodford, was elected a member of the Council to fill the vacancy caused by the death of the Rev. R. Alliott.

The following persons were elected members of the College:—

Mr. A. Anstey, B.A. Lond., L.C.P., Elmhurst School, Kingston-on-Thames.

Mr. J. Blaikie, M.A. Edin. and Camb., 6 Lancaster Road, West Norwood.

Mr. J. G. Gilchrist, M.A. Aberdeen, A.C.P., Newseat, Rothienorman, Aberdeenshire.

Mr. J. L. Holland, B.A. Lond., L.C.P., 19 Tollington Place, N.

Mr. G. F. Piggott, A.C.P., Grammar School, March, Cambs.

Mr. V. A. de Saint-Joseph, Lomas de Zamora, Argentine Republic.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHOR—Bevan's How to Save our Private Schools.

By E. ARNOLD.—Arnold's G. S. Object Readers, Books I., II., and III.; Earl's Elements of Natural Philosophy; Lehfeldt's Text-Book of Physical Chemistry.

By G. BELL & SONS.—Marchant's Translation of Thucydides, Book VI.

By BLACKIE & SON.—Gwynn's Horace, Odes, Book IV.; Walters' Tacitus, Agricola.

By W. B. CLIVE.—Grace and Rosenberg's Coordinate Geometry, Part II.

By MACMILLAN & CO.—Gregory and Simmons' Exercises in Practical Physics, Part II.; Smith and Bryant's Euclid, Books I.-IV.

Calendars of Trinity College, London, and University College, London.

## CORRESPONDENCE.

### CONFERENCE OF SCIENCE TEACHERS.

To the Editor of the Educational Times.

DEAR SIR,—I send you particulars of a very important Conference of Science Teachers which I am arranging for the Technical Education Board for Wednesday, January 10, and Thursday, January 11. I am sure, on looking through the list, you will agree with me that we have been very fortunate in securing exactly the right men to read papers on the various subjects. I shall be very glad to send tickets of admission to any teachers who may apply for them, as far as the limits of accommodation in Conference rooms will permit.—Believe me, yours very truly,

Bermundsey Settlement Lodge,  
Farncombe Street, London, S.E.

C. W. KIMMINS.

December 8, 1899.

### CONFERENCE OF SCIENCE TEACHERS.

The great success which attended the Conference of Science Teachers held during the Christmas vacation last year has encouraged the Board to arrange another, which, it is hoped, will be attended by a very large number of teachers from elementary and secondary schools. The Conference will be held on Wednesday, January 10, and Thursday, January 11, 1900, and there will be two meetings on each day from 11 to 1 and 2 to 4. The meetings on the first day will be held at the Conference Room associated with the English Education Exhibition at the Imperial Institute, and those on the second day at the Shoreditch Technical Institute, Pitfield Street, Hoxton, where the Prout-Newcombe

natural history collection will be used in connexion with the natural history section of the Conference. First meeting, Wednesday, January 10, at 11 o'clock, at the Conference Room, Imperial Institute, Exhibition Road, S.W. Chairman, the Right Hon. Sir John Lubbock, D.C.L., F.R.S., M.P. Addresses will be delivered by Prof. L. C. Miall, F.R.S., of the Yorkshire College, Leeds, on the "Teaching of Botany in Schools," and by Miss Von Wyss, of the North London Collegiate School for Girls, on "Object-Lessons in Botany." The addresses will be followed by a discussion. Second meeting, Wednesday, January 10, at 2 o'clock, at the Conference Room, Imperial Institute, Exhibition Road, S.W. Chairman, Sir Henry Roscoe, D.C.L., F.R.S., Vice-Chancellor of the University of London. An address will be delivered by Prof. H. E. Armstrong, Ph.D., F.R.S., on "Juvenile Research," with experiments by juvenile assistants and lantern slides. The address will be followed by a discussion. Third meeting, Thursday, January 11, at 11 o'clock, at the Shoreditch Technical Institute, Pitfield Street, Hoxton. Chairman, Mrs. S. Bryant, D.Sc. Addresses will be delivered by Prof. Woods Hutchinson, M.D., on "The Early Teaching of Natural History in Schools," and by Mr. J. W. Tutt, Headmaster of the Portman Place Board School, Globe Road, Stepney, E., on "Object Lessons in Natural History." The addresses will be followed by a discussion. Fourth meeting, Thursday, January 11, at 2 o'clock, at the Shoreditch Technical Institute, Pitfield Street, Hoxton. Chairman, Major-General Sir J. F. D. Donnelly, K.C.B., late Secretary of the Science and Art Department. An address will be delivered by Prof. W. Ripper, M.I.M.E., of University College, Sheffield, on "Metal Work as a Form of Manual Instruction in Schools," to be followed by a discussion, which will be opened by Mr. C. T. Millis, Principal of the Borough Polytechnic. In connexion with the Conference, it is hoped to get together a small collection of specially designed apparatus used in schools for science teaching. The assistance of teachers who have designed such apparatus is specially desired, in order to make this section of the work of the Conference as useful as possible. Free admissions will be granted to as many teachers as the Conference rooms will accommodate. Applications for tickets of admission should be made to Dr. Kimmins, Bermondsey Settlement Lodge, S.E., or to C. A. Buckmaster, Esq., 16 Heathfield Road, Mill Hill Park, W.

T. A. ORGAN, *Chairman of the Board.*  
WM. GARNETT, *Secretary of the Board.*

### OVER-PRESSURE.

*To the Editor of the Educational Times.*

SIR,—With reference to your review of our book on "Over-Pressure" and the remedies which we propose for it, will you grant us space for a few remarks on the legitimate use of anthropometrical tables in this connexion?

We have no wish to attempt any proof of a general falling off of the English race in height and massiveness, but we do maintain that the children of our professional classes who fall below Dr. Robert's very moderate standards are subnormal, that the number of such children is far too large, and that suitable regimen will restore the normal standard while assisting their intellectual progress. Dr. Robert's tables, are, as is well known, based on the measurements of many thousand children of all kinds, from primary and secondary schools, from ill fed and well fed classes, from town and country.

Now, with any table constructed on data from a *small* number of children, it is likely that the average between those above the unknown normal development and those below it may not be identical with this norm, which is the standard for comparison, and therefore it may be contended with justice that a child below this average may be but one of those who are necessary factors of the average. But, with even a few hundred children, Mr. Francis Galton has shown in his "Natural Inheritance" that some 40 per cent. are clustered in the centre of the diagram and constitute the norm, while the considerable departures above and below it are singularly evenly balanced.

With the extended data of the tables we have used, the average and the mean at each age are identical. The only correction which needs to be applied is that growth takes place unequally, height and weight seldom increasing together, but alternately, so that the curve of growth of the individual is not like the curve of normal growth, but undulates. The average or mean established by these tables is therefore a norm, and a norm which is pitched low because of the many ill nourished and defective children who have been included.

The question for the schoolmaster becomes therefore not one of statistics, but of biology. It is not, whether in any crowd of boys of one age the departures from the mean, whether above or below, are to be taken as parts of the natural variations which make an average. It is that, given the mean representing a healthy norm—in this case low—that all failure to come up to that standard indicates a misdirection or deficiency of energy.

Among the children of well-to-do parents there is a very considerable percentage which falls below this normal standard, and we adduce evidence that, in many such cases, existing school methods turn the scale against Nature, and produce tonsillar growths, headaches, pallid com-

plexions, wrinkled foreheads, frequent colds, and other "nerve-signs," which show that nerve is going and nerves coming on. It is to show the rational remedy for this state of things that our book was written.

THE AUTHORS OF "OVER-PRESSURE."

### COMMERCIAL DEPARTMENTS IN SCHOOLS.

*To the Editor of the Educational Times.*

SIR,—In the early part of this year the Technical Education Board of the London County Council published a report on commercial education, which had been prepared by a special sub-committee, and the Board have now found themselves in a position to take action based on the recommendations of that report. A few months since the Board awarded to Mr. Kahn, then an assistant-master at the Central Foundation Schools, a scholarship of the value of £150 to enable him to visit the higher commercial institutions of the Continent. He returns to England within the next few days, and it is proposed to utilize his services in the establishment of a commercial department in University College School.

A scheme, which has received the general approval of the Technical Education Board, has been prepared by the Headmaster, Mr. Paton, and the Board have undertaken to assist the new departure by an equipment grant for the provision of teaching appliances which Mr. Kahn has purchased on the Continent; by a grant of 50 per cent. on the stipend of the master of the commercial department, and by the payment of £400 a year in consideration of the County Council having the right to nominate twenty free scholars. These scholarships will be offered for competition shortly after Christmas.

T. A. ORGAN,  
Chairman, Technical Education Board  
of the London County Council.

### SLAYING THE SLAIN.

*To the Editor of the Educational Times.*

SIR,—I should be glad if you would allow me to call attention to a widespread mistake about the new (or twentieth) century. A great many people speak of the year 1900 as the first year of this new century. It is not difficult to show that this is wrong, and that the year 1900 is the last year of, and therefore belongs to, the nineteenth century.

It will hardly be disputed that there is no such year in chronology as the year 0. The symbol 0, which is the negation of quantity, cannot denote a period of twelve months, though it may mark the starting point of an era—the point at which no portion of the era has yet elapsed. If authority be wanted for such a matter as this, I may refer to Sir John Herschel's "Outlines of Astronomy," § 916 (of ed. 8). The first year of the first century of our era is A.D. 1. As a century consists of a hundred complete years, it follows that the last year of the first century is A.D. 100. The first year of the second century, therefore, is A.D. 101, and the last is A.D. 200.

We have only to carry on our counting century by century, and it will be seen that the first year of the nineteenth century is A.D. 1801, and that the last year of it is A.D. 1900. The new, or twentieth, century will not begin till A.D. 1901.—Yours truly,

Purley, December 1.

C. WINCHMORE.

[Another illustration of the obvious is this: The nineteenth century is not complete until nineteen centuries (19 × 100 years) have come to an end—that is, until the last clock-stroke of A.D. 1900. The "widespread mistake" probably springs from the fact that for a hundred years we have written 18—, and now for a hundred years we shall write 19—; and hasty-minded persons think that that ought to be conclusive as to the division of the centuries.—EDITOR.]

### LEWIS CARROLL.

*To the Editor of the Educational Times.*

SIR,—As the writer of the authorized "Life of Lewis Carroll," I hope you will allow me space in your pages to enter a protest against the title of a book recently published by Messrs. Dent. I refer to the "Story of Lewis Carroll, told for Young People by the Real Alice in Wonderland, Miss Isa Bowman."

In the first place, "The Story of Lewis Carroll" suggests that the work is a biography, whereas nineteen-twentieths of it consists of letters, poems, literary fragments, and personal reminiscences, and these only belong to the last ten or twelve years of Mr. Dodgson's life. Again, the "Real Alice in Wonderland" is Mrs. Reginald Hargreaves (Alice Liddell), and not Miss Bowman, whose sole claim to the title is the fact that, in the second production of the "Alice" play, she acted the principal part.—Yours faithfully,

S. D. COLLINGWOOD.  
The Chestnuts, Guildford, December 14, 1899.

P.S.—I notice that the name of the authoress does not appear on the cover, and this makes the phrase "the Real Alice in Wonderland," which does appear there, still more likely to mislead people.

**MATHEMATICS.**

**PTOLEMY'S Theorem derived from different expressions for the Area of the Quadrilateral.** By GEORGE SCOTT, M.A.

Let ABCD be the quadrilateral. Through C draw a parallel to BD to meet the circle in C'. Join C' to D. The new quadrilateral ABC'D is evidently equal in area to the original quadrilateral. The area

$ABC'D = \triangle ABC' + \triangle ADC'$ . The triangle ABC' has for sides lines equal to a pair of opposite sides of ABCD. The triangle ADC' has the remaining opposite sides, while the angles ABC' and ADC' are supplemental. Again, these angles are equal to the angles between the diagonals. For  $\angle COB = \angle OBA + \angle CAB$ , but  $\angle CAB = \angle CC'B$ , which is alternate and therefore equal to  $\angle C'BD$ ; therefore, since  $\angle ABD + \angle C'BD = \angle ABC'$ , this equals the angle of diagonals. The area of the quadrilateral has therefore been replaced by two triangles, each proportional to the rectangle contained by a pair of opposite sides.

But the area of the whole quadrilateral is *similarly* proportional to the area of a triangle formed by the diagonals placed at their proper angle. Therefore the rectangle of the diagonals equals sum of rectangles of opposite sides. This follows from the fact that triangles having the same or supplemental vertical angles are to one another as the rectangles under their sides.

**14298.** (E. W. REES, B.A. Oxon.)—In a triangle ABC K is the symmedian point, and AS<sub>1</sub>, BS<sub>2</sub>, CS<sub>3</sub> the symmedian lines through A, B, and C respectively; prove that

$$\frac{AK}{AS_1} + \frac{BK}{BS_2} + \frac{CK}{CS_3} = 2.$$

*Solution by the PROPOSER and R. KNOWLES.*

From K and S<sub>1</sub> draw KD, S<sub>1</sub>E perpendicular to AB. Then  $\frac{AK}{AS_1} = \frac{KD}{S_1E}$ ,

and coordinates of K are given by

$$a/a = b/b = c/c;$$

therefore  $KD = \frac{2Ac}{a^2 + b^2 + c^2}$ ;

also  $S_1E = S_1B \sin B$  and  $\frac{S_1B}{S_1C} = \frac{c^2}{b^2}$ ;

therefore  $\frac{S_1B + S_1C}{S_1B} = \frac{b^2 + c^2}{c^2}$ ;

therefore  $S_1B = \frac{c^2 a}{b^2 + c^2}$ ;

$$\therefore \frac{AK}{AS_1} = \frac{2\Delta c}{a^2 + b^2 + c^2} + \frac{c^2 a \sin B}{b^2 + c^2} = \frac{c^2 a \sin B}{a^2 + b^2 + c^2} \times \frac{b^2 + c^2}{c^2 a \sin B} = \frac{b^2 + c^2}{a^2 + b^2 + c^2}.$$

So  $\frac{BK}{BS_2} = \frac{c^2 + a^2}{a^2 + b^2 + c^2}$ , &c.;

therefore  $\frac{AK}{AS_1} + \frac{BK}{BS_2} + \frac{CK}{CS_3} = 2.$

[Mr. KELA DEVA RAU and Mr. G. D. WILSON observe that the point in question need not be the symmedian point K. It may be any point whatever in the plane of ABC.]

**5895.** (R. A. ROBERTS, M.A.)—Find the locus of the centre of gravity of an arc of the lemniscate of BERNOULLI which is of constant length.

*Solution by H. A. WEBB.*

The lemniscate being  $r^2 = a^2 \cos 2\theta$ ,  
 $ds = \sqrt{(dr^2 + r^2 d\theta^2)} = a \sqrt{(\sec 2\theta) d\theta}$ ,  
 and, if  $a\kappa$  be the constant length of the arc,

$$\int_a^\beta \sqrt{(\sec 2\theta) d\theta} = \kappa,$$

$\alpha$  and  $\beta$  being the vectorial angles of the extremity of the arc.

If  $(r, \theta)$  be the centre of gravity of the arc,

$$r \cos \theta = \frac{a}{\kappa} \int_a^\beta \cos \theta \cdot d\theta = \frac{a}{\kappa} (\sin \beta - \sin \alpha),$$

$$r \sin \theta = \frac{a}{\kappa} \int_a^\beta \sin \theta \cdot d\theta = \frac{a}{\kappa} (\cos \alpha - \cos \beta);$$

therefore  $2\theta = \alpha + \beta$ ,  $\kappa r/2a = -\sin \frac{1}{2}(\alpha - \beta)$  ..... (1).

Now the integral of  $\sqrt{(\sec 2\alpha) d\alpha} = \sqrt{(\sec 2\beta) d\beta}$  is  
 $C \cos(\alpha - \beta) + \cos(\alpha + \beta) = \pm \sqrt{(1 + C^2)}$ ,  
 where C is a constant, as may be easily verified.

Hence from (1) we have for the locus

$$C(1 - \kappa^2 r^2 / 2a^2) + \cos 2\theta = \pm \sqrt{(1 + C^2)} \dots \dots \dots (2).$$

This curve is the first positive pedal with regard to the origin of the conic  $x^2/p + y^2/q = 1$ , where p and q are given by

$$p - q = 4a^2/C\kappa^2, \quad pq = 2a^2/\kappa^2(p + q) \dots \dots \dots (3).$$

**14230.** (Professor COCHEZ.)—On donne un cercle fixe O et un point fixe A, par lequel on mène une sécante ABC. Sur AB et AC comme diamètres on décrit des circonférences  $\Sigma$  et  $\Sigma'$ . Lieu des intersections des cordes communes à O et  $\Sigma$  et à O et  $\Sigma'$  quand la sécante tourne autour de A.

*Solution by Professor A. DROZ-FARNY.*

La circonférence  $\Sigma$  coupe O en B et B'; la circonférence  $\Sigma'$  coupe O en C et C'. On sait que les axes radicaux de trois circonférences prises deux à deux se coupent en un même point. Il en résulte que BB', CC' se croisent en un point P situé sur la tangente commune en A aux deux circonférences  $\Sigma$  et  $\Sigma'$ .

On a  $PA^2 = PB \cdot PB' = PC \cdot PC'$ .

Le lieu de P est donc l'axe radical du cercle O et du cercle point A, c'est-à-dire, la droite perpendiculaire à AO qui divise en parties égales la distance entre le point A et sa polaire par rapport au cercle O.

**14346.** (I. ARNOLD.)—A cone of marble, the axis of which is 20 feet and the base diameter 6 feet, stands on the edge of its base, the axis making an angle of 60° with the horizon. What power acting vertically at the top of the cone will sustain it? What will be the direction and intensity of the least force that will keep it in equilibrium, and what inclined position will the cone be in when the sustaining force is a minimum?

*Solution by the PROPOSER.*

Let ABC be the cone, AD its axis, G the centre of gravity, and P the power applied at its vertex A. Produce AD to meet the horizontal plane HK in E, and let w be the weight of the cone. Put  $CD = a = DB$ ,  $AD = 4b$ ,  $DG = b$ ,  $\angle BAD = \alpha$ ,  $BEA = \beta$ , and  $DAP = \theta$ .

Now, if Gw cut HK in I, we have

$$BE = a \cos \beta, \quad DE = a \cot \beta,$$

$$GE = b + a \cot \beta;$$

hence we get

$$EI = EG \cos \beta = b \cos \beta + a \cos \beta \cot \beta,$$

and therefore

$$BI = BE - EI = a \sin \beta - b \cos \beta.$$

Again,  $BA = 4b \sec \alpha$ , and  $\angle BAP = \theta - \alpha$ , and therefore the perpendicular from B upon direction of the force P is

$$4b \sec \alpha \sin(\theta - \alpha) = 4b(\sin \theta - \tan \alpha \cos \alpha),$$

and, taking moments about B, we have

$$w(a \sin \beta - b \cos \beta) = P \cdot 4b(\sin \theta - \tan \alpha \cos \theta).$$

[The rest in Volume.]

**5963.** (Professor MOHEL.)—On donne une sphère S, un plan P et un point A; par le point A on mène une droite qui rencontre le plan P en un point B, puis, sur AB comme diamètre, on décrit une sphère S'; le plan radical des sphères S et S' rencontre la droite AB et un point M: (1) Trouver le lieu décrit par le point M quand la droite AB tourne autour du point A; (2) discuter le lieu précédent en supposant que le point A se déplace dans l'espace, le plan P et la sphère S restant fixes.

*Solution by MAURICE GEORGI.*

Soient  $x^2 + y^2 + z^2 - R^2 = 0$  l'équation de la sphère S et  $Z = h$  l'équation du plan P. Soit  $(x - x_0)/a = (y - y_0)/\beta = (z - z_0)/\gamma$  la droite AB. Les coordonnés de B sont donc

$$x_1 = x_0 - \{a(h - z_0)/\gamma\}, \quad y_1 = y_0 - \{\beta(h - z_0)/\gamma\}, \quad z_1 = h.$$

La sphère décrite sur cette droite comme diamètre sera (X)  
 $x^2 + y^2 + z^2 - [x_0 - \{a(h-z_0)/\gamma\}]x - [y_0 - \{b(h-z_0)/\gamma\}]y - (x+z_0)z$   
 $+ \frac{1}{2}([x_0 - \{a(h-z_0)/\gamma\}]^2 + [y_0 - \{b(h-z_0)/\gamma\}]^2 + (z_0+h)^2)$   
 $- (x_0 - \frac{1}{2}[x_0 - \{a(h-z_0)/\gamma\}])^2 - (y_0 - \frac{1}{2}[y_0 - \{b(h-z_0)/\gamma\}])^2$   
 $- \{z_0 - \frac{1}{2}(z_0+h)\}^2 = 0.$

[The rest in Volume.

**14339.** (Professor U. C. GHOSH.)—A particle of mass  $m$  is suspended by a fine inelastic string of length  $a$ , fastened to a fixed point A. It is attached to another string which passes through a small ring at O (whose perpendicular distance from the vertical through A is  $b$ ), and carries a mass  $m'$  at the other end. Prove that, if the particle  $m$  is let go when it is vertically below A, (1) its velocity, when the string to which it is attached has described an angle  $\theta$ , is

$$\left\{ \frac{2g \left[ m' \left\{ b - (b^2 + 4a^2 \sin^2 \frac{1}{2} \theta - 2ab \sin \theta)^{\frac{1}{2}} \right\} - ma(1 - \cos \theta) \right]}{m + \frac{m'(a \sin \theta - b \cos \theta)^2}{b^2 + 4a^2 \sin^2 \frac{1}{2} \theta - 2ab \sin \theta}} \right\}^{\frac{1}{2}};$$

(2) just at the instant when particle  $m$  crosses the line AO,  $m'$  has no velocity, and that of  $m$  is

$$(2g)^{\frac{1}{2}} \left[ m'/m \left\{ b + a - (a^2 + b^2)^{\frac{1}{2}} \right\} - a \left\{ 1 - a/(a^2 + b^2)^{\frac{1}{2}} \right\} \right];$$

(3) if  $v$  and  $v'$  be the velocities of particles  $m$  and  $m'$  at any instant,

$$v' = \frac{a \sin \theta - b \cos \theta}{(b^2 + 4a^2 \sin^2 \frac{1}{2} \theta - 2ab \sin \theta)^{\frac{1}{2}}} v.$$

Solution by G. BIRTWISTLE, B.A., B.Sc.; and H. W. CURJEL, M.A.

Let B be the initial position of the particle  $m$  (P). [The result given assumes that the ring O is in the same horizontal as B; though this is omitted from the Question.]

The equation of vis viva is

$$mv^2 + m'v'^2 = -2mga(1 - \cos \theta) + 2m'g(b - OP) \dots (1),$$

$$\text{and } OP^2 = (b - a \sin \theta)^2 + a^2(1 - \cos \theta)^2 = b^2 + 4a^2 \sin^2 \frac{1}{2} \theta - 2ab \sin \theta.$$

The velocity of P resolved along OP =  $v \sin APO$ , and this must =  $v'$ , and  $OP \sin APO = b \cos \theta - a \sin \theta$ .

$$\text{Therefore } v' = \frac{v \cdot b \cos \theta - a \sin \theta}{(b^2 + 4a^2 \sin^2 \frac{1}{2} \theta - 2ab \sin \theta)^{\frac{1}{2}}} \dots (2).$$

[The rest in Volume.]

**14165.** (Professor CROFTON, F.R.S.)—If  $8n+1$  is prime, prove that  $n^n - 2^n$  is divisible by  $8n+1$  if  $n$  is even. Also  $n^n + 2^n$  is divisible by  $8n+1$  if  $n$  is odd.

Solution by H. W. CURJEL, M.A.

$$(8n)^n \equiv (-1)^n \equiv (-1)^n 2^{4n} \pmod{8n+1},$$

since 2 is a quadratic residue

$$\equiv (-16)^n; \text{ therefore } n^n \equiv (-2)^n \pmod{8n+1},$$

i.e.,  $n^n - 2^n$  is divisible by  $8n+1$  if  $n$  is even, and  $n^n + 2^n$  is divisible by  $8n+1$  if  $n$  is odd.

**14348.** (JAMES S. LAWSON.)—Show how to construct a square which shall have two adjacent sides passing through two given points, and the intersection of the diagonals at a third given point. Show that there are generally two solutions.

Solution by J. H. TAYLOR, M.A.; and ROBERT BRYANT, D.Sc.

[This is a particular case of the description of a square about a given quadrilateral.—*Pitt Press Euclid*, Miscellaneous Examples on Book IV., p. 243, No. 74.]

Let A, B be the given points on adjacent sides, and O the centre of the required square. Join AB, and upon this, as diameter, describe a circle ADB; draw diameter D'C'D at right angles to AB. Join OD and let it meet the circumference again in E. Then  $\angle BEA$  is a right angle, and  $\angle BED$ , standing on a quadrant, is half a right angle; therefore EDO is semi-diameter of required square. Produce AO, BO to A', B' so that AA', BB' are bisected in O. Produce EA, EB to meet parallels to EB, EA, respectively, through B', A'. This figure is a square required.

If OD' be joined, cutting circle in E',  $\angle AE'B$  is a right angle, and AE', BE' are the produced sides of another square, of which E'O is a semi-diagonal.

**14351.** (Rev. T. MITCHELSON, B.A.)—Show that the sums of the series  $\sum \sin n\beta$  and  $\sum \cos n\beta$ , when carried to  $\frac{1}{2}(n-2)$  terms, are equal,  $n$  being even and  $n\beta = \pi$ .

Solution by Rev. T. ROACH, M.A.; and the PROPOSER.

$$\sum \sin n\beta / \sum \cos n\beta \text{ to } \frac{1}{2}(n-2) \text{ terms} = \sin \frac{1}{2}(n\beta) / \cos \frac{1}{2}(n\beta) = 1 \text{ if } n\beta = \pi.$$

**14349.** (SALUTATION.)—A rectangular card lies concealed between the pages of a book, but is so placed that three of its corners are on the inner, outer, and lower edges of the book respectively. The inner corner being used as a fixed centre, the outer corner is wheeled round until it again coincides with the outer edge of the book, when the fourth corner is found on the upper edge. The pages being  $a$  by  $b$  inches, and the distance between the two positions of the outer corner of the card being  $2c$  inches, find the dimensions of the card, and state the necessary limits of the values given.

Solution by H. W. CURJEL, M.A.

Let  $b$  be the length of the edge in which a corner of the card is fixed. Let  $x$  and  $y$  be the length and breadth of the card. Cut the page along the two positions of the diagonal of the card through this point, removing an isosceles triangle of base  $2c$  and height  $a$ ; turn one of the remaining pieces over and place the two diagonal cuts together, and we get a kite-shaped figure formed by two right-angled triangles, with a common hypotenuse and sides  $x$  and  $y$  inscribed in a rectangle of sides  $b-c$ ,  $a$ . And it is clear that

$$x^2 + y^2 = a^2 + c^2 \text{ and } \frac{2xy}{\sqrt{(a^2 + c^2)}} = (b-c) \frac{\sqrt{(a^2 + c^2)}}{a} \text{ or } 2xy = \frac{b-c}{a} (a^2 + c^2).$$

Hence  $x$  and  $y$  can be found if  $a$  is not less than  $b-c$ , their values being

$$\text{given by } \frac{1}{2} \sqrt{\left( \frac{a^2 + c^2}{a} \left\{ (a+b-c)^2 \pm (a-b+c)^2 \right\} \right)}.$$

QUESTIONS FOR SOLUTION.

**14420.** (Professor G. B. MATHEWS, F.R.S.)—Let  $p$  be any odd prime:

$$X = \left(\frac{1}{2}p\right)^4 + \left(\frac{3}{2}p\right)^4 + \left(\frac{5}{2}p\right)^4 + \dots + \left\{ \frac{1}{2}(2p-5)p \right\}^4 + \frac{1}{2}(p-1),$$

$$Y = (p)^4 + (2p)^4 + (3p)^4 + \dots + \{(p-2)p\}^4,$$

where only the integral parts of the surds are to be taken; thus, if  $p=3$ ,

$$X = \left(\frac{3}{2}\right)^4 + 1 = 2, \quad Y = (3)^4 = 1,$$

and so on. Prove that, when  $p$  is of the form  $4n+1$ , the integers X, Y are equal; but, if  $p$  is of the form  $4n+3$ , X is greater than Y.

Examples:—  $p=3, 5, 7, 11, 13, 17, 19,$

$$X = 2, 8, 20, 62, 88, 160, 206,$$

$$Y = 1, 8, 19, 59, 88, 160, 203.$$

**14421.** (Professor IGNACIO BEYENS, M.A., Lt.-Col. du Génie.)—Soient O, A, B trois points sur une droite donnée; par le point O on mène une droite quelconque OX et l'on détermine sur cette dernière le point M tel que l'angle AMB soit maximum; et, si l'on fait la même construction pour tous les droites qui passent par O, déterminer le lieu géométrique des points M.

**14422.** (Professor E. LEMOINE.)—Soient deux triangles ABC, A'B'C' dont j'appelle les côtés  $a, b, c; a', b', c'$ . Je suppose ABC fixe. Ils sont tels que  $a$  et  $a'$  sont perpendiculaires ainsi, que  $b$  et  $c'$  et que  $c$  et  $b'$ . Cela posé, si ABC et A'B'C' sont homologues, le lieu du centre O d'homologie est une conique D circonscrite à ABC; si ABC et B'C'A' sont homologues, le lieu est une conique D' circonscrite à ABC; si ABC et C'A'B', le lieu est une conique D'' circonscrite à ABC. Les trois coniques D, D', D'' ont pour point commun le point de TARRY du triangle ABC. Déterminer le triangle A'B'C' qui est en même temps des centres d'homologie O, O', O'' avec ABC, c'est à dire que ABC et A'B'C' soient trihomologues. Remarquons que par leur construction ABC et A'B'C' sont toujours triorthologiques.

**14423.** (Professor SANJANA.)—In the triangle ABC the circle DEF is inscribed, and Da, Eb, Fc are the perpendiculars of the triangle DEF; A', B', C' are the mid-points of BC, CA, AB. Prove that the triangles ABC, A'B'C',  $a\beta\gamma$  have the same axis of perspective, whose equation is

$$\sum aa(s-a)(b-c) = 0.$$

This line contains the points

$$1/a : 1/b : 1/c \text{ [the centre of perspective of } ABC, A'B'C'],$$

$$r_1 : r_2 : r_3 \text{ [the centre of perspective of } ABC, a\beta\gamma],$$

$$bc(b+c)r_1 : ca(c+a)r_2 : ab(a+b)r_3$$

[the centre of perspective of A'B'C',  $a\beta\gamma$ ],

$$\text{and } 1/a(s-a) : 1/b(s-b) : 1/c(s-c) \text{ [the Gergonne point of } ABC].$$

14424. (Professor NEUBERG.)—Trouver le lieu des centres des hyperboles équilatères qui ont une corde normale commune MN.

14425. (Professor U. C. GHOSH.)—Prove that

$$\int_0^{\pi} x \phi(\sin x) dx = \frac{1}{2} \pi \int_0^{\pi} \phi(\sin x) dx,$$

and hence evaluate  $\int_0^{\pi} \frac{x \sin x (1 - \sin^n x)}{1 - \sin x} dx.$

14426. (Professor COCHEZ.)—Courbe  $\tan \omega = \rho^2/(1 - \rho^2).$

14427. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—On the diameter of a circle of unit radius is described the ellipse  $3x^2 + 4y^2 = 12$ , of which S, H are foci; and on SH as minor axis is described another ellipse, of which the area is the same as that of the first ellipse, and of which the foci are S' and H'; then a circle is described on S'H' as diameter. Find the area common to this circle and to the two ellipses.

14428. (Professor N. BHATTACHARYA.)—If  $r$  represent the length of a quadrant of the cardioid  $r = a(1 + \cos \theta)$ , and  $s'$  the quadrant of its first positive pedal, show that  $ss' = 6\pi a^2.$

14429. (D. BIDDLE.)—Let  $N = 2\Delta n + 1$ , where  $\Delta$  is a small prime;  $S_1$  the integral portion of  $\sqrt{Nx}$ , where  $x$  is composite;  $d$  some single digit, even or odd with  $n$ . What are the limits of  $x$  satisfying the formula  $x = (2S_1 - n + d)/(2\Delta)$ ? [In the case of  $N = 329554457$ , where  $\Delta = 11$ , the formula is satisfied by 680820, and 680289, for  $x$ ; in the former  $d = 2$ , in the latter  $d = 4$ .]

14430. (J. A. THIRD, D.Sc.)—A conic, whose centre is O, touches the sides BC, CA, AB of a triangle at X, Y, Z, and O' is the point of concurrence of AX, BY, CZ. Show that O bears to ABC the same relation that the isotomic conjugate of O' bears to the anticomplementary triangle of ABC (the triangle formed by parallels through A, B, C to the opposite sides).

[The Proposer desires the latter part of Quest. 14371 to be altered to the following:—(2) that if A'B'C' be a variable triangle in perspective with ABC with respect to P as centre of perspective, and such that C'A' passes through D, and A'B' through E, then A'B'C' and ABC are triply in perspective, DEF being an axis of perspective; (3) that one of the variable centres of perspective lies on K'; and (4) that the corresponding axis of perspective touches K. Consider the case when K' is the STEINER ellipse of ABC.]

14431. (Rev. W. ALLEN WHITWORTH, M.A.)—Show that the alteration which takes place in the year 1900, in the places of the golden numbers in the Gregorian Kalendar, reduces the frequency with which the Collect, &c., for the Sixth Sunday after the Epiphany is required in the ratio 203 : 188; the expectation of its being required having been hitherto  $\frac{1}{3}$  in February and  $\frac{1}{3}$  in November, but henceforward  $\frac{1}{3}$  in February and  $\frac{1}{3}$  in November; these expectations being calculated from theory and not by counting actual occurrences. [Following is the rubric after the Gospel for the Twenty-Fifth Sunday after Trinity, and upon which the question is based:—“If there be any more Sundays before Advent Sunday, the Service of some of those Sundays that were omitted after the Epiphany shall be taken in to supply so many as are here wanting. And if there be fewer, the overplus may be omitted: provided that this last Collect, Epistle, and Gospel shall always be used upon the Sunday next before Advent.”]

14432. (R. TUCKER, M.A.)—FSQ is a focal chord of a parabola, and PQR is the maximum triangle in the segment cut off by PQ. Prove that the equation to the circle PQR is

$$8(x^2 + y^2) - 2(7p^2 + 20)ax + p(3p^2 - 4)ay + 6p^2a^2 = 0,$$

where  $p = m - 1/n$  (P is  $am^2, 2am$ ).

The locus of the centre is a cubic, and, if O is the fourth point of section, the locus of the mid-point of OR is a parabola and the envelope of the chord OR is another parabola.

14433. (R. F. DAVIS, M.A.)—Using ordinary trilinear coordinates, prove that the straight lines

$$-\beta/\gamma = e^{iA}, \quad -\gamma/\alpha = e^{iB}, \quad -\alpha/\beta = e^{iC}; \quad \text{where } i^2 = -1,$$

countersect in a point simultaneously lying upon the straight line at infinity, and upon the circle circumscribing the triangle of reference ABC, which must consequently be one of the focioids (imaginary circular points at infinity). The trilinear coordinates of the other focoid will be found by changing the sign of  $i$ . Find the conditions that the general equation of the second degree should represent a circle in the form of six non-symmetrical relations between the coefficients.

14434. (EDWARD V. HUNTINGTON, A.M.)—An astroid, two nephroids, and four cardioids are drawn on the same fixed circle of radius  $a$ , their cusps lying at the quadrantal points of the circle. Prove: a line of length  $2a$  sliding between either pair of opposite cardioids envelopes that nephroid which has the same cusps; and a line of length  $3a$  sliding between the two nephroids envelopes the astroid. (Nephroid = two-cusped epicycloid, astroid = four-cusped hypocycloid.)

14435. (R. C. ARCHIBALD, M.A.)—Find the equation of the cardioid in trilinear coordinates, and show that its equation in Boothian coordinates, cusp origin, is  $27a^2(\xi^2 + \eta^2) = 4(1 + a\xi)^2.$

14436. (Rev. T. ROACH, M.A. Suggested by 14376.)—If  $I, I_1, I_2, I_3,$

be in- and ex-centres of a triangle ABC, and  $o_1, o_2, o_3$  circumcentres of  $I_2I_3, I_1I_3, I_1I_2$  respectively, prove that  $o_3I_1o_2I_3o_1I_2$  is an equilateral hexagon, and find the value of its angles.

14437. (R. P. PARANJPEY, B.A.)—Show that there are six conics passing through three given points and having contact of the second order with a given conic; and, further, that these six conics all touch a quartic having the three points as nodes.

14438. (G. H. HARDY, B.A.)—Evaluate

$$\int_0^{\pi} \log(\cos \alpha - \cos x)^2 dx, \quad P \int_0^{\pi} \frac{x \sin x}{\cos \alpha - \cos x} dx,$$

and  $P \int_0^{\pi} \frac{(\sin \alpha - \sin x)^n}{(\cos \alpha - \cos x)^{n+1}} dx, \quad n = 0, 1, 2, \dots;$

the symbol P denoting the principal value of the integral in question.

14439. (H. MACCOLL, B.A.)—There are five possible hypotheses,  $H_1, H_2,$  &c., of which one must be, and only one can be, true; the chance of each being one-fifth. Each of the three  $H_1, H_2, H_3$  implies that the chance that a statement A is true is  $\frac{1}{2}$ ; whereas  $H_4$  and  $H_5$  lead each to the conclusion that this chance is  $\frac{1}{6}$ . From these data prove the paradoxical (but not absurd or impossible) conclusion that it is probable but not true that A is probable; and show that the chances that A is probable and true, probable but not true, true but not probable, neither probable nor true, are respectively  $\cdot 312, \cdot 288, \cdot 024, \cdot 376.$

14440. (F. H. PEACHELL, B.A.)—It is well known that the velocity of sound rises with the temperature. In metal organ-pipes, this is counter-balanced to a certain extent by the expansion of the metal. Find the coefficient of expansion of a metal such that the pitch of an organ-pipe built of it should remain the same for ordinary ranges of temperature.

14441. (Rev. T. MITCHESON, B.A.)—A regular polygon of an even number of sides is inscribed in a circle, and lines are drawn from one of the angular points to each of the others. Show that the sum of these lines =  $(a \cot \pi/2n)/(\sin \pi/n)$  ( $a$  being a side of the polygon), and if the lines be  $h_1, h_2, h_3,$  &c., then

$$\frac{1}{2}(h_{n-1} + h_{n-2} + h_{n-3} + \dots) - \{h_{1(n-2)} + h_{1(n-4)} + h_{1(n-6)} + \dots\} = R.$$

14442. (J. J. BARNVILLE, B.A.)—Having  $u_{n-1} + u_{n+1} = 10u_n$ , prove that

$$\begin{aligned} \frac{1}{1+1} + \frac{1}{9+1} + \frac{1}{89+1} + \frac{1}{881+1} + \dots &= \frac{\sqrt{6}}{4}, \\ \frac{1}{1+1} - \frac{1}{11-1} + \frac{1}{109+1} - \frac{1}{1079-1} + \dots &= \frac{1}{\sqrt{6}}, \\ \frac{1}{1+5} - \frac{1}{5+5} + \frac{1}{49+5} - \frac{1}{485+5} + \dots &= \frac{1}{12}, \\ \frac{1}{3+5} + \frac{1}{19+5} + \frac{1}{187+5} + \frac{1}{1851+5} + \dots &= \frac{\sqrt{6}+1}{20}, \\ \frac{1}{11+5} + \frac{1}{107+5} + \frac{1}{1059+5} + \dots &= \frac{\sqrt{6}-1}{20}, \\ \frac{1}{1+\sqrt{3}} + \frac{1}{5+\sqrt{3}} + \frac{1}{49+\sqrt{3}} + \dots &= \frac{\sqrt{3}+\sqrt{2}-1}{4}. \end{aligned}$$

14443. (R. KNOWLES.)—F, S are the foci of a rectangular hyperbola; from a point T on the circle whose diameter is FS, tangents TP, TQ are drawn to meet the curve in PQ; the circle TPQ cuts the curve again in CD; prove that (1) the diagonals of the quadrilateral PQCD intersect in the axis; (2) two of its sides are parallel.

14444. (P. MILNES.)—A conic cuts the sides of triangle ABC in D, D', E, E', F, F' respectively; AD, AD' intersect the conic again in d, d'; BE, BE' in e, e'; CF, CF' in f, f'. Show that the intersections of dd', ee', ff' with the polars of A, B, C respectively are collinear.

14445. (Rev. J. CULLEN.)—Prove that

$$q^{2^q-1} - 1 \equiv 0 \pmod{q^2 + 1},$$

if  $q^2 + 1$  be a prime.

14446. (D. EDWARDS, B.A.)—The following reasoning and incorrect result are given in LAURENT'S *Traité d'Analyse*, Tome I., p. 212 (1885):—

$$\text{“On a } dz = p dx + q dy, \quad d^2z = p d^2x + q d^2y + r dx^2 + 2s dx dy + t dy^2,$$

où, si l'on fait  $d^2z = 0, \quad d^2x = 0, \quad dy = \frac{dz - p}{q} dx,$

$$0 = q d^2y + r dx^2 + 2s dx \left( \frac{dz - p}{q} dx \right) + t \left( \frac{dz - p}{q} dx \right)^2.$$

Résolvant par rapport à  $d^2y$ , on en conclut

$$\frac{d^2y}{dx dz} = -\frac{1}{q} \left( \frac{2s}{q} - 2 \frac{p}{q^2} t \right).”$$

Point out the fallacy, and correct, using the notation of differentials.

14447. (H. W. CURJEL, M.A.)—If  $f(x)$  is finite and continuous for all positive finite values of  $x$  except a finite number of values, then

$$\int_0^{\infty} \sin \{f(x)\} dx \quad \text{and} \quad \int_0^{\infty} \cos \{f(x)\} dx$$

are convergent or divergent according as limit  $\lim_{x \rightarrow \infty} \frac{f(x)}{x}$  is infinite or finite ; except in the case where limit  $\lim_{x \rightarrow \infty} f(x) = 0$  or  $n\pi$ , when  $\int_0^{\infty} \sin \{fx\} dx$  may be convergent, and the case where limit  $\lim_{x \rightarrow \infty} f(x) = \frac{1}{2}\pi$  or  $(2n+1)\frac{1}{2}\pi$ , when  $\int_0^{\infty} \cos \{fx\} dx$  may be convergent.

**14448.** (V. SRINIVASA RANGACHARI, B.A.)—OA, OB are two straight lines fixed in direction, and P any point within or without them. It is required to draw through P a straight line so that the part of it intercepted between the given straight lines may be of given length.

**14449.** (PAUL GIBSON.)—Given that in reducing  $1/N$  ( $N$  prime) in scale 17 to a pure circulator five consecutive remainders formed are 1e, 4, 9, 21, 5 (in scale 17) to find  $N$ .

#### OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**6348.** (The late W. S. B. WOOLHOUSE, F.R.A.S.)—If five points be taken at random on the surface of a regular pentagon, prove that the probability that they will be the apices of a convex pentagon is  $\frac{7}{9} - 10\sqrt{5}$ .

**6349.** (ELIZABETH BLACKWOOD.)—Given that  $x, y, z$  are each between the limits 1 and  $-1$ , and that  $3x + 2y + z, 2x + y + 3z, x + 3y + 2z$  are each between the limits 3 and  $-3$ ; required all the limits of  $x, y, z$ .

**6350.** (W. J. C. MILLER, B.A.)—If P, Q be two random points inside a circle whose centre is O, find the average of (1) the perimeter, (2) the area, (3) the sum of the squares on the sides, of the triangle OPQ; also the respective probabilities that, in one such random triangle, the said (4) perimeter, (5) area, (6) sum of squares, will be less than given magnitudes.

**6351.** (The late Dr. HOPKINSON, F.R.S.)—Parallel rays are incident on a refracting sphere, and emerge after one internal reflexion; show (1) that, provided the sphere be more refractive than the surrounding medium, the caustic will have two sheets with a common asymptotic cone, and that one sheet terminates in a cusp, the other abruptly in a circle; and (2) trace the caustic when the sphere is less refractive than the surrounding medium.

**6361.** (Professor W. H. H. HUDSON, M.A.)—A paraboloid of revolution floats with the lowest point of its base in the surface of a fluid, and its axis inclined at an angle  $\theta$  to the horizon; find its height and specific gravity.

**6364.** (W. E. WRIGHT, B.A.)—If A, B, C be the angles of a plane triangle, find the minimum value of  $\cot A + \cot B + \cot C$ .

#### NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

**NOTICE.**—Vol. LXXI. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

#### THE LONDON MATHEMATICAL SOCIETY.

Thursday, December 14, 1899.—Professor Elliott, Vice-President, in the Chair, and subsequently Dr. Macaulay and Dr. J. Larmor. Eight members present.

Professor Edalji, Ahmedabad, Professor W. M. Strong, Yale College, and Mr. R. W. H. T. Hudson, of St. John's College, Cambridge, were elected members.

Mr. Tucker announced the recent decease of Major-General F. Close, R.A., elected April 13th, 1871.

The Auditor's report was read, and on the motion of Dr. Macaulay, seconded by Mr. W. F. Sheppard, the Treasurer's report was adopted, and votes of thanks were passed to the Auditor (Mr. E. G. Gallop) and to the Treasurer.

The following papers were communicated:—

(1) "A Method of extending the Accuracy of certain Mathematical Tables," (2) "Central Difference Formulæ," Mr. W. F. Sheppard.

"Circular Cubics," Mr. A. B. Bassot.

"The Theorem of Residuation, being a General Treatment of the Intersections of Plane Curves at Multiple Points," Dr. F. S. Macaulay.

"The Genesis of the Double Gamma Functions," Mr. E. W. Barnes.

"On the Expression of Spherical Harmonics as Fractional Differential Coefficients," Mr. J. Rose Innes.

"Sums of Greatest Integers," Mr. G. B. Mathews

## WORKS

BY THE

## Rev. G. HUGH JONES.

### Higher Scripture Teaching: St. Luke.

Price 1s. 6d.

### Lesson Papers in Religious Knowledge: St. Matthew.

Price 6d.

"Very scholarly work may be brought within easy grasp of those average pupils who seem very imperatively to need a guiding hand in the preparation of their divinity lessons." *School World.*

"Will be found a useful book by those preparing for examinations." *Christian.*

"Should prove eminently serviceable to candidates for examinations in religious knowledge." *Schoolmaster.*

"Mr. Hugh Jones has done well in making his references always to the 'Cambridge Bible for Schools.'" *School Guardian.*

"To point out the exact information which University Local examiners consider candidates should possess for 'Pass' or 'Distinction.'" *School Board Chronicle.*

"The idea of the book seems to be thoroughly good and useful." *Dean Wickham, D.D.*

"Your work favourably impresses me." *Bishop of Calcutta.*

"Likely to stimulate to a thoughtful reading of the Gospel." *Rev. A. R. Vardy, M.A.*

"Have the great merit of limiting and fixing the attention of the student." *J. M. D. Meiklejohn, M.A.*

"I have found your book of real and valuable help with my class." *Headmaster of Gresham Grammar School.*

"I have found your 'St. Luke' so helpful in teaching that I should be glad to think we might hope for another Gospel on the same lines." *A Lady Principal (Dorset).*

"I was much pleased with your 'St. Luke,' which I used in College last term." *A. C. Dixon, B.A., B.Sc., Lond.*

"I have used your book of notes, and found it very helpful in teaching." *Headmistress (Liverpool).*

LONDON: SIMPKIN, MARSHALL, & CO.

## CASEY'S EUCLID.

### THE ELEMENTS OF EUCLID.

BOOKS I.—VI., and PROPOSITIONS I.—XXI. of BOOK XI. Together with Appendix on the CYLINDER, SPHERE, CONE, &c., with Copious Annotations and Numerous Exercises. By JOHN CASEY, LL.D., F.R.S., Fellow of the Royal University of Ireland, Vice-President, Royal Irish Academy, &c., &c. Tenth Edition, price 4s. 6d., post free; or in Two Parts, each Half-a-Crown.

### A KEY TO THE EXERCISES

IN THE SIX BOOKS OF CASEY'S "ELEMENTS OF EUCLID." By JOSEPH B. CASEY, Tutor, University College, Dublin. Second Edition. Small 8vo, price 6s.

### A SEQUEL TO THE

FIRST SIX BOOKS OF THE "ELEMENTS OF EUCLID." Sixth Edition, Revised and greatly Enlarged, price 3s. 6d., cloth. Now ready.

Now Ready, Second Edition. Revised and Enlarged, 564 pp., price 12s.

### A TREATISE ON THE

### ANALYTICAL GEOMETRY

OF THE POINT, LINE, CIRCLE, AND THE CONIC SECTIONS. Containing an account of its most recent Extensions, with numerous Examples. New Edition. Crown 8vo.

### A TREATISE ON

### ELEMENTARY TRIGONOMETRY.

With numerous Examples and Questions for Examination.

Third Edition. Small 8vo, 148 pp., price 3s.

### KEY TO THE EXERCISES

IN THE TREATISE ON ELEMENTARY TRIGONOMETRY.

With numerous Examples and Questions. Second Edition. Price 3s.

### A TREATISE ON

### PLANE TRIGONOMETRY.

Containing an account of Hyperbolic Functions, with numerous Examples.

Crown 8vo, Second Edition.

Crown 8vo, price 5s.

### A TREATISE ON

### SPHERICAL TRIGONOMETRY,

AND ITS APPLICATION TO GEODESY AND ASTRONOMY.

With numerous Examples.

HODGES, FIGGIS, & CO., LIMITED, 104 GRAFTON STREET, DUBLIN.

LONDON: LONGMANS & CO.

# Blackie & Son's Publications.

## Blackie's New Illustrated Latin Series.

Edited by Prof. R. Y. TYRRELL, Litt.D., D.C.L.,  
Examiner to the Universities of London and Glasgow, &c.

Each Volume is furnished with interesting Introduction, Explanatory Notes, and full Vocabularies, and is illustrated with numerous Maps, Plans, and authentic Drawings from Coins, Gems, Statues, and other objects of ancient art. Crown 8vo, cloth. The following Volumes are now ready:—

- CICERO.—THE FIRST CATILINE ORATION.** Edited by C. HAINES KEENE, M.A. 1s. 6d.  
**CICERO.—THE CATILINE ORATIONS (Complete).** Edited by C. HAINES KEENE, M.A. 2s. 6d.  
**HORACE.—THE ODES.** Books I.-IV. Edited by STEPHEN GWYNN, B.A. With or without Vocabulary. 1s. 6d. each.  
**TACITUS.—AGRICOLA.** Edited by W. C. FLAMSTEAD WALTERS, M.A. With or without Vocabulary. 1s. 6d.  
**LIVY.** Book V. Edited by W. CECIL LAMING, M.A. With or without Vocabulary. 2s. 6d.  
**EUTROPIUS.** Books I. and II. Edited by W. CECIL LAMING, M.A. This should prove the most attractive edition of this portion of Eutropius yet published. The text is printed in large type, and lavishly illustrated. The notes also are printed in a larger type than is usual, and are very clearly and simply expressed.

\* \* Other Volumes in preparation.

## French.

### NEW FRENCH BOOKS.

- MY FIRST FRENCH BOOK.** By MARGUERITE NINET. Illustrated. Cloth, 1s.  
 A little book of easy anecdotes, stories, and sketches, in large type, for very young children, with pictures to each lesson, and complete vocabularies.  
**LES DEUX BOSSUS.** Edited by EMILE B. LE FRANÇOIS. With a Frontispiece by ALICE B. WOODWARD. Small crown 8vo, cloth, 1s.  
**SONGS OF BERANGER.** Edited, with Introduction, Notes, &c. by GEORGE H. ELY, B.A. Small crown 8vo, cloth, 1s.  
**GEORGE SAND'S LES AILES DE COURAGE.** Adapted and Edited, with Notes and Vocabulary, by B. PROPER. 1s. 6d.  
**PRIMER OF HISTORICAL FRENCH GRAMMAR.** With a Chapter on Metre. By ERNEST WEEKLEY, M.A. (Lond.), Professor of French at University College, Nottingham. 2s. 6d.  
*Notes and Queries* says:—"An eminently satisfactory historical French grammar. It is a thoroughly workmanlike production, trustworthy in all respects."

## New English Classics.

- MACAULAY.—ESSAY ON HORACE WALPOLE.** Edited by JOHN DOWNIE, M.A.  
**POPE.—RAPE OF THE LOCK.** Edited by FREDERICK RYLAND, M.A. Crown 8vo, cloth, 1s. 6d.  
**POPE.—ESSAY ON CRITICISM.** Edited by FREDERICK RYLAND, M.A. Crown 8vo, cloth.  
**TENNYSON.—SELECT POEMS.** Edited, for Schools, by AGNES WILSON. In Three Books, paper, 2d. each; cloth, 3d. each.  
 1: **MORTE D'ARTHUR. THE LADY OF SHALOTT.**  
 2: **MARIANA. DORA. THE MAY QUEEN.**  
 3: **THE DAY DREAM. THE DEATH OF THE OLD YEAR. THE CHARGE OF THE LIGHT BRIGADE.**  
**BROWNING.—SELECT POEMS.** Edited, with Introduction, Notes, &c., by E. H. BLAKENEY, M.A. Paper cover, 2d.; cloth, 3d.  
**SCOTT.—MARMION.** Canto III. Edited, with Introduction, Notes, &c., by W. KEITH LEASK, M.A. Paper, 3d.; cloth, 4d. Another Canto of Mr. Keith Leask's excellent edition.

## Science.

- FIRST STEPS IN EARTH KNOWLEDGE.** Being an Introduction to *Physiography*. By J. ANSTED HARRISON. Edited by W. JEROME HARRISON, F.G.S. 2s. 6d.  
**AN INTRODUCTION TO ANALYTICAL CHEMISTRY.** By Prof. G. G. HENDERSON, D.Sc., M.A., F.I.C., and M. A. PARKER, B.Sc. 5s.

## Science and Art.

COMPLETE LIST OF BOOKS ON APPLICATION.

## FOR EXAMINATIONS, 1900, 1901.

1. **Cambridge Locals, 1900.**
2. **Cambridge Higher Locals, 1901.**
3. **Oxford and Cambridge Schools, 1900.**
4. **College of Preceptors, 1900.**

## English.

- SHAKESPEARE.—AS YOU LIKE IT.** Edited by J. C. SMITH, M.A. 1s. 6d. [*Warwick Shakespeare.*]  
**SHAKESPEARE.—AS YOU LIKE IT.** Edited by LIONEL W. LYDE, M.A. 8d. [*Junior School Shakespeare.*]  
**SHAKESPEARE.—RICHARD THE SECOND.** Edited by C. H. HERFORD, Litt.D. 1s. 6d. [*Warwick Shakespeare.*]  
**SHAKESPEARE.—MIDSUMMER NIGHT'S DREAM, A.** Edited by EDMUND K. CHAMBERS, B.A. 1s. 6d. [*Warwick Shakespeare.*]  
**SHAKESPEARE.—CORIOLANUS.** Edited by EDMUND K. CHAMBERS, B.A. 1s. 6d. [*Warwick Shakespeare.*]  
**MILTON.—PARADISE LOST.** Edited by F. GORSE, M.A. Feap. 8vo, cloth. Books I. II. and III., 1s. each.  
**SCOTT.—THE LAY OF THE LAST MINSTREL.** Edited, with Introduction, Notes, &c. Cantos I.-VI. Feap. 8vo, cloth, 1s.  
**SCOTT.—MARMION.** Cantos I. and VI. Edited, with Introduction, Notes, &c. Feap. 8vo. Each, paper, 3d.; cloth, 4d.  
**MACAULAY.—THE PROPHECY OF CAPYS.** Edited, with Introduction, Notes, &c. Feap. 8vo, paper, 2d.  
**MACAULAY.—ARMADA, IVRY, &c.** Edited, with Introduction, Notes, &c. Feap. 8vo, paper, 2d.; cloth, 3d.  
**HIGHER ENGLISH.** An Outline of English Language and Literature. By DAVID CAMPBELL. 1s. 6d.  
 "The book is as full of information as the proverbial egg. . . It is an admirable little work."—*Journal of Education.*  
**SYNOPTICAL GEOGRAPHY OF THE WORLD.** A Concise Handbook. With a complete series of Maps. 1s.  
 "It is a mine of useful and well arranged information."—*Glasgow Herald.*  
**LANDMARKS IN ENGLISH INDUSTRIAL HISTORY.** By G. TOWNSEND WARNER, M.A. Crown 8vo, cloth, 5s.  
**ENGLISH ETYMOLOGY.** A Select Glossary, serving as an Introduction to the History of the English Language. By F. KLUGE and F. LUTZ. Demy 8vo, cloth, 5s. net.  
 Prof. C. H. HERFORD, Litt.D., says:—"Kluge and Lutz . . . ought to have a good sale in England, being unquestionably the most scientific book of English philology and derivation accessible to the English reader; it at the same time covers the whole field of the alphabet."  
**A NEW SEQUEL TO EUCLID.** By Prof. W. J. DILWORTH, M.A. 2s. 6d. Part I., Exercises on the first Three Books, 1s. Part II., More Difficult Exercises on the first Four Books, and Exercises on Book Six, 2s.

## Latin and Greek.

- CAESAR.—THE GALLIC WAR.** Books IV., V., and VI. Edited, with Introduction, Notes, and Appendices, &c., by Prof. JOHN BROWN. With numerous Illustrations, Plans, and Maps. 1s. 6d. each.  
**HORACE.—THE ODES.** Books I.-IV. Edited by STEPHEN GWYNN, B.A. Illustrated. 1s. 6d. each. [*Book III. nearly ready.*]  
**PHAEDRUS.—SELECTIONS from Books I. and II.** Edited, with Introduction, Notes, &c., by S. E. WINBOLT, B.A. 1s.  
**EUTROPIUS.** Books I. and II. Edited, with Introduction, Notes, Exercises, &c., by W. CECIL LAMING, M.A. Illustrated. [*In January.*]  
**EURIPIDES.—THE MEDEA.** Edited by P. HALCOMBE, M.A., King's College, Cambridge. *The Lyric parts omitted, but an English translation supplied.* Illustrated. 1s. 6d.  
**LATIN UNSEENS.** Graduated Specimens of Prose and Verse selected mainly from Examination Papers. Junior Section, 3d.; Intermediate Section, 4d.; Senior Section, 6d.  
**GREEK UNSEENS.** Junior Section, 4d.; Senior Section, 8d.  
**LATIN GRAMMAR PAPERS.** Selected from Oxford and Cambridge Local and London Matriculation Examination Papers. By A. C. LIDDELL, M.A. 1s.

## French and German.

- A FIRST FRENCH COURSE.** By J. J. BEUZEMAKER, B.A. 1s. 6d.  
**A FIRST GERMAN COURSE.** By A. R. LECHNER. 1s. 6d.  
**A COMPREHENSIVE FRENCH MANUAL.** For Students Reading for Examinations. By OTTO C. NAF, M.A. Crown 8vo, cloth, 3s. 6d.  
**A COMPLETE COURSE OF FRENCH COMPOSITION AND IDIOMS.** By HECTOR REY, B.ES L., B.ES SC. 3s. 6d.  
**FRENCH UNSEENS.** Junior Section, 3d.; Middle Section, 1s.; Senior Section, 1s. 6d.  
**GERMAN UNSEENS.** Junior Section, Selected, 4d.

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY.

## COLLEGE OF PRECEPTORS.— EXAMINATIONS FOR 1900.

1. **DIPLOMAS.**—The next Examination of Teachers for the Diplomas of the College will commence on the 10th of July, 1900.—At the Midsummer Examination, persons who have previously passed in Theory and Practice of Education at the Diploma Examination may be examined practically for Certificates of Ability to Teach.

2. **CERTIFICATE EXAMINATIONS.**—The Midsummer Examination for Certificates will commence on the 3rd of July, 1900.

3. **JUNIOR FORMS EXAMINATIONS.**—The Midsummer Examination will commence on the 3rd of July, 1900.

4. **PROFESSIONAL PRELIMINARY EXAMINATIONS.**—These Examinations are held in March and September. The next Examination will commence on the 6th of March, 1900.

5. **INSPECTION AND EXAMINATION OF SCHOOLS.**—Visiting Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

### PRIZES.

**Diploma Examination.**—In addition to the Doreck Scholarship of £20, the following Prizes will be competed for:—Theory and Practice of Education, £10; Classics (Greek and Latin), £5; Mathematics, £5; Natural Science, £5.

**Certificate Examination.**—The "Isbister Prize" will be awarded to the Candidate who stands First, and the "Pinches Memorial Prize" to the Candidate who stands Second, in General Proficiency. Prizes will also be awarded to the Third and Fourth in General Proficiency, and to the First and Second in the following subjects:—Classics, Mathematics, Modern Languages, Natural Sciences, English Subjects. The "Taylor-Jones Memorial Prize" will be awarded to the best Candidate in Scripture History. Two Medals will be awarded to the best Candidates in Shorthand.

The Regulations for the above Examinations can be obtained on application to the Secretary at the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., *Secretary.*

**PRELIMINARY EXAMINATION of MEDICAL STUDENTS.**—The COLLEGE OF PRECEPTORS will hold an Examination for Certificates recognized by the Education Department, the Incorporated Law Society, the General Medical Council, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, and other bodies, on the 6th, 7th, and 8th of March, 1900.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool.

Examination Fee, 25s.

Regulations and Entry Forms may be obtained on application to the Secretary of the College of Preceptors, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., *Secretary.*

## COLLEGE OF PRECEPTORS.— EXTRACT FROM THE BY-LAWS.

Section II., clause 5.—"The Council may grant the privileges of Membership, without payment, to holders of Diplomas of the College, as long as such persons are engaged in teaching in Secondary Schools."

Holders of the College Diplomas who are not Members of the College are requested to send their Addresses to the Secretary of the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., *Secretary.*

## COLLEGE OF PRECEPTORS.— (Bloomsbury Square, W.C.)

The next Monthly Evening Meeting of the Members will take place on Wednesday, the 14th of February, when Professor FOSTER WATSON, M.A., will read a Paper entitled "The Licensing of Teachers in the Past." The Chair will be taken at 7.30 p.m., and a discussion will follow the reading of the Paper. Members have the privilege of introducing their friends.

C. R. HODGSON, B.A., *Secretary.*

## COLLEGE OF PRECEPTORS.— (Bloomsbury Square, W.C.)

### LECTURES FOR TEACHERS.

The First Course of Lectures (Twenty-eighth Annual Series), by JAMES SULLY, M.A., LL.D., Grote Professor of the Philosophy of Mind and Logic in University College, London, on "Intellectual Education," will commence on Thursday, February 22nd, at 7 p.m.

For Syllabus, see p. 115.

\* \* A Doreck Scholarship, of the value of £20, will be awarded at the Diploma Examination at Christmas next, to the candidate who, having attended two courses of the Training Class Lectures during the preceding twelve months, and having passed the full examination for a College Diploma, stands first in the examination in Theory and Practice of Education.

The Fee for the Course is Half-a-guinea.

The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

Members of the College have Free Admission to this Course.

C. R. HODGSON, B.A., *Secretary.*

## LONDON COLLEGE OF MUSIC.— (Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

FOR MUSICAL EDUCATION, AND EXAMINATIONS  
IN PRACTICAL AND THEORETICAL MUSIC.

Patron: HIS GRACE THE DUKE OF LEEDS.

Dr. F. J. KARN, Mus. Bac. Cantab., Principal.

G. AUGUSTUS HOLMES, Esq., Director of Examinations.

EXAMINATIONS in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 350 Provincial Centres in April next, when certificates will be granted to all successful candidates. Last day for entry, March 15.

The Higher Examinations for Diplomas of Associate (A.L.C.M.), Associate in Music (A.Mus.L.C.M.), Licentiate (L.L.C.M.), Licentiate in Music (L.Mus.L.C.M.), and Fellowship take place in July and December.

THE NEW SYLLABUS for the year 1900, containing important alterations (including the new Primary section in Pianoforte Playing), is now ready and may be had on application.

In the Educational Department students are received and thoroughly trained under the best professors at moderate fees. Day and Evening Classes are held.

T. WEEKES HOLMES, *Secretary.*

### UNIVERSITY DIPLOMA FOR WOMEN.

THE UNIVERSITY OF ST. ANDREWS grants Diploma and Title of L.L.A. to WOMEN.

The Salters' Company Research Fellowship, of the annual value of £100.

Particulars of the above and of the full curriculum are given in the Prospectus, which may be obtained from the MEDICAL SECRETARY, St. Thomas's Hospital, London, S.E.

H. P. HAWKINS, M.A., M.D. Oxon., *Dean.*

## THE LONDON HOSPITAL MEDICAL COLLEGE.

The Hospital is the largest general hospital in the kingdom and contains nearly 800 beds.

Appointments:—Sixty qualified resident appointments are made annually. Dressers, clinical and post-mortem clerks, and maternity assistants are appointed every three months. All appointments are free. Holders of resident appointments are also provided free board.

SCHOLARSHIPS AND PRIZES.—Entrance Scholarships, value £120, £60, £60, £35, £30, and £20, will be offered for competition at the end of September. Numerous Scholarships and Prizes are given annually.

FEES.—120 guineas in one payment, or 130 guineas by instalments. A reduction of 15 guineas is allowed to the sons of members of the profession.

The Students' Clubs Union, embracing all the Scientific, Social, and Athletic Clubs, is available to all Students. The Clubs Union ground is at Lower Edmonton.

### SPECIAL CLASSES.

Special Classes are held in the subjects required for the PRELIMINARY SCIENTIFIC M.B. (London) EXAMINATION.

Botany and Zoology.—By P. Chalmers Mitchell, M.A. Oxon., F.Z.S.

Chemistry and Physics.—By Hugh Candy, B.A., B.Sc. Lond.

Fee for the whole Course, 10 guineas.

These Classes are not confined to Students of the Hospital.

Students who have recently passed the Matriculation or other preliminary Examinations can enter at once.

For further information apply, personally or by letter, to

MUNRO SCOTT, *Warden.*

Mile End, E.

## GOUIN SCHOOL OF LANGUAGES, 34 HARRINGTON ROAD, SOUTH KENSINGTON, 16 FINSBURY CIRCUS, CITY.

Principal—F. THÉMOIN, B.A.

Teachers trained on the Gouin Series Method. Classes in French, German, Italian at reduced fees to Teachers.

## CHARING CROSS HOSPITAL MEDICAL SCHOOL.

The Livingstone Scholarship (100 guineas), the Huxley Scholarship (55 guineas) and six other Entrance Scholarships, including one of 30 guineas for Dental Students (total value £550) are awarded annually.

Two Scholarships of the value of 60 guineas each are reserved for Students of Oxford, Cambridge, or London Universities.

FEES.—For the five years' curriculum of study required by the various Examining Bodies and for hospital practice, 110 guineas in one sum, or 121 guineas in five instalments.

The composition fee for sons of registered medical practitioners is 100 guineas, and the fee by instalments, 110 guineas in five payments.

The composition fee for Dental Students is 54 guineas, or 60 guineas, payable in two instalments of 30 guineas each.

A proportionate reduction of the above Fees is made to Students who have completed part of the curriculum elsewhere.

CHARING CROSS HOSPITAL is within three minutes' walk of the Dental Hospital of London, and the hours of Lectures are arranged to suit the convenience of both General and Dental Students.

The Hospital and School are situated within two minutes of both Charing Cross Stations, and the Athletic Ground at Eltham can be reached within half an hour from Charing Cross.

**THE SCHOOL PROSPECTUS, containing full information concerning the classes, prizes, and all other arrangements connected with the Medical School, will be sent on application to the Dean, Chandos Street, Strand, W.C.**

H. MONTAGUE MURRAY, *Dean.*

## THE DENTAL HOSPITAL OF LONDON MEDICAL SCHOOL,

LEICESTER SQUARE.

### LECTURES.

*Dental Anatomy and Physiology* (Human and Comparative)—Charles S. Tomes, F.R.S., M.A. Oxon., F.R.C.S., L.D.S., on Tuesdays and Thursdays, at 5 p.m. (Summer). (*Demonstrator*—A. Hopewell Smith, L.R.C.P., M.R.C.S., L.D.S.)

*Dental Surgery and Pathology*—William Hern, M.R.C.S., L.D.S., on Tuesdays and Fridays, at 8 a.m. (Summer). (*Demonstrator*—R. Hirschell, L.D.S.)

*Mechanical Dentistry*—E. Lloyd Williams, L.R.C.P., M.R.C.S., L.D.S., L.S.A., on Wednesdays, at 5.30 p.m. (Winter).

*Metallurgy and its application to Dental Purposes*—Dr. Forster Morley, M.A., F.I.C., F.C.S., on Thursdays, at 5 p.m. (Winter). (*Demonstrator*—Percy Richards, F.I.C., F.C.S.)

The Hospital is open both morning and afternoon.

During the Sessions the Surgeons of the day will give demonstrations at stated hours.

The Medical Tutor holds classes before each Examination for the L.D.S.

The House Surgeons attend daily while the Hospital is open.

The Saunders and Walker Scholarships, of £20 per annum each, and prizes are open for competition.

Fee for two years' Hospital Practice required by the curriculum, including Lectures, £50 in one payment, or 50 guineas in two yearly instalments. The curriculum requires two years to be passed at a General Hospital. The fee for this is about £55. Both Hospitals can be attended simultaneously.

The Fee for Three Years' Tuition in Mechanical Dentistry is 150 guineas.

The Calendar may be obtained on application to the DEAN, who attends at the Hospital on Wednesday mornings from 10.30 till 12 throughout the year.

MORTON SMALE, *Dean.*

## ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

The SUMMER SESSION will begin on May 1st, 1900.

FIVE ENTRANCE SCHOLARSHIPS and EXHIBITIONS are offered for competition on September 26th and following days, viz.: Two of the value of £75, one of the value of £150, one of the value of £50, and one £20; and Students who enter in May are eligible. Other Scholarships and Prizes, including the Lawrence, Brackenbury, Kirkes, and Matthews Duncan Scholarships in Medicine, Midwifery, and Surgery, are awarded annually. The total value of Scholarships and Prizes awarded is over £800 per annum.

A RESIDENTIAL COLLEGE is provided so as to afford students the advantage of living within the Hospital walls.

All the APPOINTMENTS are open to students without additional fees.

Special Laboratories and other arrangements have been provided to give the necessary additional instruction required by the new regulations, and the courses of study have been so arranged that students may with advantage begin in the Summer Session.

Special Classes are held for the Preliminary Scientific and all the other Examinations for the M.B. and M.D. (London).

For particulars apply to Dr. CALVERT, Warden of the College, St. Bartholomew's Hospital, E.C. Handbook forwarded on application.

## GUY'S HOSPITAL MEDICAL SCHOOL.

The SUMMER SESSION will begin on May 1st, 1900.

(Students who have recently passed the College of Preceptors Examination are advised to enter forthwith to prepare for the Conjoint Examinations in July next.)

The Hospital contains 644 Beds, of which 554 are in constant occupation.

ENTRANCE SCHOLARSHIPS.—Five Scholarships will be competed for in September, 1900—Two in Arts of the value of £100 and £50, and Three in Science of the value of £150, £60, and £50. Students who enter in May, if otherwise eligible, are able to compete.

APPOINTMENTS.—Hospital appointments are made strictly in accordance with the merits of the candidates, and without extra payment.

DENTAL SCHOOL.—A recognized Dental School is attached to the Hospital, which affords to Students all the instruction required for a Licence in Dental Surgery.

PRIZES AND SCHOLARSHIPS are awarded to Students in their various years, amounting in the aggregate to more than £650.

RESIDENTIAL COLLEGE.—The Residential College accommodates about 50 students in addition to the Resident Staff of the Hospital. It contains a large Dining Hall, Reading Room, Library, and Gymnasium for the use of the Students' Club.

For Prospectus, particulars of the Scholarships, and further information, apply to the Dean, Dr. LAURISTON E. SHAW, Guy's Hospital, London Bridge, S.E.

## ROYAL COLLEGES OF SURGEONS AND PHYSICIANS OF EDINBURGH, AND FACULTY OF PHYSICIANS AND SURGEONS OF GLASGOW.

Copies of Regulations for the Triple Qualification of this Board (L.R.C.S.E., L.R.C.P.E., and L.F.P. & S.G.), containing dates of Professional Examinations for year 1899-1900, Curriculum, &c., may be had on application to JAMES ROBERTSON, Solicitor, 48 George Square, Edinburgh, Inspector and Treasurer for Edinburgh; or from ALEXANDER DUNCAN, B.A., LL.D., Faculty Hall, 242 St. Vincent Street, Glasgow, Inspector and Treasurer for Glasgow. In applying for copies, please state the date of commencement of medical study.

## KING'S COLLEGE, LONDON.—

Students received in Arts and Science, Engineering, Architecture, and Applied Sciences, Medicine, and other branches of education. Preparation for London and other Examinations. Day and Evening classes.

Students are classed on entrance according to their proficiency, and terminal reports on the progress and conduct of Matriculated Students are sent to their parents and guardians. There are Entrance Scholarships and Exhibitions.

Students who are desirous of studying any particular subject or subjects, without attending the complete courses of the various faculties, can be admitted as non-matriculated students on payment of the separate fees for such classes as they select.

Residence of Students.—There will be a few rooms vacant in the College next Term.

For prospectuses and all information apply to the SECRETARY, King's College, Strand, W.C.

**UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.**  
(A Constituent College of the University of Wales.)  
*Principal—H. R. REICHEL, M.A.*

The Session began October, 3rd, 1899. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts student, £11. 1s.; ditto for Intermediate Science or Medical student, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (beginning September 19), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the Prospectus, apply to **JOHN EDWARD LLOYD, M.A.**,  
*Secretary and Registrar.*

**UNIVERSITY COLLEGE OF WALES, ABERYSTWYTH.**  
(One of the constituent Colleges of the University of Wales.)

**TRAINING DEPARTMENT FOR SECONDARY TEACHERS, MEN AND WOMEN.**

**JOINT AGENCY FOR WOMEN TEACHERS.**

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

**THE JOINT AGENCY FOR MEN TEACHERS.**

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

- Headmasters' Conference.
- Incorporated Association of Headmasters.
- College of Preceptors.
- Teachers' Guild.
- Welsh County Schools' Association.
- Private Schools' Association.
- Association of Headmasters of Preparatory Schools.
- Association of Headmasters of Roman Catholic Schools.
- Assistant-Masters' Association.
- Association of Technical Institutions.
- &c.

The rates of Commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

**EDUCATIONAL AGENCY.**

(ESTABLISHED OVER 60 YEARS).

Proprietors:—

Messrs. GRIFFITHS, SMITH, POWELL & SMITH.

OFFICES—34 Bedford Street, Strand; and 22 Henrietta Street, Covent Garden, London, W.C.

LONDON: FRANCIS HODGSON, 89 FARRINGTON STREET, E.C.

New and Revised Edition, small crown 8vo, price 2s.

**AN INTRODUCTION TO GEOMETRY.**

FOR THE USE OF BEGINNERS.

CONSISTING OF

**EUCLID'S ELEMENTS, BOOK I.**

ACCOMPANIED BY NUMEROUS EXPLANATIONS, QUESTIONS, AND EXERCISES.

By JOHN WALMSLEY, B.A.

This work is characterized by its abundant materials suitable for the training of pupils in the performance of original work. These materials are so graduated and arranged as to be specially suited for class-work. They furnish a copious store of useful examples from which the teacher may readily draw more or less, according to the special needs of his class, and so as to help his own method of instruction.

**OPINIONS OF THE PRESS.**

"We cordially recommend this book. The plan adopted is founded upon a proper appreciation of the soundest principles of teaching. We have not space to give it in detail, but Mr. Walmsley is fully justified in saying that it provides 'for a natural and continuous training to pupils taken in classes.'"—*Athenaeum*.

"The book has been carefully written, and will be cordially welcomed by all those who are interested in the best methods of teaching Geometry."—*School Guardian*.

"Mr. Walmsley has made an addition of a novel kind to the many recent works intended to simplify the teaching of the elements of Geometry. . . . The system will undoubtedly help the pupil to a thorough comprehension of his subject."—*School Board Chronicle*.

"When we consider how many teachers of Euclid teach it without intelligence, and then lay the blame on the stupidity of the pupils, we could wish that every young teacher of Euclid, however high he may have been among the Wranglers, would take the trouble to read Mr. Walmsley's book through before he begins to teach the First Book to young boys."—*Journal of Education*.

"We have used the book to the manifest pleasure and interest, as well as progress, of our own students in mathematics ever since it was published, and we have the greatest pleasure in recommending its use to other teachers. The Questions and Exercises are of incalculable value to the teacher."—*Educational Chronicle*.

KEY to the above, price 3s.

LONDON: FRANCIS HODGSON, 89 FARRINGTON STREET E.C.

FREE GUIDE TO THE  
CAMBRIDGE HIGHER LOCAL EXAMINATION,

"The book should occupy a prominent and useful position."—*British Trade Journal*.

LONDON: E. MARLBOROUGH & CO., 51 OLD BAILEY, E.C.

SHORT FRENCH EXAMINATION PAPERS (110),

Each containing Six Idiomatic Sentences to render into French.

Price 2s. 6d., cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

"A very useful set of questions."—*Modern Language Quarterly*.

"The English idioms for translation into French are well chosen. It is a useful little book."—*University Correspondent*.

"The exercises in the use of idioms are specially good."—*Bookman*.

"Will be found serviceable for rapid drill in the hands of a judicious teacher."—*Educational Times*.

"Would afford useful practice for intending candidates."—*Education*.

"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*Journal of Education*.

"We are great advocates of abundant exercises; hence our immediate approval of this book."—*School Guardian*.

"We have much pleasure in recommending this useful collection of papers in grammar and idiomatic sentences. It will save the teacher many an hour of labour, and would be valuable for a class entering for an examination to work through steadily."—*Educational Review*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers. 6s. net. (A list of errata is issued with this.)

By H. R. LADELL, M.A., F.R.G.S.

THE PUBLIC SCHOOL SPELLING CARD.

Thirtieth Thousand. Price 6d. By the same Author.

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than fifteen years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

French Essentials and French Conversation Sentences.

Second Edition. Price 2s. cloth; 1s. 6d. boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education*.

"Students preparing for examination in French grammar and composition will know the worth of this little book. The colloquial sentences at the end are a useful addition."—*Bookman*.

### A Short History of English Literature. By Prof. G. SAINTSBURY. 8s. 6d.

**Shakespeare.—As You Like It.** With Introduction and Notes. By K. DEIGHTON. 1s. 9d.

**Scott.—The Lay of the Last Minstrel.** With Introduction and Notes. By G. H. STUART, M.A., and E. H. ELLIOT, B.A. Cantos I. to III., 1s. 3d.; sewed, 1s.

**Macaulay.—Lays of Ancient Rome.**—With Introduction and Notes. By W. T. WEBB, M.A. 1s. 9d. (Contains the Prophecy of Cupys, Ivry, and the Armada.)

**English Grammar.** By Rev. R. MORRIS. 1s.

**Exercises on Morris's Primer of English Grammar.** By JOHN WETHERELL, M.A. 1s.

**English Grammar Exercises.** By R. MORRIS, LL.D., and H. C. BOWEN, M.A. 1s.

**Elementary Lessons in Historical English Grammar.** By Rev. R. MORRIS, LL.D. 2s. 6d.

**A Method of English for Secondary Schools.** By JAMES GOW, Litt.D., Headmaster of the Nottingham High School. 2s.

**A First Book in Writing English.** By E. H. LEWIS, Ph.D. 3s. 6d.

**Primer of English Composition.** By Prof. NICHOL. 1s.

**Questions and Exercises on English Composition.** By Prof. NICHOL and W. S. M'CORMICK. 1s.

**Principles of English Composition through Analysis and Synthesis.** By P. GOYEN, Inspector of Schools, New Zealand. 2s. Key 4s. net.

**Primer of English Literature.** By STOPFORD BROOKE, M.A. 1s.

**A First Sketch of English History.** Part I.: 449–1307. Part II.: 1307–1689. Part III.: 1689–1895. By E. J. MATHEW, M.A. 2s. each. Complete in One Volume, 3s. 6d.

**History of England.** By EDITH THOMPSON. 2s. 6d.

**A History of England for Beginners.** By A. B. BUCKLEY. 3s.

**A Primer of English History.** By A. B. BUCKLEY. 1s.

**Short History of the English People.** By J. R. GREEN, M.A. 8s. 6d. Also, in FOUR PARTS, with Analysis. I.: 607–1265. II.: 1265–1540. III.: 1540–1689. IV.: 1660–1873. 3s. each.

**A Short Geography of the British Islands.** By J. R. GREEN, LL.D., and A. S. GREEN. With Maps. 3s. 6d.

**Geography of the British Isles.** By Sir A. GEIKIE, F.R.S. 1s.

**The Elementary School Atlas.** By J. BARTHOLOMEW, F.R.G.S. 1s.

**Class-Book of Geography.** By C. B. CLARKE, F.R.S. 2s. 6d.; sewed, 2s.

**Class-Book of General Geography.** By H. R. MILL, D.Sc. 3s. 6d.

**Geography of Europe.** By J. SIME, M.A. Illustrated. 2s.

**Geography of India, Burma, and Ceylon.** By H. F. BLANFORD. 2s.

**Geography of Africa.** By EDWARD HEAWOOD. 2s. 6d.

**Man and his Markets.** By LIONEL W. LYDE. Illustrated. 2s.

**Easy Arithmetical Exercises for Beginners.** By J. G. BRADSHAW, M.A. 2s. With Answers, 2s. 6d.

**A School Arithmetic.** By R. F. MACDONALD. 2s. 6d.

**Arithmetic in Theory and Practice.** By J. BROOKSMITH, LL.B. 4s. 6d. KEY, 10s. 6d.

**Arithmetic for Beginners.** By J. and E. J. BROOKSMITH. 1s. 6d. KEY, 6s. 6d.

**Arithmetic for Beginners.** By J. and E. J. BROOKSMITH. 1s. 6d. KEY, 6s. 6d.

**Arithmetic for Beginners.** By J. and E. J. BROOKSMITH. 1s. 6d. KEY, 6s. 6d.

**Arithmetic for Beginners.** By J. and E. J. BROOKSMITH. 1s. 6d. KEY, 6s. 6d.

**Arithmetic for Beginners.** By J. and E. J. BROOKSMITH. 1s. 6d. KEY, 6s. 6d.

**Arithmetic for Beginners.** By J. and E. J. BROOKSMITH. 1s. 6d. KEY, 6s. 6d.

**Arithmetic for Beginners.** By J. and E. J. BROOKSMITH. 1s. 6d. KEY, 6s. 6d.

**Arithmetic for Beginners.** By J. and E. J. BROOKSMITH. 1s. 6d. KEY, 6s. 6d.

**Arithmetic for Beginners.** By J. and E. J. BROOKSMITH. 1s. 6d. KEY, 6s. 6d.

### Manual of English Grammar and Composition. Price 2s. 6d., cloth.

A guide to Parsing and Analysis, Composition, the Figures of Speech, Enlargement of the Vocabulary by Affixes and Metaphors, the main divisions of Prose Composition, the peculiarities of Poetic Diction, and an outline of the History of the Language. With copious and carefully graded Exercises.

A full account of Modern English Grammar, some peculiarities of Idiom and Construction, the Origin and Growth of English, a History of Sounds, Symbols, Spellings, and Accents, the Growth of Accidence from Anglo-Saxon and other sources, the origin and use of Prefixes and Suffixes. With Appendices on Prosody, Synonyms, the Changed Meanings of Words, and other outlying subjects. With copious and carefully graded questions selected from the London Matriculation Examinations.

### Rules and Examples in Arithmetic. By Rev. T. DALTON, M.A. With Answers, 2s. 6d.

**Arithmetic for Schools.** By S. L. LONEY, M.A. With and without Answers. 4s. 6d. Examples, 3s. Answers, 6d.

**Arithmetic for Schools.** By Rev. BARNARD SMITH, M.A. 4s. 6d. KEY, 8s. 6d.

\* \* \* The same, Revised by Prof. W. H. H. Hudson, 4s. 6d.

**Arithmetic for Schools.** By Rev. J. B. LOCK, M.A. New Edition, Revised and Enlarged. 4s. 6d. Examples, 3s. Answers, 6d.

**Arithmetic for Beginners.** By Rev. J. B. LOCK, M.A. 2s. 6d. KEY, 8s. 6d.

**Arithmetical Exercises and Examination Papers.** By H. S. HALL, M.A., and S. R. KNIGHT, B.A. 2s. 6d.

**Shilling Book of Arithmetic for National and Elementary Schools.** By Rev. BARNARD SMITH, M.A. Answers, 6d. With Answers, 1s. 6d. KEY, 4s. 6d.

**Shilling Book of Arithmetic for National and Elementary Schools.** By Rev. BARNARD SMITH, M.A. Answers, 6d. With Answers, 1s. 6d. KEY, 4s. 6d.

**Shilling Book of Arithmetic for National and Elementary Schools.** By Rev. BARNARD SMITH, M.A. Answers, 6d. With Answers, 1s. 6d. KEY, 4s. 6d.

**Shilling Book of Arithmetic for National and Elementary Schools.** By Rev. BARNARD SMITH, M.A. Answers, 6d. With Answers, 1s. 6d. KEY, 4s. 6d.

**Shilling Book of Arithmetic for National and Elementary Schools.** By Rev. BARNARD SMITH, M.A. Answers, 6d. With Answers, 1s. 6d. KEY, 4s. 6d.

**Rules and Examples in Algebra.** By Rev. T. DALTON, M.A. Part I., 2s. Part II., 2s. 6d. KEY to Part I., 7s. 6d.

**Algebraical Exercises.** By Rev. C. A. JONES, M.A., and C. H. CHEVNE, M.A. 2s. 6d. SOLUTIONS, 7s. 6d.

**Algebra for Beginners.** By I. TODHUNTER. New Edition, thoroughly Revised by S. L. LONEY, M.A. 3s. 6d. With Answers, 4s. 6d. KEY, 8s. 6d.

**Algebra for Beginners.** By I. TODHUNTER, F.R.S. 2s. 6d. KEY, 6s. 6d.

**Elementary Algebra.** By C. SMITH, M.A. 4s. 6d. KEY, 10s. 6d.

**A Treatise on Algebra.** By C. SMITH, M.A. 7s. 6d. KEY, 10s. 6d.

**Algebra for Beginners.** By H. S. HALL, M.A., and S. R. KNIGHT, B.A. 2s. With Answers, 2s. 6d.

**Elementary Algebra for Schools.** By H. S. HALL, M.A., and S. R. KNIGHT, B.A. Seventh Edition, 3s. 6d. With Answers, 4s. 6d. Answers, 1s. KEY, 8s. 6d.

**Algebraical Exercises and Examination Papers.** By the Same. 2s. 6d.

**Higher Algebra.** By the Same. 7s. 6d. KEY, 10s. 6d.

**A Text-Book of Euclid's Elements.** By H. S. HALL, M.A., and F. H. STEVENS, M.A. Globe 8vo. Book I., 1s.; Books I. and II., 1s. 6d.; Books I.–III., 2s. 6d.; sewed, 2s.; Books II. and III., 2s.; Books I.–IV., 3s.; Books III.–IV., 2s.; Books III.–VI., 3s.; Books IV.–VI., 2s. 6d.; Books V.–VI., XI., and XII., Props. 1, 2, 2s. 6d.; Books I.–VI., XI., XII., and Props. 1, 2, 4s. 6d.; Book XI., 1s. KEY to Books I.–IV., 6s. 6d. KEY to VI. and XI., 3s. 6d. KEY to I.–VI. and XII., 8s. 6d.

**A First Step in Euclid,** consisting of the First Twelve Propositions. By J. G. BRADSHAW, B.A. 1s. 6d.

**Euclid's Elements of Geometry.** By CHARLES SMITH, M.A., and SOPHIE BRYANT, D.Sc. Book I., 1s.; Books I. and II., 1s. 6d.; Books III. and IV., 2s.

**Exercises in Euclid, Graduated and Systematised.** By W. WEEKS, 3s.; or separately—Book I., 1s.; Books I.–III., 1s. 9d.; Books I.–VI., 1s. 9d. Complete, 3s.

**The Elements of Euclid.** By I. TODHUNTER, F.R.S. New Edition. Revised by S. L. LONEY, M.A. 4s. 6d. Books I. and II., 1s. 6d.; Books I.–IV., 3s.

**The Elements of Euclid.** By I. TODHUNTER, F.R.S. 3s. 6d. Books I. and II., 1s. KEY, 6s. 6d.

**Practical Plane and Solid Geometry.** By J. HARRISON, M.Inst.M.E., and G. A. BAXANDALL. Elementary. 2s. 6d.

**Practical Plane and Solid Geometry.** By J. HARRISON, M.Inst.M.E., and G. A. BAXANDALL. Elementary. 2s. 6d.

**Practical Plane and Solid Geometry.** By J. HARRISON, M.Inst.M.E., and G. A. BAXANDALL. Elementary. 2s. 6d.

**Practical Plane and Solid Geometry.** By J. HARRISON, M.Inst.M.E., and G. A. BAXANDALL. Elementary. 2s. 6d.

**Practical Plane and Solid Geometry.** By J. HARRISON, M.Inst.M.E., and G. A. BAXANDALL. Elementary. 2s. 6d.

**Practical Plane and Solid Geometry.** By J. HARRISON, M.Inst.M.E., and G. A. BAXANDALL. Elementary. 2s. 6d.

**Practical Plane and Solid Geometry.** By J. HARRISON, M.Inst.M.E., and G. A. BAXANDALL. Elementary. 2s. 6d.

**Practical Plane and Solid Geometry.** By J. HARRISON, M.Inst.M.E., and G. A. BAXANDALL. Elementary. 2s. 6d.

# MACMILLAN & CO.'S EDUCATIONAL PUBLICATIONS—(Continued).

*Text-books suitable for the College of Preceptors and other Examinations.*

- First Lessons in Book-keeping.** By J. THORNTON. 2s. 6d. KEY, 10s. 6d.

- General Knowledge Examination Papers.** By A. M. M. STEDMAN, M.A. Third Edition.
- Key,** Second Edition (issued as above), 7s. net.

## CLASSICAL TRANSLATIONS

EDITED BY H. F. FOX, M.A., Fellow and Tutor of Brasenose College, Oxford.

- Cicero.—De Natura Deorum.** F. BROOKS, M.A., late Scholar of Balliol College. Crown 8vo, 3s. 6d.
- Cicero.—De Oratore, I.** E. N. P. MOOR, M.A., late Assistant-Master at Clifton. Crown 8vo, 3s. 6d.
- Cicero.—Pro Milone, Pro Murena, Philippic II. in Catilinam.** H. D. BLAKISTON, Fellow and Tutor of Trinity College, Oxford. Crown 8vo, 5s.
- Horace.—Odes and Epodes.** A. D. GODLEY, M.A. Crown 8vo, 2s.
- Sophocles.—Electra and Ajax.** E. D. A. MORSHEAD, M.A., Assistant-Master at Winchester. Crown 8vo, 2s. 6d.
- Aeschylus.—Agamemnon, Choephoroe, Eumenides.** LEWIS CAMPBELL, M.A., LL.D., late Professor of Greek at St. Andrews. Crown 8vo, 5s.
- Lucian.—Six Dialogues (Nigrinus, Icaro-Menippus, Cock, Ship, Parasite, Lover of Falsehood).** S. T. IRWIN, M.A., Assistant-Master at Clifton. Crown 8vo, 3s. 6d.
- Tacitus.—Agricola and Germania.** R. B. TOWNSEND, M.A., late Scholar of Trinity College, Oxford. Crown 8vo, 2s. 6d.

## METHUEN'S COMMERCIAL SERIES

EDITED BY H. DE B. GIBBINS, Litt.D., M.A. Crown 8vo.

- British Commerce and Colonies from Elizabeth to Victoria.** By H. DE B. GIBBINS, Litt.D., M.A., Author of "The Industrial History of England," &c. Third Edition. 2s.
- Commercial Examination Papers.** By H. DE B. GIBBINS, Litt.D., M.A. 1s. 6d.
- The Economics of Commerce.** By H. DE B. GIBBINS, Litt.D., M.A. 1s. 6d.
- A Primer of Business.** By S. JACKSON, M.A. Second Edition. 1s. 6d.
- German Commercial Correspondence.** By S. E. BALLY. Crown 8vo, 2s. 6d.
- French Commercial Correspondence.** By S. E. BALLY. Second Edition. 2s.
- A French Commercial Reader.** By S. E. BALLY. 2s.
- Commercial Geography,** with special reference to the British Empire. By L. W. LYDE, M.A. Second Edition. 2s.
- Commercial Arithmetic.** By F. G. TAYLOR, M.A. Second Edition. 1s. 6d.
- Facile Writing and Office Correspondence.** By E. E. WHITEFIELD, M.A. 2s.
- Guide to Professions and Business.** By HENRY JONES. 1s. 6d.
- The Principles of Bookkeeping by Double Entry.** By J. E. B. M'ALLEN, M.A. 2s.

## TEXT-BOOKS OF TECHNOLOGY

- Carpentry and Joinery.** By F. C. WEBBER. With numerous Illustrations. Crown 8vo, 3s. 6d.
- "It has the marks of practical knowledge set forth by a practical teacher."—*Guardian*.
- Practical Mechanics.** By SIDNEY H. WELLS. Illustrated. Crown 8vo, 3s. 6d.
- Practical Physics.** By H. STROUD, D.Sc., M.A., Professor of Physics in the Durham College of Science, Newcastle-on-Tyne. Fully Illustrated. Crown 8vo, 3s. 6d.
- Practical Chemistry.** By W. FRENCH, M.A. Part I. With numerous Diagrams. Crown 8vo, 1s. 6d. [Shortly.]
- Practical Millinery.** By Miss HILL. With numerous Diagrams. Crown 8vo, 2s. 6d. [Shortly.]
- Educational Reform. The Task of the Board of Education.** By FABIAN WARE. Crown 8vo, 2s. 6d.
- The Story of English Literature.** By EMMA S. MELLOWS. Crown 8vo, 3s. 6d.
- The history of English literature told in a simple style for young students. It is particularly rich in biographical detail and contains a considerable number of illustrative extracts.
- General Elementary Science.** By J. T. DUNN, D.Sc., and V. A. MUNDELLA. With many Illustrations. Crown 8vo, 3s. 6d. [Methuen's Science Primers.]
- A Constitutional and Political History of Rome.** By T. M. TAYLOR, M.A., Fellow of Gonville and Caius College, Cambridge. Senior Chancellor's Medalist for Classics, Porson University Scholar, &c., &c. Crown 8vo, 7s. 6d.
- An account of the origin and growth of the Roman institutions, and a discussion of the various political movements in Rome from the earliest times to the death of Augustus.
- Lacemaking in the Midlands.** By C. C. CHANNER and M. E. ROBERTS. With 16 Full-page Illustrations. Crown 8vo, 2s. 6d. [Shortly.]
- The Scientific Study of Scenery.** By J. E. MARR, Fellow of St. John's College, Cambridge. Illustrated. Crown 8vo, 6s.
- An elementary treatise on geomorphology—the study of the earth's outward forms. It is for the use of students of physical geography and geology, and will also be highly interesting to the general reader.
- A Class Book of Dictation Passages for the Use of Middle and Higher Forms.** By the Rev. W. WILLIAMSON. Second Edition. Crown 8vo, 1s. 6d.
- The passages are selected from recognized authors, and a few newspaper passages are included. The lists of appended words are drawn up mainly on the principle of comparison and contrast, and will form a *répertoire* of over 2,000 words, embracing practically all the difficulties felt by the pupil.
- The Construction of Large Induction Coils.** By A. T. HARE. With numerous Diagrams. Demy 8vo, 5s. [Shortly.]
- The Metric System.** By LÉON DELBOS. Crown 8vo, 2s.
- A theoretical and practical guide for use in elementary schools and by the general reader. [Shortly.]
- A History of Egypt, from the Earliest Times to the Present Day.** Edited by W. M. FLINDERS PETRIE, D.C.L., LL.D., Professor of Egyptology at University College. Fully Illustrated. In Six Volumes. Crown 8vo, 6s. each.
- Vol. VI. **Egypt under the Saracens.** By STANLEY LANE POOLE. [Shortly.]
- A Short History of Rome.** By J. WELLS, M.A., Fellow and Tutor of Wadham College, Oxford. With 3 Maps. Second Edition. Crown 8vo, 3s. 6d.
- "An original work, written on an original plan and with uncommon freshness and vigour."—*Speaker*.
- Passages for Unseen Translation.** By E. C. MARCHANT, M.A., Fellow of Peterhouse, Cambridge, and A. M. COOK, M.A., late Scholar of Wadham College, Oxford; Assistant-Masters at St. Paul's School. Crown 8vo, 3s. 6d.
- "A capital selection, and of more variety and value than such books usually are."—*Athenæum*.
- Exercises in Latin Accidence.** By S. E. WINBOLT, Assistant-Master in Christ's Hospital. Crown 8vo, 1s. 6d.
- "Accurate and well arranged."—*Athenæum*.
- Notes on Greek and Latin Syntax.** By C. BUCKLAND GREEN, M.A., Assistant-Master at the Edinburgh Academy, late Fellow of St. John's College, Oxon. Crown 8vo, 3s. 6d.
- "Well arranged, clear, and extremely useful."—*School Guardian*.
- New Testament Greek. A Course for Beginners.** By G. RODWELL, B.A. With a Preface by WALTER LOCK, D.D., Warden of Keble College. Crown 8vo, 3s. 6d.
- A Greek Anthology.** Selected by E. C. MARCHANT, M.A., Fellow of Peterhouse, Cambridge, and Assistant-Master at St. Paul's School. Crown 8vo, 3s. 6d.

# DENT'S MODERN LANGUAGE SERIES.

Edited by WALTER RIPPMMANN, M.A.

Just published, extra fcap. 8vo, 3s. 6d. net.

\* **OUTLINES OF HISTORICAL FRENCH GRAMMAR.** By A. T. BAKER, M.A., Ph.D.

The object of this short work is to give, in as brief a space as possible, all that is necessary for those who wish to gain only an elementary knowledge of the philological side of the language, and to form at the same time a trustworthy guide for those who intend studying the subject much more deeply.

Extra fcap. 8vo, 1s. 6d. net.

\*\* **DENT'S FIRST FRENCH BOOK.** Based on the Hülzel Pictures of the Four Seasons. By S. ALGE and WALTER RIPPMMANN.

Extra fcap. 8vo, 1s. 6d. net.

**HINTS ON TEACHING FRENCH.** With a Running Commentary to Dent's First and Second French Books. By WALTER RIPPMMANN.

Prof. FREDERIC SPENCER writes:—"Dent's First French Book appears most opportunely, supplying as it does, on the lines of the 'reform' method, a course which is both rational and eminently practical."

Extra fcap. 8vo, 1s. 6d. net.

\*\* **DENT'S SECOND FRENCH BOOK.** By S. ALGE and WALTER RIPPMMANN. Consists mainly of a charming story by JEANNE MAIBET, "La Tâche du Petit Pierre."

The Second French Book can be taken with a class, even without previously working through the First Book. It will be found an excellent reading book.

"We can heartily commend this reader as an exposition of the new method."  
—*Journal of Education*, Dec., 1898.

Extra fcap. 8vo, 2s. 6d. net.

\* **FRENCH DAILY LIFE.** Adapted by WALTER RIPPMMANN from Dr. KRON'S "Le Petit Parisien."

"For class use it is far better than anything we have previously seen. It is not, of course, intended for beginners. The Englishman travelling in France will find here all the phrases essential to his comfort—not in formal lists, but strung together in a chatty and interesting narrative, which also contains information as to how and where the phrases are to be used."—*Education*.

\*\* SPECIMEN COPIES OF THESE MAY BE HAD BY TEACHERS ON APPLICATION.  
\* SPECIMEN COPIES OF THESE MAY ALSO BE HAD AT HALF-PRICE BY TEACHERS.

J. M. DENT & CO., 29 AND 30 BEDFORD STREET, W.C.

BOOL, B.A., Lecturer in Elementary Mathematics, East London Technical College. Crown 8vo, 2s. 6d.; with Answers, 3s.

WHITTAKER & CO., White Hart Street, Paternoster Square, London.

# APPROVED SCHOOL BOOKS BY DR. CORNWELL, F.R.G.S.

"We are qualified by ample trial of the books in our own classes to speak to their great efficiency and value. We have never known so much interest evinced or so much progress made as since we have employed these as our school-books."—EDUCATIONAL TIMES.

**A School Geography.** 88th Edition; 3s. 6d., or, with 30 Maps, 5s. 6d.

"Very superior to the common run of such books. It contains a good deal of useful matter of a more practical kind than usual, which the exercises are likely to impress on the mind more deeply than by the parrot system."—*Athenæum*.

**A School Atlas.** Consisting of Thirty Small Maps. A Companion Atlas to the Author's "School Geography." 2s. 6d., or 4s. coloured.

**Geography for Beginners.** 68th Edition; 1s., or, with 48 pp. of Questions, 1s. 4d. Questions, 6d.

"A very useful series of Educational Works, of which Dr. Cornwell is either author or editor. It ('The Geography for Beginners') is an admirable introduction. There is a vast difficulty in writing a good elementary book, and Dr. Cornwell has shown himself possessed of that rare combination of faculties which is required for the task."—*John Bull*.

**Spelling for Beginners.** A Method of Teaching Reading and Spelling at the same time. 4th Edition, 1s.

**Allen and Cornwell's School Grammar.** 64th Edition; 2s. red leather, or 1s. 9d. cloth.

"The excellence of the Grammar published by the late Dr. Allen and Dr. Cornwell makes us almost despair of witnessing any decided improvement in this department."—*Athenæum*.

**Arithmetic for Beginners.** Combines simplicity and fullness in teaching the First Four Rules and Elementary Fractions. 9th Edition. 1s.

**Grammar for Beginners.** An Introduction to Allen and Cornwell's "School Grammar." 87th Edition; 1s. cloth, 9d. sewed.

"This simple introduction is as good a book as can be used."—*Spectator*.

The Book is enlarged by a Section on Word-Building, with Exercises for Young Children.

**The Young Composer: Progressive Exercises in English Composition.** 48th Edition, 1s. 6d. Key, 3s.

"The plan of the work is very superior. We are persuaded this little book will be found valuable to the intelligent instructor."—*Westminster Review*.

**Poetry for Beginners: A Selection of Short and Easy Poems for Reading and Recitation.** 13th Edition, 1s.

**The Science of Arithmetic.** A Systematic Course of Numerical Reasoning and Computations; with very numerous Exercises. By JAMES CORNWELL, Ph.D., and Sir JOSHUA G. FITCH, LL.D. 26th Edition. 4s. 6d.

"The best work on arithmetic which has yet appeared. It is both scientific and practical in the best and fullest sense."—*London Quarterly*.

**Key to Science of Arithmetic.** With the Method of Solution to every Question. KEY, 4s. 6d.

"Eminently practical, well stored with examples of wider range and more varied character than are usually given in such books, and, its method of treatment being thoroughly inductive, it is pre-eminently the book for general use."—*English Journal of Education*.

London: Simpkin, Marshall, Hamilton, Kent, & Co., Limited.—Edinburgh: Oliver & Boyd.

## Cambridge Local and Colloge of Preceptors Examinations, 1900.

The following Books, published by RELFE BROTHERS, Ltd., will be found specially adapted for the above Examinations.

### FRENCH.

**Mérimée's Colomba.** With Notes and Vocabulary by the Rev. J. HEWETSON, M.A. Cloth, 2s.

**Ransome's Modern French Grammar.** Crown 8vo, cloth, 1s.

**Illustrated French Grammar.** By LOLY and GOUJON. Second Edition. Cloth, 1s. 6d.

### RELIGIOUS KNOWLEDGE.

**Acts of the Apostles.** With Introduction and Notes by G. CARTER, M.A. 1s. 6d.

**St. Luke.** With Introduction, Notes, and Comments on the Authorized and Revised Versions, by G. CARTER, M.A. 1s. 6d.

"The method adopted by Mr. Carter is at once clear and useful... The text of the Gospel is divided into paragraphs, with headings in bold type; the notes explanatory of passages requiring comment complete a most useful manual."—*School Guardian*.

ALSO PUBLISHED BY HENRY FROWDE.

Bourgeois, 32mo, cloth, pp. 508, price 1s. 6d. net. And in various Leather Bindings, from 3s. 6d.

# THE LEARNERS' PRAYER BOOK.

*Being the Book of Common Prayer. With Simple Notes.*

These notes on the Prayer Book have been written for the use of those who have not been well instructed in the meaning of the Book of Common Prayer. The Clergy, it is hoped, will find "The Learners' Prayer Book" useful for their Confirmation Candidates, for the young men and women of their various Classes, for all the children of the Church who have been brought up in Board schools, and for boys and girls starting out in life. On one margin the meaning of all obscure words is given, on the other are Scripture references, and at the foot of each page are simple notes explaining the subject and arrangement of the different Services. With this book in his hand, the least instructed person should be able to join intelligently in the worship of the Church.

*Educational Times.*—"This handy little volume combines in an admirable manner the purposes of a Prayer Book and a book of Instruction. It does not include a history of the Book of Common Prayer, but is explanatory and exegetical in a simple sense. There are marginal references and definitions of terms, and the notes constitute a helpful commentary throughout."

LONDON: HENRY FROWDE, OXFORD UNIVERSITY PRESS WAREHOUSE, AMEN CORNER, E.C.

## The Educational Times.

### Technical Universities.

THOUGH the conferences of January, at the Imperial Institute and elsewhere, have had a certain measure of attraction for people engaged in the work of education, they can scarcely be said to have shown the same actuality and urgency which distinguished our conferences of two or three years ago. The manifest reason is that what we were propounding and asking for in 1897 and 1898 is now our own, to do what we can with, and for the moment we are not in a phase of actual contention and demand. Rather, let us say, we are the busy bees of the Oxford, Cambridge, and London Conferences who have settled on their honey and are dumb. Our garden of education is full of the honey of organization, which needs to be absorbed, and secreted in the cells.

Sir George Kekewich and Sir William Abney, who were entertained a short time ago by the Association of Technical Institutions at Mercers' Hall, gave evidence that they also are engaged in transferring the honey to the cell. Prof. Wertheimer had proposed the toast of the new Board of Education, and Sir George rose with diffidence to respond for something which had no existence, and with which he had no connexion.

He was no longer Secretary of the Education Department or of the Science and Art Department, and he did not know what was to become of him. All he could say was that, if he should happen to occupy a position on the new Board of Education, he should continue to take the same interest—he hoped officially—in technical institutions that he had taken up to the present more or less as a private individual.

With regard to the policy of the future, Sir George added:—

It might be that in technical instruction we were still behind Continental nations, and especially in the establishment of great technical colleges, which he was desirous of seeing established. But he had great confidence in the English character—in its tenacity and energy; and he was convinced that before long they would be supplied with a system of technical instruction which would be second to none in the world.

Sir William Abney said that, for his part, "if he were entrusted with any duties under the new Board," he should endeavour to do his duty, and to gain the approbation of his colleagues and the public. This is all as it should be. Of course the new Board, in the domain above the elementary, will be very largely concerned with technical instruction, and those who are to be amongst its leading officials do well to assure the Technicals that their interests will not be neglected.

As for the literary schools, they will have their battle to fight. No one will want to neglect them, but some may

neglect them out of sheer ignorance, or distraction, or shortness of vision. Without forgetting that, we are unfeignedly glad to note the zeal of the Technicals for their own secondary and higher education. There is, indeed, no limit to their zeal. Mr. Chamberlain told us at Birmingham of the direction in which their zeal is leading them. Birmingham seems likely to be the Technical University *par excellence*. She has her Faculties of Arts and Science already, by virtue of the absorption of Mason College. She is to have her school of beer, because people interested in beer found the money for it. Apparently there is no good reason against any faculty whatsoever, if the money is forthcoming. For what does Mr. Chamberlain say?—

We ought to have a school of railway engineering, of electrical lighting, of railway management; every large trade in the town ought to be represented in the new University by specialized instruction—especially towards the termination of the University course—by such specialized instruction as will enable the students to leave college fully equipped to take a proper part in the work for which they are destined. . . . We are, I think, on the eve of discoveries which may be more important for the human race than any that have been made in centuries past; and I hope that we are going to take our full share in the research and the study which may lead up to these discoveries.

This, again, is excellent in its way. After all, a University is a place for universal knowledge and faculty, for endowed research and untiring invention. The country will have no reason to complain if Birmingham pushes the technical idea to its utmost development. London, too, is likely to make a great advance in the same direction, though she has other and more Imperial functions to discharge. The endowment of the London University is beginning in good earnest, for, what with State grants, County Council promises, and Lord Iveagh's munificent offer, she is already in a fair way towards equipment. Mr. Busk, on retiring from his position as Chairman of Convocation, mentioned a fact of very considerable interest. London University, he said, bids fair to become a universally recognized sphere for post-graduate learning and research. From information which has come before the Statutory Commission, it is anticipated that as many as a thousand students may be expected to attend the University from our Colonies and the United States of America, for purposes of research. At the present time, as Mr. Busk said, many go to one or another of the German Universities, and, without in any way reflecting on the German system, we should all prefer to see the students in question imbued with British rather than with German ideas. This, amongst other things, is what is understood by the Imperial function of London University.

*The late  
C. P. Mason.*

CHARLES PETER MASON, B.A., F.C.P., Fellow of University College, London, has passed away full of years and of honour. His death will awaken many kindly recollections in the minds of nearly all who read these words. Not only was he prominent in his day amongst the pioneers of secondary education, forty or fifty years ago, and an active member of the College of Preceptors in various capacities, but he was also an educational writer of high repute.

Born at Highgate, in 1820, Mason was educated at Finchley, at University College School, and at University College. There was exhibited at the Imperial Institute, last month, the earliest register of London University, in which Mason's name appeared in the Matriculation list of 1838, when he was bracketed first in Classics. Two years later, on taking his degree, he stood second to his friend and schoolfellow the late Prof. Greenwood. He then studied at Bonn for two years, and, on his return to England, was for some time Professor of Classics at the Lancashire Independent College. In 1850 he entered into partnership with Mr. Fletcher, at Denmark Hill, and became sole principal of the school in 1852. For twenty years he conducted this school with great ability and success. Many of his pupils, who have distinguished themselves in after life, will be ready to bear witness to the excellence of his teaching; and we may mention that the late Lord Herschell was amongst the number.

In 1870 Mason withdrew from active work as a schoolmaster, and devoted his leisure to literary pursuits and the revision of his "English Grammar" and other works. The "Grammar" had been a wonderful success. It was the soundest and clearest text-book of English which had been produced up to his time, Morell's being the only one which could stand comparison with it. It has seen thirty-five editions, numbering 150,000 copies; and, as Mason had retained the copyright, and dealt with an honourable firm of publishers, he derived from it a very satisfactory income. It had a large sale in the Colonies, especially in Canada, and it is not yet by any means superseded.

Mason was Vice-President of the Council of the College of Preceptors from 1872 to 1878, and he held his position on the Council from 1860 down to the year 1895. For many years he acted as one of the Examiners in English Language and Literature. His interest in educational matters was always keen, and his prominence as a private schoolmaster was recognized by the Schools Inquiry Commission, before which he gave valuable and interesting evidence in 1865. At an earlier period he had acted, with Mr. E. E. Pinches and others, on the original London Committee for acclimatizing the Oxford Local Examinations. He was an occasional contributor to the *Educational Times*, and we may mention that in 1881 he wrote a kindly and appreciative memoir of his old friend Dr. Pinches, who, like himself, had been distinguished in the first rank of English private schoolmasters.

In 1843 he married Miss Eleanor Edwards, daughter of the Rev. J. Edwards, of Stratford-on-Avon, who survives him. Mrs. Mason was his invaluable helpmeet at Denmark Hill, and she was at the same time a lady of many accomplishments. She excelled as a pianist and as a painter, and it may fairly be said of her that she was at all times the congenial companion of her husband's most laborious and most leisurely moments.

## NOTES.

MANY worshippers of varied ideals feel that they have lost a leader by the death of Ruskin. Educational reformers will not be the slowest to feel it. Although his direct suggestions in this field were comparatively few, general, and, needless to say, scattered here and there through his works, they are always lucid and striking. Education, more than any other profession, benefits from the criticism of an outsider, who can judge of the finished product better than the man at work. The fact that Ruskin never did any teaching of children in no way detracts from the value of his words. The supreme importance of obedience was the keynote of his preaching, with a fierce onslaught against the craze for liberty. Thoroughness in a few things he demanded, rather than a flashy show in many subjects. Yet he strongly inveighed against teaching children merely to read and write, without giving them the taste to read and write good things. All we get, said he, as a result of our boasted Board school education is indecent scribbling on the pavement. There is that germ of biting truth in all his extravagances which impresses them so vividly. Instance, again, his ideal for free education: Let them be taught habits of industry, cleanliness, and honesty. So little? you say. Have you, at least, attained these? His views on the essential difference between a boy's education and a girl's are well worth studying: the main idea being that a boy's should be intensive and progressive, a girl's extensive and conservative.

THE vacancy in the Parliamentary representation of London University has led to the usual academic discussion as to the ideal representation of a University constituency. In addition to the claims of social and political doctrinaires, we now find those of educationists and educational organizers put forward. The view expressed in some papers—the *Times*, for example—that the separate representation of Universities can only be justified on the assumption that men of the highest literary or scientific distinction are chosen, is too narrow. There are periods when the presence in the House of Commons of an independent educational reformer, fully conversant with the composition of our educational problems, would be invaluable. He would, especially if of such University and intellectual distinction as would command the confidence of the public-school authorities, render more service to the country than a man whose brilliant scholarship was his chief recommendation. There is no good reason why the present University electorate should not be extended. Why the qualification of a voter at Oxford and Cambridge should be in effect a mere money payment it is hard to say, and our next Reform Bill will doubtless herald a change in one way or another. Perhaps our younger Universities will then advance their claims.

ONE might almost think that the training colleges must have a difficulty in finding enough for their students to do, if such illustrations for lessons as were exhibited at South Kensington are indeed encouraged by the authorities. Such marvellous ingenuity in wasting time it has seldom been our lot to come across. Some dozen dolls were shown, dressed by a painstaking student, to represent the costumes of the different

centuries; the same inane doll's expression simpered in the pre-Saxon skin attire, the Puritan's cloak, and the Cavalier's lace and feathers. Rough drawings would be far more suitable; unless, indeed, it is intended to show the sameness of human nature under varying conditions. For a lesson on measuring heights and distances in trigonometry a very elegant model of a church in cardboard was erected: if the girls (there is no disguising the sex in such cases) cannot grasp the idea without this aid, they certainly are not fit to attack the problem at all. A tantalizing item in the catalogue was "device for teaching the Latin declensions." This turned out to be a box full of different-coloured tickets with a Latin noun written on each. There was no key to the mystery; but we suppose the colours had some connexion with the declensions. It is difficult to believe that an institution professing to teach the laws of memory should permit the use (not to say the unblushing exhibition) of such an unintelligent mnemonic.

---

TEACHERS of geography have always a delightful field of labour in preparing maps and pictures, but the teachers of history have evidently been put to it to excogitate original illustrations. The old-fashioned style of studying the subject by careful reading and attention to narration is played out, as being too dull; our modern pupils must taste, handle, see. The well known historical charts, divided into squares, each representing a year of a century, have been improved upon (?) by a model—a large shallow box, suggestive of geological specimens, is found to contain tin soldiers, an inch-long doll in a bassinette, a ribbon bow, a cardboard obelisk, and so on, dotted about in various squares: this is mercifully provided with a key, informing the pupil that this year was celebrated for somebody's birth, that for a war; no event seeming too trivial or too important to have a square devoted to it. A still more ambitious teacher of history (or is it only some one who is about to teach?) has devised a plan of an ideal class-room for the subject—one wall is covered by blackboards, each standing for a century, decorated with portraits, pictures, and names. The teacher, so says the explanatory note, may thus literally take his pupils through time. Does this mean by marching them round the room? On the other wall they will find corresponding blackboards, but each one represents in this case a million years, a geological period. So now geology and history can be picked up *ambulando*, so to speak. Very little harm, however, is done by these students in training; the first week of the storm and stress of real school life causes them to shed these ornaments. The only pity is that they come to their work with such false and disproportionate views as to the real purpose of illustrations, and are apt, by reaction, to consider the other parts of their training course as equally unpractical. In short, they backslide after conversion, and their last state is worse than their first.

---

A SADDER spectacle is afforded by some of the Board school exhibits. There is an enormous quantity of brushwork on view. This chiefly consists of highly coloured geometrical patterns, painted on paper laid out in squares. One onlooker was protesting in a loud voice that he would never believe young children could perform such feats. As it happens, nothing

could be easier or more mechanical and unintellectual. Another onlooker was puzzled to know what it was intended to teach, and paused for a reply. If art is supposed to be furthered by this terrible square-filling process, it is high time that artists should protest against our children's time being spent in work directly inimical to any feeling for art. If merely intended to make the children neat and accurate, it is an expensive method of attaining such an end. Much of the sewing exhibited was beautifully done—exquisitely fine hemming, feather-stitching, button-holes, and so on. For a technical school of needlework this would be most appropriate; but, for the average needs of the poorer classes in the matter of sewing, the girls might almost as well be studying Greek, for all the use it will be to them. This protest was made some years ago by a lady in an educational paper, but apparently had little effect; and, as we looked at these exhibits, we could not help reflecting on the case of a young servant who "finished" her Board school career last autumn without the faintest idea how to mend a hole in her stocking. Long ago Matthew Arnold said we lacked lucidity; to-day, perhaps, he would say we lack common sense.

---

WHY has botany been such an unpopular subject in schools? Prof. Miall, in his speech before the conference of science teachers at the Imperial Institute, suggested that the method of teaching was at fault. Instead of its being taught as a practical and experimental science, without the use of technical terms, the learner was at once engulfed in a quagmire of book-learning, reeking with a formidable terminology. Which is undoubtedly true. Possibly the explanation lies not so much in a faulty method as in the absence of teachers who really know the subject. Hence the reliance on books and the unpopularity of the subject. Ignorant teachers will endure as long as the subject is thrown into a group, or allowed to count as a "special" for a "poll" degree. Botany has too long been treated as a Cinderella subject, both by headmasters and by University Boards of Studies. It is no wonder that the Cambridge man forgot the name of the special subject he took up for his "poll" degree, and could only describe it as being "the thing you get up by walking about the gardens with a book in your hand." It is the duty of headmasters to employ competent teachers, and, if they cannot get them, to find out the reason why they cannot be produced by the Universities.

---

"A. B." writes:—"There is a passage in your leading article in January which is, perhaps, open to misconstruction. You say that girls from the Board schools ought to be, and will be, able to climb from scholarship to scholarship until they end on a level with men at the Universities. Doubtless you implied that Oxford and Cambridge still refuse them a degree on the ground of their sex; but I would point out that girls are now enabled to climb from the elementary schools to the Universities, and that some have already done so." That is quite true, and all credit is due for that fact to the ladies whose zeal and energy have made such promotion possible. But it is necessary, in the interests of the girls themselves, to insist on the point which was in our mind when we wrote. Oxford and Cambridge refuse to our girls not only degrees, but also matriculation.

Women are allowed to attend lectures (not all lectures) and to pass examinations, but they cannot yet end on a level with the men.

A MOVEMENT has been started by certain governors of intermediate schools in Carmarthenshire to establish cadet corps in connexion with the secondary schools of the county, and it is sought to obtain the approval of the Education Department for the scheme. The Battle of Waterloo may have been won on Eton playing fields, but it is painfully manifest that the mental and physical training and discipline derived from our staple games are not prophetic of any recurrence of such a result. Our national games are indeed admirable as a training for the hand-to-hand *mêlée* of the bayonet age. Now, the poacher's attributes—cunning and keen practised eyesight—are as essential as the fiery courage which our soldiers have never lacked. Take an average London boy on a country common and point out to him a rabbit crouching in a tuft of grass, only forty yards away, and he will not see it. He has never learnt to mark the movements of living objects in relation to their natural surroundings. Similarly, a first-class marksman may be equally incapable of detecting a creeping man four hundred yards away. Cadet corps can, perhaps, do no harm, even if approved and regulated by the Board of Education; but, if they are to be of any practical use in the development of serviceable military instincts, something is required in addition to the stereotyped military drill of existing cadet corps.

It seems probable that at length the buried treasure of our local records may be utilized. It is certainly time that something should be done in this matter, and we welcome Mr. Balfour's Committee on Local Records, which has just printed some "Schedules of Questions" to clear the ground for effective action. What are these local records, and where may they be found? Parish registers, parchments of leases, manorial rolls, churchwardens' accounts—these are some of the documents which the historian of the future will find invaluable for his work whether in local or general history. As to the whereabouts of these old manuscripts, that is just one of the points of difficulty in getting to work. In the past they have been kept anywhere or nowhere. It has been nobody's business to preserve them in safety, or, indeed, at all, and the result is that many have been lost, whilst many will be useless, thanks to years of dust and damp. In the church vestry, in the squire's chest, in the parish clerk's domain, and in other out-of-the-way places the search will have to be made. When they are found proper shelters will have to be created for these really valuable records where the student can consult them, and where he may expect to find them in good preservation. It is suggested that, in some cases, the free library would be a suitable place for the keeping of such documents. The two points of chief importance are that the student should be able to get at the records easily, whatever the local centre chosen, and that he should have no difficulty in learning where to go for what he wants. As yet these things are not decided; but a good start has been made by the Committee, and its "Schedules of Questions" and practical suggestions augur well for the carrying out of a scheme for which we have waited long enough.

## SUMMARY.

### THE MONTH.

On January 5 the Prince of Wales opened the English Education Exhibition in the east wing of the Imperial Institute. The Prince was received by the Duke of Devonshire, the Bishop of London, Dr. Adler, and various representatives of educational bodies throughout the country. The Duke of Devonshire read an address which gave an account of the origin of the Exhibition out of the intended exhibition of educational objects at Paris. The Prince, in declaring the Exhibition open, said it would be difficult to bring together any collection more worthy of study by those who had the interests of this kingdom at heart. He believed this was the first time that any one had been bold enough to organize an exhibition in London on a large scale of educational work alone; but he hoped it would be found that education by itself could produce a most interesting exhibition. It had also a significance as a preparation for the Paris Exhibition of this year, and they hoped to be able to show foreign critics and observers that there was a unity as well as a wholesome variety in English education, and that we could worthily compete in friendly rivalry with foreign nations. He was happy to think that in declaring the Exhibition open he was assisting a cause which had always been supported by his family, and especially by his father.

A LARGE number of educational meetings and conferences were held during the month. In association with the Education Exhibition, several of the conferences took place at the Imperial Institute, in the large hall which will probably be used as a Senate House for London University. The first of the series, held on January 6, was organized by the College of Preceptors. We give elsewhere a full report of the proceedings of this conference.

On January 8, a conference of elementary and secondary teachers was held at the Institute under the direction of the Teachers' Guild, to consider the possibility of bringing about closer organization and better conjoint action between teachers generally. Canon Lyttelton, Headmaster of Haileybury, who presided, said that already a large number of organizations exist among teachers of various grades. What seemed now to be needed was unity between these separate organizations. Mr. J. H. Yoxall, M.P., would like to see the Teachers' Guild take the initiative, and gather into its folds teachers of all sorts of schools. Mr. J. Thornton said that in Scandinavia there was a quinquennial educational conference, supported by the Government, which tended to bridge over the social gulf between teachers of different grades, and to solve many problems still acute in England. Mr. Charles Bowden pointed to the Educational Institute of Scotland, which embraced all the teachers of the country, from the University to the kindergarten school.

On the second day of this conference the Rev. T. W. Sharpe, C.B., gave an address on "The Future Supply of Teachers and the Methods of Training them." He said that the training colleges should admit no teachers who had not been properly prepared to enter the institutions. They wanted to lift the training colleges up to the University standard, and to University recognition. They, as an influential body, should protest against the use of set books for the purposes of examinations. Where set books existed, no freedom of knowledge was to be found. With regard to examinations, he would be satisfied if there were none, but in that case he would require certificates of study in their place. As to the supply of students from the rural schools, he recommended that leaflets or pamphlets should be printed and circulated amongst the public stating some of the advantages that were to be derived by teachers. For the best pupil-teachers they would have in the future to look mainly to the London County Council and to the School Boards and central classes where there had been University Extension lectures. Some might even be taken from secondary schools, and in that case they should secure the co-operation of the heads of those schools to encourage their pupils to take up teaching. He hoped that the training colleges would not be captured for the purpose of agricultural teaching, which was now so much advocated. Country boys and girls wanted as good an education as those who lived in the towns.

THE eighth annual conference of the Association of Principals and Lecturers in Training Colleges under Government Inspection was held on January 11 at the Imperial Institute. The chair was taken by the President, the Rev. H. Wesley Dennis, Principal of St. John's College, Battersea. From the report it appeared that the Association has 225 members. In the morning Miss Annie Yelland lectured on "A Visit to Athens in the Age of Pericles," and Prof. Rippmann read a paper on "The Reform Method of Modern Language Teaching." The Bishop of London also addressed the conference. After comparing the function of the teacher to that of a mustard plaster, the Bishop said:

From his own knowledge of the English boy, he knew of no means of inducing him to learn except at the point of the bayonet, and he was, therefore, no great believer in educational methods. The English boy had a deeply rooted objection to knowledge, disliking it for its own sake, and the problem of the teacher was to cure that dislike. There was a great difference between boys and girls; though that view was not a popular one nowadays. The girl wanted to learn; the boy did not, and enveloped subject and teacher in the same contempt, whereas the girl's enthusiasm spread to her teacher. He sometimes thought men should teach girls and women the boys. But not only was knowledge unpopular with boys; education was unpopular with the parents. There was no general interest in teaching; the public considered itself absolved from any care in the matter so long as the educationalists, the experts, existed. The questions of what the child should be taught, and how it should be taught, did not interest the public, and that was deplorable, as we should not get on in educational matters until they did. Our public schools were institutions half-way between the barracks and the workhouse, to which parents sent boys for years, divesting themselves of all responsibility in the matter. The great question was how to get a fuller and wider recognition of the dignity of the teaching profession and the importance of its work.

THE annual general meeting of the Headmasters' Association was held at the Guildhall on January 10 and 11, under the presidency of Dr. Gow, of Nottingham. The Bishop of Coventry, by invitation, explained the scheme of local administrative areas put forward by the Birmingham Archidiaconal Association, which has already been described in these columns. Mr. R. D. Swallow moved the following resolutions, which were adopted after discussion:—

(1) That, for the purposes of secondary education, the area to be administered by the Local Authority should be not less than that of a county or county borough; and (2) that adjoining counties and county boroughs should have power to unite for such purposes; (3) that the Local Education Authority, hereafter to be established, should have the control of the local administration of primary, secondary, and technical education, but should not itself directly administer any school or institution providing the same; and (4) that such Local Education Authority should be invested by statute with definite powers over schools of all kinds, however administered, within its own area, such statutory powers to vary with the nature of the administration of the schools or institutions concerned.

The following resolution was subsequently carried, on the motion of the Rev. T. N. Hart-Smith:—"That, in the opinion of this Association, it is desirable that, without interfering with the existing powers of Local Authorities, the main inspection of secondary schools should be conducted by, or on behalf of, the Board of Education."

A RESOLUTION to the following effect was carried after considerable discussion, on the motion of Mr. J. J. Findlay:—"That this Association heartily sympathizes with the establishment of professorships, lectureships, and other University or collegiate agencies for the post-graduate training of secondary school teachers; and presses upon all those who are preparing for the profession the importance of systematic training in the theory and practice of education, with special reference to secondary schools. It is further of opinion that after five years from the commencement of the Board of Education Act no new member of the profession should be qualified for a place on the register of secondary teachers who had not undergone some such systematic course of training." Mr. Findlay said:

There were certain dangers which would be incurred if teachers merely emphasized what was really the theoretical side of the study of education, and neglected all the other factors in the problem of training. There were two dangers to be guarded against. The first danger was that of professors and lecturers neglecting the practical side of training, and failing adequately to realize the teachers' needs. Nothing had done more harm to the theory of education, or had brought it into more contempt, than the fact that philosophers and men who had no experience of the work teachers were doing, or of

their ideals, had written books which were regarded as standard works on the theory of education. Another danger was due to the circumstance of the training movement in England falling hitherto almost completely into the hands of primary teachers or women teachers. The study of education should rest on a more thorough basis of scholarship and culture.

A CONFERENCE of science teachers, under the direction of the Technical Education Board of the London County Council, was opened at the Imperial Institute on January 11. Sir John Lubbock presided in the morning, when a discussion took place on the study of botany. At the afternoon meeting the chairman was Sir Henry Roscoe, Vice-Chancellor of the University of London. The address was delivered by Prof. H. E. Armstrong, Ph.D., F.R.S., on "Juvenile Research," accompanied by demonstrations and experiments, the latter undertaken by three of his own children. He argued that the teaching of science should strictly proceed through observation and experiment. Simple illustrations in physics and hydrostatics were employed to show the possibility of interesting even the youngest children in the pursuit of science. Dr. Gladstone, F.R.S., also addressed the conference.

THE conference was resumed on January 12 at the Shoreditch Technical Institute, when Dr. Kimmins presided, in the unavoidable absence of Mrs. Bryant. Prof. Woods Hutchinson was also absent through indisposition. Mr. J. W. Tutt, Headmaster of the Portman Place Board School, Globe Road, Stepney, read a paper on the place of object-lessons in natural history in the curriculum of elementary schools. He dwelt on the value of living object-lessons, every form of life having its peculiar attraction for the young. Miss von Wyss, of the North London Collegiate School for Girls, emphasized the importance of systematic teaching and constant observation of even the commonest objects; Mr. Winch, a Board teacher, and Mr. Pilley, on the other hand, lamenting the inutility of purposeless observation. Mr. Swayne, one of the inspectors of the Science and Art Department, thought that headmistresses, who were usually "literary," had been hitherto unsympathetic towards science teaching. The general feeling of the conference was in favour of more time and more abundant opportunities being given for elementary instruction in natural history.

At the afternoon conference, the chair was taken by Major-General Sir J. F. Donnelly, K.C.B., late Secretary of the Science and Art Department, who referred to the advantages which an early acquaintance with wood work and metal work had offered to himself. The discussion, opened by Mr. C. T. Millis, of the Borough Polytechnic, was continued by Mr. A. W. Bevis, director of manual instruction under the Birmingham School Board, and by representative teachers from Liverpool, Portsmouth, and elsewhere. Prof. Ripper, of Sheffield, in reply to certain criticisms, said that manual instruction was alike an educational training and a training for trade purposes. It was, and must be, both. He deplored the waste of effort which was inevitable in the instruction of young people not destined to carry it further; but, as Mr. Mundella had long ago pointed out, unless we had technical schools we should lose as a country our pre-eminence in the manufacture of metal work, notably machine tools. Mr. C. A. Buckmaster brought the discussion to a conclusion.

THE annual meeting of the Private Schools' Association (Incorporated) was held on January 12, at the College of Preceptors. The Rev. J. B. Blomfield (Lewisham Collegiate School), President for the ensuing year, said that, with regard to the Secondary Education Act and the new Education Board, everything depended upon administration. If it was coercive, arbitrary, and centralizing, governed by ideals set up in other lands, it was bound to produce the minimum of good with the maximum of evil. If, on the other hand, the Act was administered in a generous and sympathetic spirit, if local needs were considered, if the right men were put on the Consultative Committee and Local Boards, if the idea of the necessity of beginning with a clean slate was abandoned, and if it was not taken that what was English was, therefore, wrong, much good might reasonably be hoped from it. Resolutions were passed to the effect that in the opinion of the meeting the Consultative Committee should be so constituted as to do justice to all interests involved in the organization of secondary education; that, while sympathizing with the

establishment of universal and collegiate agencies for the training of teachers for secondary schools, the meeting urged upon all preparing to enter the profession the importance of systematic training in the theory and practice of education; and that the teachers were in favour of opening private schools to inspection, as suggested by the Education Act, if they were assured that the inspectors appointed had experience both in the teaching and in the management of schools of a similar type.

The annual meeting of the Assistant-Masters' Association was held on January 13, at the City of London School. Mr. Fabian Ware explained the provisions of the Bill which the Association propose to promote in Parliament; and remarked that, when it came to be discussed in the House, the public would learn what an assistant-master in secondary schools was, and what were some of his worst grievances. He moved that the resolution passed at the Birmingham meeting, held on September 16, should be reaffirmed, namely:—

That Clause 22 of the Endowed Schools Act, 1869, and Clause 4 of the Board of Education Act, 1899, should be amended, so as to allow all headmasters and assistant-masters a right of appeal to the Board of Education, acting through the Consultative Committee, in case of dismissal; and that the Association should approach the Headmasters' Conference and the Incorporated Association of Headmasters, with a view to drawing up a concordat affecting the professional custom of giving assistant-masters three months' notice of dismissal, expiring at the end of the term.

Mr. A. G. Munro (City of London School) seconded the resolution, which was carried. On behalf of Mr. Kahn—who has been studying the question of commercial education on the Continent, but was prevented by illness from being present—Mr. de Sainte Croix (St. Edmund's School, Canterbury) proposed a resolution to the effect that commercial instruction in secondary schools must have as base and lateral support a course of liberal education, in which due prominence is given to modern linguistic and literary studies. Mr. Atkinson (Rossall), in seconding, dwelt on the importance of general mental development, instead of merely training the hand. After some discussion, the resolution was carried.

At a general meeting of Convocation of London University on January 15, after a resolution of regret at the death of Sir James Paget, Mr. Blake Odgers, Q.C., presented the report of the committee which dealt with the election by Convocation of members of the Senate under the new statutes. It stated that the representatives allotted to Convocation would have to be chosen in May. The representatives would consist of the Chancellor (elected for life), the Chairman of Convocation, and sixteen members, of whom eight would retire every two years. These eighteen would form a majority of the members of the Council for External Students, who would have to advise the Senate regarding the whole of the present work of the University. The Academic Council, elected mostly by teachers of the University, would perform a like function for internal students. There was no restriction on the choice of candidates. The report also dealt in detail with the accommodation to be provided at the Imperial Institute, and stated that the new constitution would probably be in the hands of the University before the next meeting of Convocation in May, and before that time it would probably have taken up its abode in its new home. The report was carried, as was also a resolution dealing with the accommodation in the Imperial Institute. The proceedings terminated with the election as Chairman of Sir Philip Magnus, and a vote of thanks to the late Chairman, Mr. Busk, now candidate for the representation of the University in Parliament, for his services during the past eight years.

The ninth annual general meeting of the Association of Directors and Organizing Secretaries for Technical and Secondary Education was held on January 17, at the Imperial Institute. Mr. Macan (Surrey), the retiring President, occupied the chair at the morning sitting, when Mr. W. Hewitt (Liverpool) was elected President for the year 1900. The following resolutions were agreed to:—

That the Sanitary Inspectors' Examination Board, having no representatives upon it of either Local Authorities or educational institutions, is unworthy of public confidence. That this Association is unable to understand the action of the Local Government Board in declining to place on the above mentioned Board representatives of the City and Guilds Institute, the Association of Technical Institutes, and this Association. That the interests alike of municipal government and of

educational efficiency and harmony demand that in the constitution of Local Authorities for Secondary Education these should be (a) identical with the Local Authorities for Technical Education, and (b) should consist of members of the Councils of counties and of county boroughs . . . freely co-opted as regards the administrative counties either by the Councils or by the municipal majority of the committee. That, in the interests of the effective local administration of education, it is essential that the statutory areas for the Local Authority responsible for secondary and technical education shall be none other than the ordinary municipal areas of the County Councils and County Borough Councils, but that free power should be given to Authorities in charge of these areas to combine for specific purposes.

On January 18 Mr. Chamberlain presided at the last meeting of the Governors of Mason College, which is to be merged in the new University of Birmingham. He said that the Charter of the University had been drafted, and he hoped that it would be granted within six weeks of the meeting of Parliament. Speaking of the future work of the University in technical instruction and scientific research, he said:

I hope, before long, that we shall do for every trade in the town what we are now doing for one or two. We have a school of brewing, we have a school of engineering; we ought to have a school of railway engineering, of electric lighting, of railway management; every large trade in the town ought to be represented in the new University by specialized instruction—especially towards the termination of the educational or University course—by such specialized instruction as will enable the students to leave the college fully equipped to take a proper part in the work for which they are destined. . . . We are, I think, on the eve of discoveries which may be more important for the human race than any that have been made in centuries past, and I hope that we are going to take our full share in the research and the study which may lead up to these discoveries.

Mr. Chamberlain added a strong plea for a further increase of endowment. The contributed fund now exceeds £325,000.

## UNIVERSITIES.

(From our Correspondents.)

THE term opens with a sad record of deaths among Oxford. Fellows of Colleges. The University has lost members as well known outside as Mr. Ruskin and Mr. G. W. Stevens, and as well known inside as Mr. R. L. Abbott and the Rev. H. Furneaux. Mr. Furneaux was a remarkable specialist. To Tacitus, his one subject, he steadily devoted himself all his life; and he had his reward. To have produced the edition of a classical author of the first rank is a distinction rare in Oxford; indeed, in England. Mr. Furneaux achieved it. Mr. Abbott is a very great loss as a teacher. He was Senior Tutor of the Non-collegiate Students, of whose situation and needs he had a deep and sympathetic knowledge, and whose welfare—at times a tender plant—he did much to foster.

The appointment most worthy of chronicling is that of the new Sanskrit Professor, Mr. Macdonell. He had done the Professor's work for some years, and is at once learned and inspiring; every one concerned is thoroughly pleased.

A great deal of building is being done in Oxford at the moment, and its progress during the vacation is quite the most noticeable time-index. Much of it is destined to serve the ends of natural science, which is steadily demanding and getting more and more space and material facilities. Round the original Museum the agglomeration of attached buildings goes on growing, like the seedlings round a tree. Architecturally the effect is ruinous. As to the Museum itself, critics disagree; it was, however, Ruskin's offspring, and is almost the only material monument to him in Oxford. Waiving its artistic claims, it undoubtedly possesses great historic interest, and in our "storehouse of styles" occupies a pigeon-hole by itself. The new accretions are in a style not merely different, but discordant; they are, too, so crowded on to it as to spoil at once its effect and their own.

Architecture's loss is, however, education's gain. When all is finished, we shall have all our science centralized (save for a few chemical laboratories) in one very commodious establishment. Of the additions, the new Radcliffe Library approaches completion; it has been built at a cost of £15,000, granted by the Drapers' Company. It will be as capacious as could be desired, and its closeness to the laboratories will be most advantageous. In a less forward stage of building are the new Pathology and Morphology Departments, built by an anonymous gift of £5,000, supplemented by a University grant. When these are up, our

scientific accommodation will contrast favourably with that at Cambridge.

More of it is, nevertheless, needed. Our geological arrangements, for instance, are quite inadequate; though the geological collection is assuming, under Prof. Sollas's care, a more presentable shape. For geology, we must build in the near future; Cambridge is doing so extensively now. Chemistry is another case. The department is far from flourishing at either University; but, while Cambridge has, at least, good public laboratories, we have not, and the need is crying. At least as needful, however, in both cases is some enterprise, some enthusiasm, some fostering care, *from the top*. The divorce of work and pay in the teaching staffs is felt among chemical students as a gross scandal with the very worst effects. At Oxford there is really no chemical research. At Cambridge the private laboratories of Caius and Sidney do a good deal; but they are in a state of tacit antagonism to the inefficiency of the public laboratory.

An interesting point which will come up this term is the mooted D.Sc. degree. Our Natural Science system at present is as follows:—Within a year of Responsions comes a general preliminary examination. After this one works at *one* subject for the B.A. with Honours, and may then (for the last four years) take up research and get a B.Sc. The D.Sc. would put the coping-stone to this system, which, with its frank specialization, deserves all praise. Cambridge, so superior to us in *personnel*, is here rather behind us. After a man has passed the First Part of his Tripos (on *three* subjects) he takes for Second Part not one subject, but two; and, though he is supposed to emphasize one of these, he has to know the other well enough to divide and so cripple his energies—a half-and-half course, which is specialization, and yet is not. There is at this moment on foot at Cambridge a very strong private agitation for the complete revision of this Second Part, which is interesting as illustrating the way in which the two Universities tend more and more to adopt common methods in pursuit of their common ends.

The Mathematical Scholarships for the year have just been announced. The Senior goes to W. M. Roberts, B.A. of Corpus; the Junior to W. J. Walker, scholar of Balliol; and the Junior Exhibition to H. C. Beaven, scholar of Balliol.

So far the term is young, but we have had plenty of excitement in giving our send-off to the contingent of the University Volunteers who have offered their services for the front. The scene was a most impressive one, and will live long in the memory of those who were present. The War Office authorities are recognizing fully what a vast reserve it possesses to draw upon in the Universities. Already five commissions in the Royal Artillery have been offered to the Vice-Chancellor, to confer upon candidates selected according to his absolute discretion.

The prevalence of influenza, which was so marked among the residents before the undergraduates returned, threatened a grave danger to University work, but, fortunately, so far the epidemic has not taken any hold of the colleges; and it is hoped the danger is now practically over.

The vacancy in the office of Esquire Bedell, caused by the lamented death of Mr. W. A. Gill, of Magdalene, has been filled by the appointment of Mr. A. H. Evans, of Clare, who defeated his chief opponent, Mr. Courter, of Pembroke, by a majority of four to one. Another election is now on the *tapis*. It is to a living the presentation to which has fallen in to the University owing to the patron being a Roman Catholic. "The election is *more burgensium*, as before," so runs the stereotyped notice of election; and it is hoped that in a very short time we shall have the new enactment which will enable these appointments to be made in a manner more in accordance with modern ideas and usages.

Mr. Dale having left Cambridge to take up his new post at Liverpool, the tutorship at Trinity Hall has been given to Mr. G. B. Shirres; and it is believed the appointment will be in all respects satisfactory for the college. At King's Dr. Montague James succeeds to the tutorship lately held by the Rev. A. H. Cooke, who has accepted the Headmastership of Aldenham School.

Before long, the controversy as to the proposed changes in the Mathematical Tripos will be in full swing. In spite of the great array of distinguished mathematicians whose names appear in favour of the changes, there are many moderate men who, having full knowledge of the action of examinations, though no special knowledge of the tripos in question, will not vote for alterations in any existing system until a clear case is made out. A good many years ago a somewhat similar measure was intro-

duced, with reference to the Classical Tripos; and during the debate in the Arts School only one voice was lifted up against the scheme. Being the result of a compromise, it was weakly supported by its own authors, and the result was that the Senate threw out the Grace by a decisive majority. It does not require much of a prophet to foretell a similar fate for the present proposals.

Important work continues to be done by the Tuberculosis Committee; and a definite proposal is now made that, if the colleges will contribute to the funds of the Association a sum of 1s. a head of the members in residence, the Committee will take charge of the inspection of herds and dairies, so as to prevent any chance of milk from tuberculous herds being supplied to the colleges. The experiment, if successful, will be of some value, as tending to show how the problem can be attacked without the assistance of a Government Department. In Denmark the State is enterprising enough to protect its staple industry, but in England the authorities are hard to move.

The new wing of the Engineering Laboratory, erected in memory of the late Dr. John Hopkinson by his widow and family, will be formally opened on February 2 by Lord Kelvin; and at the same time a portrait of Dr. Hopkinson will be unveiled. Prof. Ewing is to be congratulated on the continued success of his department, which is rising by leaps and bounds.

Our prospects on the river look fairly bright for the contest with Oxford. A crew is at present in practice; but the four or five Old Blues who are available to row are at present not called upon to take their places in the boat.

Twenty-four beds in Addenbrooke's Hospital have been placed at the disposal of the War Office for the use of our wounded soldiers; and our Medical School will doubtless profit by the experience which thus will be attainable.

### THE ENGLISH EDUCATION EXHIBITION.

THE Exhibition in the Imperial Institute might not inaptly be compared with London, viewed from the æsthetic point. At the first glance it disappointed; but, by search and research, the visitor discovered much that was worth knowing, studying, and even admiring. Its five sections embraced Elementary Education, Secondary Education of both sexes, Higher and University Education, Technical Education, Education of the Blind and Deaf. The sections which appealed most to the eye were certainly the first and the last two. They had objects to display—kindergarten cardboard, wood work in all its branches, clay modelling, sewing and fancy work, laundry work and cookery, beaten metal and iron work, all in great variety, and some of it excellent in style. One could hardly avoid the reflection that the annual Exhibition of the London School Board in the Hugh Myddelton Schools has been a very excellent training for the display of their exhibits. They certainly made a capital show.

The letterless method of teaching music to children appealed to the eye with its metal clefs, rings, disks, and black and white buttons for notes, its *brèves*, *orotchetts*, and *quavers*.

The half-dozen schools under the Girls' Public Day School Company which were represented exhibited kindergarten work, maps, brush work, badges, school mottoes, examination papers, freehand and model drawings, charts, photographs. One girls' school had a fair display of scientific apparatus with written work explaining the expansion of solids, density of water, radiation, and other experiments. Some specially interesting charts were sent by the North London Collegiate School for Girls, illustrating lessons in geography, the trade of the British Isles, British exports, Church events from A.D. 1000 to 1300, armour, the Peasants' Revolt, locomotion in the middle ages, dress, the flora of Australia, the cathedrals of England. The subjects lend themselves to a great variety of excellent work, and proved the talent and ingenuity that can be evoked for purposes of illustration.

Eton, Winchester, Shrewsbury, Rugby, Charterhouse, the Grey Coat Hospital had many ancient and interesting mementoes to show. There was a birch in a glass case, but, if truth must be told, it had a miserably unused and not perfectly genuine appearance; there was also a *bibling-rod*, whose purpose, even at a third glance, was not revealed to us. The Grey Coat Hospital sent its first account and minute books, both dated 1698. Eton reminded the world of its pre-eminence by its written volumes, its challenge shield won at Bisleby by the cadet corps, and a series of beautiful photographs of the college. There was a copy of the Charter of foundation of "Seinte Marie College of Wynchestre," dated 1382, at which all gazed reverentially. More attractive than piles of examination papers was a boy's letter describing the rebellion at Winchester in 1818, when the boys barricaded themselves in the tower, laughed at the masters, insulted Gabell, and shouted: "Williams for ever!"—whose rule, it appears, they wished to substitute for Gabell's. There were also copies of the "long school rolls," going back even to 1668.

These are the ancients; modernity steps in with Abbotsholme and Bedales, not to mention organized science schools, Anglo-French schools, and other developments. Many of the photographs were worth studying; but, when a teacher and class are under the eye of the operator, we would suggest to the former the advisability of assuming an attitude not quite so graceless and uncouth as that of a master whose school we shall not name. Even when the photographer is not there, attitude should count for something with the wise pedagogue.

It has often been remarked, and that before Teufelsdröckh's days, how important are clothes. In the educational world, and especially in the Universities, their value is as that of pearls and rubies. Recognizing this, Oxford has fully illustrated the subject. There is displayed a beautiful hierarchy of individuals in appropriate clothing, beginning with the Chancellor of the University, the nobleman in learning's garb, the D.D. in scarlet hood, the Bachelor of Law, Doctor of Music, that fine flower of University life the gentleman commoner, the yeoman bedel, the verger, the bellman, and the marshal—the last a mere man with a top hat.

Further on was an examination paper worked by Mr. Gladstone in 1831 in Moral Philosophy. In those days the written examination was only supplementary to the *viva voce*. The paper was preserved by the Rev. R. D. Hampden, afterwards Bishop of Hereford, and is doubly interesting in that a few months later Mr. Gladstone gained the distinction of a Double First. The writing is good and clear, but modern examination regulations are contravened in that the candidate has left a very small margin, has written the questions themselves, and has also written on both sides of the paper. It seems strange to reflect that he survived the paper sixty-seven years. As one wandered through interminable galleries one caught glimpses of portraits of T. H. Green, of Dr. Jowett, Darwin, Kelvin, and may other saints of the educational and scientific calendar. Ladies, too, were there, as Miss Clough, Miss Emily Davies, Miss Buss, Lady Stanley of Alderley.

The scientific exhibit of Cambridge University was considered very fine. Prof. Sims-Woodhead exhibited different media for the cultivation of bacteria; the rocking microtome for section cutting, which appeared in 1899, could at least, if not self-explanatory, cast abasement into minds ignorant of scientific apparatus. There was also on view a highly ingenious instrument called "the auxanometer," an instrument which actually measures the growth of plants "while you wait." But the exhibitor only exhibited an artificial plant, actuated by the same fear which induces wise parents to talk of the training of children in general, rather than attempt a drawing-room display of their own results.

Oxford showed a *correctoris flagellum e Collegio Lincolnensi*, a sacred relic of bygone days. She showed, too, a chart well worth attention. It marked the numbers of men receiving degrees from 1810 to 1898. In the former year 300 matriculated, of whom 140 took a degree, 92 going out in Honours. In 1898 the numbers are 800 matriculations, 650 degrees, 435 in Honours. Cambridge had a similar table. In 1800 110 men received degrees; in 1898 the number had risen to 756, of whom 412 passed in Honours, 333 ordinary passes, 11 advanced students.

The progress of the University Extension movement was also chronicled. The number of students is given as 3,500 at the various centres in 1873; in the session 1898-9 it had risen to 11,500. Many will be glad to know that the set-back of 1896-7 has been recovered, and the present is the largest number of students yet entered. Many of the time-tables displayed by schools and colleges could have been studied with advantage by inquiring teachers.

## CORRESPONDENCE.

### LONDON SOCIETY FOR THE EXTENSION OF UNIVERSITY TEACHING.

To the Editor of the Educational Times.

DEAR SIR,—In the next issue of the *Educational Times* will you please give your readers as full information as possible about the following courses of lectures by Prof. Earl Barnes on "The History of Education" and "Child Study," which have been arranged for the Lent Term, 1900:—(1) Toynbee Hall, Commercial Street, E., course of ten lectures on "The History of Education," on Mondays at 5.30, commencing January 22. (2) Bermondsey Settlement, Farncombe Street, S.E., course of ten lectures on "Child Study," on Tuesdays at 5.15, commencing January 23. (3) High School, Norland Square, W., course of ten lectures on "The History of Education," on Wednesdays at 5.30, commencing January 24. (4) Northern Polytechnic Institute, Holloway Road, N., course of ten lectures on "Child Study," on Thursdays at 5.30, commencing January 25.

Prof. Earl Barnes is so well known as a distinguished authority on these subjects, and as an exceptionally able lecturer, that I need not impress upon you the necessity of bringing the matter before teachers and others as fully as possible.

I enclose syllabuses, which will give you some idea of the attractive nature of the courses of lectures.—Yours very truly,  
January 2, 1900. C. W. KIMMINS.

## RECENT PUBLICATIONS.

Bound in Navy Blue Cloth, 1s. 6d.

Published under the auspices of the Navy League.

### BRITAIN ON AND BEYOND THE SEA.

By CECIL H. CROFTS, M.A.,  
Assistant-Master at Tonbridge School.

This work is an Explanatory Handbook to the Navy League Map of the World. It contains as frontispiece a reduced reproduction—size 21 by 15½ ins.—of the Wall Map, with all its special features.

The Letterpress contains a sketch of British Naval History, 1588-1882, based on the list of 112 naval events as printed on the Map. The position of each engagement is shown on the Map by a number, and in text the description of the event will be found under the same number, so that any naval engagement can be quickly localized, and its description easily found.

In the second chapter will be found an account of the British Empire, in which the position and the importance of our various Colonies are described. A brief Sketch of their history and of the method of administration is also given.

### THE NAVY LEAGUE MAP OF THE WORLD.

Illustrating British Naval History and Dedicated to the Children of the British Empire.

Size of Map, 79 by 63 ins.

Prices:—On Cloth, Stained Rollers, and Varnished, £1. 1s. On Cloth, Mahogany Rollers, and bound with Silk up the sides, £1. 11s. 6d. On Cloth, folded up in four divisions, and in titled box case, £1. 11s. 6d.

ENTIRELY NEW EDITION.

### THE HOWARD VINCENT MAP OF BRITISH EMPIRE. FOR SCHOOLS.

Size, 72 by 63 ins. With Handbook gratis. Adopted by the London School Board. 21s. on Cloth, Rollers, and Varnished.

The Twenty-Second Edition, thoroughly Revised to the present time.

### THE UNRIVALLED ATLAS.

Containing Forty Full-coloured Maps, Indexes, &c. Full-bound Cloth, 3s. 6d.

The Index to the Political Maps has been entirely re-set for this Edition.

### ARTISTIC COLOUR AND BRUSH WORK.

For Higher Standards. By W. SCHOFIELD.

Demonstration Sheets for Class Teaching.

Set A.—Fifteen Sheets. Designs for Panels, with numerous suggestive Examples in Free Brush Work. (A Year's Course.)

Set B.—Thirteen Sheets. Advanced Artistic Designs illustrating the Practical application of Brush Work. (A Year's Course.)

Accompanied by a Handbook. The Two Sets in Envelope, price 5s.

A SERIES OF

### SEWING AND KNITTING DIAGRAMS.

By E. HUGHES, West Bromwich.

One Sheet to each Standard. Standards I. to VII. Size of each Sheet, 34 by 28 ins.

Prices:—The Complete Series of Seven Sheets, on Cloth, Rollers, and Varnished, £1. 1s. Separate Sheets, on Cloth, Rollers, and Varnished, 3s. 6d. each.

An Explanatory Handbook is given gratis with each Set, also with one or more Sheets.

W. & A. K. JOHNSTON'S

### SERIES OF COOKING DIAGRAMS.

By HESTER DAVIES,

Superintendent, Training School of Cookery, Cardiff.

Six Sheets, in Colours. Size, 34 by 28 ins. Price 3s. 6d. each; or 18s. for the Complete Set on Cloth, Rollers, and Varnished.

Complete Catalogue of Wall Illustrations, Diagrams, Maps, Atlases, Terrestrial and Celestial Globes, post free to any address.

W. & A. K. JOHNSTON,

EDINA WORKS, EASTER ROAD, & 20 SOUTH ST. ANDREW STREET, EDINBURGH;  
5 WHITE HART STREET, WARWICK LANE, LONDON, E.C.

# Cassell's Unrivalled Dictionaries.

**CASSELL'S FRENCH DICTIONARY.** 555th Thousand. 1,150 pp. 3s. 6d.

"Has become a standard work in this country."—*Daily Chronicle*.

### Latin and Greek Classics.

- Caesar.—Gallic War, Book V.** By A. H. ALLCROFT, M.A., and W. F. MASOM, M.A. Text and Notes. 1s. 6d. Vocabulary. 1s.
- Caesar.—Gallic War, Book VI.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. Text and Notes. 1s. 6d. Vocabulary. 1s.
- Cicero.—De Senectute.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. Text and Notes. 1s. 6d. Vocabulary. 1s.
- Homer.—Odyssey, Books XI., XII.** By J. H. HAYDON, M.A. Lond. and Camb., and F. G. PLAISTOWE, M.A. Text and Notes. 2s. 6d.
- Horace.—Odes, Book III.** By A. H. ALLCROFT, M.A., and B. J. HAYES, M.A. Text and Notes. 1s. 6d. Vocabulary. 1s.
- Vergil.—Aeneid, Book VI.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Lond. Text and Notes. 1s. 6d. Vocabulary. 1s.
- Vergil.—Aeneid, Book IX.** By A. H. ALLCROFT, M.A., and W. F. MASOM, M.A. Text and Notes. 1s. 6d. Vocabulary, Books IX., X. 1s.

### English.

- ENGLISH GRAMMAR, THE PRECEPTORS'.** By W. H. LOW, M.A. Lond., and ARNOLD WALL, M.A. Lond., Professor of English in the University of New Zealand. [In the press.]
- The English Language: Its History and Structure.** By W. H. LOW, M.A. Lond. With 320 Test Questions. *Fifth Edition.* 3s. 6d.
- History of England, The Matriculation. (To 1702.)** With Maps, Battle-Plans, &c. By C. S. FEARENSIDE, M.A. Oxon. 3s. 6d.
- Shakespeare.—As You Like It.** Edited, with Introduction and Notes, by Prof. W. J. ROLFE, D.Litt. 2s.

### Latin and Greek.

- Greek Reader, The Tutorial.** By A. WAUGH YOUNG, M.A. Lond., Gold Medallist in Classics. *Second Edition.* 2s. 6d.
- LATIN COURSE, THE PRECEPTORS'.** By B. J. HAYES, M.A. Lond. and Camb. 2s. 6d. [In the press.]
- Latin Dictionary, The Tutorial.** By F. G. PLAISTOWE, M.A. Lond. and Camb., Gold Medallist in Classics. 6s. 6d.
- Latin Grammar, The Tutorial.** By B. J. HAYES, M.A., and W. F. MASOM, M.A. *Third Edition.* 3s. 6d. Exercises and Test Questions on. 1s. 6d.
- Latin Composition and Syntax.** With Exercises. By A. H. ALLCROFT, M.A., and J. H. HAYDON, M.A. *Fourth Edition.* 2s. 6d.
- Latin Reader, The Tutorial.** With Vocabulary. 2s. 6d.
- LATIN READER, THE PRECEPTORS'.** [In preparation.]

### Mathematics and Science.

- Chemical Analysis, Qualitative and Quantitative.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and R. W. STEWART, D.Sc. Lond. 3s. 6d.
- Chemistry, The Tutorial.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WILLIAM BRIGGS, M.A., F.C.S.  
Part I.: Non-Metals. 3s. 6d. Part II.: Metals. 3s. 6d.
- Chemistry, Synopsis of Non-Metallic.** With an Appendix on Calculations. By Wm. BRIGGS, M.A., F.C.S. Interleaved. 1s. 6d.
- Euclid.—Books I.—IV.** By RUPERT DEAKIN, M.A. Lond. and Oxon., Headmaster of Stourbridge Grammar School. 2s. 6d. Books I. and II. 1s.
- Hydrostatics, An Elementary Text-Book of.** By Wm. BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. *Second Edition.* 2s.
- Magnetism and Electricity, Text-Book of.** By R. W. STEWART D.Sc. *Fourth Edition.* 3s. 6d.
- MECHANICS, THE PRECEPTORS'.** By F. ROSENBERG, M.A., B.Sc. 2s. 6d.
- Mensuration of the Simpler Figures.** By Wm. BRIGGS, LL.B., B.A., F.C.S., and T. W. EDMONDSON, B.A. *Second Edition.* 2s. 6d.
- Sound, Light, and Heat, First Stage.** By JOHN DON, M.A., B.Sc. Lond. 2s.
- Trigonometry, The Tutorial.** By WILLIAM BRIGGS, M.A., LL.B., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. 3s. 6d.
- TRIGONOMETRY, THE PRECEPTORS'.** Edited by WILLIAM BRIGGS, M.A., LL.B., F.C.S., F.R.A.S. 2s. 6d.

### Book-keeping.

- Book-keeping, Practical Lessons in.** By THOMAS CHALICE JACKSON, B.A., LL.B. Lond. 3s. 6d.
- BOOK-KEEPING, THE PRECEPTORS'.** By the same Author. [In preparation.]

### French.

- FRENCH COURSE, THE PRECEPTORS'.** By E. WEEKLEY, M.A. Lond. 2s. 6d.
- FRENCH COURSE, BARLET'S PRECEPTORS' JUNIOR.** By STÉPHANE BARLET, B. ès Sc., Univ. Gall., Examiner in French to the College of Preceptors. 1s. 6d.
- French Prose Composition.** By E. WEEKLEY, M.A. Lond. 3s. 6d.
- FRENCH READER, THE PRECEPTORS'.** With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. Lond. *Second Edition.* 1s. 6d.
- French Prose Reader.** Edited by S. BARLET, B. ès Sc., and W. F. MASOM, M.A. With Notes and Vocabulary. *Third Edition.* 2s. 6d.

## FORECASTS AND COMMENTS.

February 1, 1900.

THE first course of Lectures to Teachers, in the Fixtures. twenty-sixth annual series, will be given at the College of Preceptors by Prof. Sully, on Thursday evenings at 7 p.m., beginning this day fortnight. Prof. Sully's subject will be "Intellectual Education."

\* \* \*

PROF. ERNEST A. GARDNER has begun at University College a course of eight Monday afternoon lectures on "Greek Sites," supplemented by a special class in preparation for the lectures to be given in Greece. The lectures during February will be on Athens, Eleusis, Epidaurus, and Megalopolis.

\* \* \*

It has been found necessary to postpone until next term the course of lectures which Mr. Stopford Brooke had undertaken to give at University College, London, on the poetry of Browning.

\* \* \*

PROF. BUTLER's course of lectures on Macchiavelli began yesterday at University College; and Dr. Moore's course on Dante, at the same college, will begin on Wednesday next.

\* \* \*

PROF. PRIEBSCH has undertaken to deliver three free public lectures in German at University College, London. The first of the three, "Shakespeare in Deutschland," was given last Monday. The second, "Leben und Dichten der Spielleute im Mittelalter," will be delivered on February 19; and the third, "Emanuel Geibel, der Sänger der Liebe und Herold des Reiches," on March 5.

\* \* \*

A COURSE of four popular lectures to young people, under the auspices of the Parents' Educational Union, will be given in the Horbury Rooms on Thursdays, February 1, 8, 15, and 22, by Mr. C. Carus-Wilson. The subject will be "The Wonders of Creation."

\* \* \*

MR. EARL BARNES has begun a course of ten lectures on the "History of Education," which are given at the Notting Hill High School on Wednesday evenings, at 5.30 p.m. The subdivision of the subject is as follows:—The Oriental Monarchies, Greece, Rome, the Early Church, the Middle Ages, the Renaissance and the Reformation, the Seventeenth and Eighteenth Centuries, the French Revolution, the Nineteenth Century, Problems of To-day. Tickets for each lecture are 1s. 6d., or for the whole course 10s. 6d. (teachers and students being admitted for 5s.), and may be obtained from Miss Lauder, 36 Campden Hill Gardens, W., and Mr. Perfit, 90 Holland Park Avenue, W.

Education Gossip. THERE were audiences of between a hundred and a hundred and fifty at the two sittings of the College of Preceptors' Conference on January 6.

Proximity to the Education Exhibition may have accounted for a few, but not for many, of those who were present, and no doubt the attendance would have been larger—both at the Conference and at the Exhibition—if they had been held in a more central locality.

\* \* \*

SOUTH KENSINGTON will become more and more the academic quarter of London, but for the present the new home of London

University strikes a casual visitor with a certain sense of chill. That will soon be remedied. Between now and May—when the Senate will be reconstituted—no doubt a great deal will be done to make the spacious rooms of the Institute fit to house the Imperial University.

\* \* \*

THE Scottish Education Exhibition has been held in the National Gallery, Edinburgh, where it was opened on December 30 with a brilliant ceremonial. The selections for Paris are now being made for the whole of the United Kingdom, and the exhibits will soon be ready for transmission across the Channel.

\* \* \*

THE successful candidates for diplomas at the January examination of the College of Preceptors numbered 67, out of a total entry of 263.

\* \* \*

THE President of the Association of Headmasters put in a reasonable plea for the occasional conferment of titular honours on eminent headmasters. The audience at the Guildhall laughed, not in derision, but because the idea tickled them. The *Daily News* quite commends the suggestion.

Perhaps the most respected and successful of our present headmasters is the layman who presides over St. Paul's School, and was previously Headmaster at Manchester. Few men since Dr. Arnold's day have exerted a wider and more beneficent influence over so large a succession of school generations. Why should such unquestionable public service not have its appropriate public reward? Mr. Walker might have been a bishop long ago if he had been in Orders. Lord Rosebery made Mr. Henry Irving a knight, and surely a great schoolmaster is as worthy of such an honour as a great actor.

Seriously, why not Sir Frederick Walker?

\* \* \*

THE Military College at Sandhurst has "gone to the front." In other words, the work of the college was so much interfered with by the departure of professors and commissioned students on active service that it has been closed until further notice.

\* \* \*

THE German Emperor has conferred on Dr. Buchheim, Professor of German at King's College, and a member of the Council of the College of Preceptors, the Order of the Red Eagle of the Third Class for his long service in promoting the study of German literature in this country.

\* \* \*

SIR JOHN GORST, Vice-President of the Committee of Council on Education, has appointed as his private secretary Mr. R. L. Morant, of the Special Inquiries Office.

\* \* \*

WHAT is wrong with the London Diocesan Board of Education? It complains that Churchmen do not adequately support it; that it is living on its reserve fund and owes money to its bankers. Not only so, but some large Church schools are in danger of passing under the London School Board. Who is to blame? Or is anybody to blame?

\* \* \*

EDUCATIONAL matters are still very little understood by the general public. One of our most respectable evening papers thinks that the fact of two conferences of headmasters sitting separately within a month "shows that we are only as yet in a preliminary state of educational unanimity." Perhaps, after all, our contemporary, judging *ab extra*, is approximately right. The "Conference" and the "Association" headmasters are quite distinct to us inside our ring; but outsiders may well wonder why they do not meet together.

\* \* \*

THE Birmingham Diocesan Association appears to have scored a little off both bodies of the endowed school headmasters; for both seem to have treated combinations of counties for secondary administration as a very reasonable thing. The Headmaster of Shrewsbury, the President of the Conference this year, wrote to the *Times* to say that the amendment in favour of grouping was only carried by 18 to 10; whereas the Conference includes over a hundred members.

WE are all at the mercy of the Post Office, and, as a rule, the Post Office treats us all remarkably well. We have not a word to say against it; but the fact remains that a packet of manuscript, intended for this number of the *Educational Times*, has gone astray at the last moment between the sender and the printer. "Things without remedy should be without excuse"; but we must take this means of accounting for the absence of the month's record of "Appointments and Vacancies," of our Welsh intelligence, and of sundry other items.

\* \* \*

Literary Gossip. PROF. E. E. MORRIS contributes to the January number of the *English Historical Review* a note on the story which tells how Wolfe, on the way down the St. Lawrence to Quebec, recited Gray's "Elegy," and said he would rather have written that poem than take the town from the French. We feared at first that Prof. Morris was going to destroy the whole story; but he only clears away a few inaccuracies, and leaves the substance intact.

\* \* \*

IN the same number Prof. Foster Watson has a paper on his favourite section of educational history: "The State and Education during the Commonwealth." The *Review* has many other articles of considerable interest, and is as indispensable as ever to the student of history.

\* \* \*

OF course the Welsh schools ought to make a point of Welsh history. This is far more evident than the wisdom of laying artificial stress on the Welsh language. The Cardiff Cymmrodorion Society has urged the University, Intermediate, and School Board authorities to make Welsh history a specified subject in the schools.

\* \* \*

IN the New York *Educational Review* there is a sensible article, "Is Spelling a Lost Art?" which states difficulties fairly enough, but does not air any new method of surmounting them. There is another paper in the same magazine on "The Prize System," suggested by Dr. Hill's memorable speech at University College School. This, too, we considered a sensible article, until we suddenly lighted on uncontested proof that the author had lost the art of spelling. He declares that something or other has happened "thru the abuse of a privilege." What if the art of spelling should be lost in the same way?

\* \* \*

THE deaths of the veterans, John Ruskin and James Martineau—though the latter was of age when Ruskin was at his preparatory school—has revived many an old memory half buried in the dust. The great seer of the Unitarians was at one time a disciple of Bentham and James Mill, and a fast friend of John Stuart Mill. He cast off their influence, so far as theory was concerned, and adopted a more humane and even emotional attitude. But Mill was his good friend to the last.

\* \* \*

MR. LESLIE STEPHEN may have something to say on this point in his forthcoming work on "The English Utilitarians," which will soon be ready for publication. It is an elaborate work in three volumes, and is being looked for with much interest.

\* \* \*

THE new editor of the *Guardian* is Mr. Walter Hobhouse, who was recently for a few years Headmaster of the Durham Cathedral School. The migration from school-teaching to editing is not unusual, and not very surprising. The two functions are similar in various ways. The journalist revels, as a rule, in unlimited freedom, variety, and elasticity; and, if he misses his supple cane and his lavish vacations, he has usually a better *solatium* on quarter-days.

\* \* \*

MESSRS. HENRY GRAVES & Co., the old established printsellers and picture dealers, make a new departure by publishing the first part of a series of "The Great Masters' Drawing Studies," selected by Principal Horobin, M.A. The subject is Landseer's Dogs. For copy-drawing from the flat these clear line engrav-

ings, with alternate leaves of good drawing paper, seem to be very well adapted.

\* \* \*

A LARGE-TYPE edition of Dr. Moore's Oxford text of the "Divina Commedia" will be published at once at the Clarendon Press. It will contain a few emendations and corrections and a revised index of proper names by Mr. Paget Toynbee. A volume of notes by the Rev. H. F. Tozer is in preparation, and should be in the hands of Dante students in little more than a year and a half from the present time.

\* \* \*

AMONGST other early products of the Clarendon Press will be the following works in English (and British) literature:—"Celtic Folklore: Welsh and Manx," by John Rhys, M.A.; "A Translation into Modern English of King Alfred's O.E. Version of Boethius," by W. J. Sedgefield, M.A.; "King Horn," edited by Joseph Hall, M.A.; "The Canon of Chaucer," by W. W. Skeat, Litt.D.; "Dryden's Critical Essays," edited by W. P. Ker, M.A.; "Plays and Poems of Robert Greene," edited by J. Churton Collins, M.A.; "The Works of Thomas Kyd," edited by F. S. Boas, M.A.; and "Milton's Poetical Works," edited by H. C. Beeching, M.A.

### THOUGHTS ON RETIRING.

BY A PEDAGOGUE RETIRED.

It is Black Monday—a day how variously regarded by those whom it most concerns!—by the harried parent, hailed with a sigh of relief; by the younger hopefuls, banned, amid cries of execration and horror that will all be hushed to-morrow, when once again the zest and pulsating stir of school life will have set hope and ambition a-throbbing in their hearts. Wholly joyful, perhaps, is this Feast of St. Orbilius to nobody, save to Miss Pinkerton alone, who, having spent five purgatorial weeks as a queen unthroned—*privata regina*—to-day is wafted majestic back to the academy at Chiswick. True, it is popularly supposed that her brethren of the craft, the august headmasters of Great Britain, likewise rejoice this day, and keep festival with pious orgies, decent mirth. But, as to the truth of that opinion, we confess to have entertained some doubts, as we have frequently had occasion to notice that on the morrow of Black Monday the temper of these Great Beings is seldom suggestive of that peace of mind and serenity of thought that would naturally be prompted by the days of "whitest mark" in the working year's calendar. So we prefer to mark down the headmaster as doubtful. And those inferior beings, the poor creatures that do his will—not, mark you, the keepers of hotels in our great schools, that are almost independent of Greatness, because they are men of means—but those humble servants or assistants who depend wholly for their advancement, perhaps for their subsistence, on the favour of the Great Beings—how are we to suppose that they regard Black Monday?

Just see how this pen of mine, so long unused to liberty, frisks and curvets over this ample champagne, indulging itself with a "free-hand" such as, I warrant you, it has not enjoyed these many years. Behold, good reader, it is the pen of a pedagogue retired—of one to whom Black Monday will henceforward be as other Mondays—nay, will be more delightful, more inspiring, more prolific of inward peace and content than all other days of the year, just because to-morrow there are no ruffled tempers to be coped with, no Virgil to be construed, no Horace to be murdered. Fling the fellows behind the fire: burn them whole for all the torture that they have daily, hourly inflicted on man and boy! But stay! Is it possible that, after the mean, bethumbed things have been neglected and hidden away for some months in the remotest shelf, in a Purgatory along with dethroned authors and the "books that are no books," their dry bones may yet live again? Is it possible that, from these arid, dreary plains, in which so long only the grammarian has strayed, whereon none but the scholar has browsed, and only absinth, "stretching far and wide like the sea," has flourished in them—even from these fair blossoms may spring again which shall at last waft us *some*, if not all, of the charm of the Muses?

It is a glad hour; yet would you greatly err should you suppose that even on this day, on which the Pedagogue Retired has been wont to re-enter his prison-house, he feels no regrets. We have heard that, when a clerk or an attorney goes up into the Temple to render thanks to the divine Author of his being, he thanks

God that he is not a schoolmaster. And his gratitude has reason in it, to be sure, but not that kind of reason which the grateful drudge assumes. To him the awful thing, the immunity from which is enough to raise in him the liveliest satisfaction, the dread ogre to be coped with by the less fortunate pedagogue, is the human boy. But far otherwise thinks the Pedagogue Retired. To him, unless, indeed, he mistook his vocation, and threw off a livery that he never ought to have assumed, the chief source of regret on Black Monday, strange and unfathomable as the assertion would appear to grateful clerk and contented attorney, is that he wrestles no more with the ogres, strives no more to civilize and humanize them and bring them into harmony with the nature of their Author, feeble though his own conception of Him may be. The loss of the ogres is water that tempers the wine of his enjoyment.

Then, again, the loss of the games, in the contemplation of which the Pedagogue Retired felt a keen delight long after his own joints were stiff and his back was crooked—that is no light thing; for, in the playing-fields, he was wont shyly to renew his youth like the eagle, as he cheered and shouted with his juniors, or merely stood at gaze. There are storm and stress enough and to spare in assistant-mastery. But, be it admitted, there is fair weather, too; and, thankful as one is to have escaped from the Alpine winters, one cannot forget the long spaces of summer that divided them.

Retired! and thus the high hopes with which we set out years ago are melted away into nothing. To climb the ladder of the profession, to become first one of the Great Beings; and then, when in due course all about us grew a little weary of our Greatness, to be promoted into a quiet professorship, a pleasant benefice, or even a mighty bishopric, and so to live on and die in harness at ninety-five—that was the vista down which in years gone by we peered with wistful eyes. And now that stone palace which we saw in a vision, and the broad paradise that encompassed it, are contracted into a little brick house and a modest rose-garden, as they shall shrink, in turn, to paltry six-foot-by-two. We would shed a tear over visions vanished and blighted prospects were it not that to-day is Black Monday, and to-morrow, in place of construing poor old Horace, we shall be drawing a little earth—*pulveris exigui munus*—over our rose-crowns, and not as a sprinkling to cover the dead, but as a life-giving covering for that which Pæstum itself cannot undo. *Deus nobis hæc otia fecit.*

### COLLEGE OF PRECEPTORS.—HALF-YEARLY GENERAL MEETING.

THE Ordinary Half-Yearly General Meeting of the members of the Corporation was held at the College, Bloomsbury Square, on Saturday, January 20.

The Secretary having read the notice convening the meeting, Dr. WORMELL was appointed Chairman.

The Report of the Council was laid before the meeting, and was taken as read, a copy having previously been sent to every member of the College. It was as follows:—

#### REPORT OF THE COUNCIL.

The Council beg to lay the following Report of their proceedings for the past half-year before the members of the College:—

1. They have to report that the number of entries for the Christmas Examination for Certificates is 7,340, while the number of entries for the Junior Forms Examination is 2,142. At the Midsummer Examination, the total number of entries was 6,130; so that the total for the present year is 15,612. The Public Distribution of Prizes and Certificates to the successful candidates at the last Midsummer Examination took place at the College on October 26, when the Chair was occupied by the Bishop of London. Due notice will be given of the time and place of the forthcoming Distribution.

2. The Professional Preliminary Examination for intending medical students and others was held, as usual, in the first week of September, and was attended by 208 candidates. In their last Report the Council called attention to a protest which they had felt themselves constrained to address to the President of the General Medical Council against statements made in a Report of the Education Committee of that body with regard to the standard of the College Second Class Examination as compared with that of the Oxford and Cambridge Junior Local Examinations. In the reply of the President, attention was called to the appointment of educational experts by the Education Committee of the Medical Council for the purpose of advising them as to the relative standard of the various Junior Examinations recognized by the Council, and the report made by these experts is referred to in the Report of the Education Committee, which was submitted to the Council at their

meeting last month. The Medical Council, however, did not adopt the Report of the Education Committee at this meeting, and have deferred their final decision on the matter till their next meeting, to take place in May, 1900.

3. For the Christmas Examination of Teachers for the College Diplomas 263 candidates have entered, being an increase of 53 on the number of entries for the preceding Christmas Examination. At the Midsummer Examination the number was 176, making the total number of Diploma candidates for the year 433. The Examination will be held in London and at the following local centres:—Birmingham, Bristol, Leeds, Manchester, Worcester, Jersey, Croydon, Kingston (Jamaica), Buenos Aires, Graaf Reinet, and Hong Kong.

4. In addition to their own examinations of pupils and teachers, and the examination of a number of schools by visiting examiners, the Council have conducted, during the past half-year, the Preliminary Examinations of the Pharmaceutical Society of Great Britain and Ireland.

5. The Twenty-seventh Annual Series of Lectures to Teachers on "The Science and Art of Education," which began in February last with a course of twelve lectures on "Moral Education," by Prof. James Sully, M.A., LL.D., was completed by a course of twelve lectures on "The Teacher and the Class," by Mr. P. A. Barnett, M.A. The Council, having accepted the invitation of the authorities of the English Education Exhibition to co-operate with other educational bodies in holding conferences of teachers in connexion with the Exhibition at the Imperial Institute, South Kensington, have deemed it advisable to defer the holding of the next Winter Meeting of Teachers, which would have taken place in the same week, till January, 1901. The day assigned to the College of Preceptors is January 6, and it is proposed on that day to discuss the question of the conditions of formation of a register of secondary schools. Other questions will be discussed on subsequent days, under the auspices of other bodies. All the discussions will be open to the public.

6. The usual Monthly Meetings of the members have been held during the past half-year, at which the following papers have been read:—On October 13, by R. Wormell, Esq., D.Sc., M.A., "On Inspection and Science Teaching"; on November 16, by the Rev. J. O. Bevan, M.A., "On the Board of Education Act in its bearing on Private Schools"; and on December 6, by Sir Joshua Fitch, M.A., LL.D., "On Some Lessons from Thring's Life." The substance of the papers and the discussions on them have been reported, as usual, in the *Educational Times*.

7. The Board of Education Act received the Royal Assent on August 9, and will come into operation on April 1 next. In the absence of precise definitions, it is hardly possible to forecast the effects of a measure which is avowedly only intended to pave the way for further measures for the better organization of the secondary as well as the primary education of the United Kingdom. It is not anticipated that anything in the nature of revolutionary changes in the present system of secondary education will ensue, and ample time will probably be afforded for the many schools and teachers, whose interests may be affected by the working of the Act, to strengthen their position and to prove themselves worthy of retaining their place in the educational machinery of the country. The present desire of the Government to avail themselves of existing agencies for the improvement of secondary education is shown by the reinstatement in the House of Commons of words in Clause 3 which had been struck out during the passage of the measure through the House of Lords, and which provide that the Board of Education may inspect any school, not only by their own officers, but also "by any University or other organization."

8. The Council have been enabled, out of the surplus funds accruing from the regular operations of the College to provide for the outlay on account of scholarships for intending teachers, and to place the sum of £100 to the credit of the Benevolent Fund. They have not, however, been able to make any further addition to the Teachers' Training Fund, the residue of which amounts to about £2,650.

9. During the past half-year, the Diploma of Licentiate has been conferred on seven candidates, and that of Associate on thirty-nine, who had passed the required examinations. Eighteen new members have been elected, and notice has been received of the withdrawal of five. The Council regret to have to report the death of a member of their body, the Rev. R. Alliot, and also of the following members of the College:—Mr. W. T. Biggadyke, A.C.P., the Rev. Canon Boger, Mr. J. Featherstone, Mr. J. Morgan, L.C.P., and Prof. C. H. Schaible.

Mr. BECKTON said he should be glad to have some information with regard to the General Medical Council, who had recently decided that candidates for registration as medical students should be examined on First Class papers. The College required that candidates for a First Class Certificate should pass in seven subjects at least, and also obtain a certain aggregate of marks, which would, in most cases, make it necessary to offer more than seven subjects. It was well known that the College First Class was far more difficult to get than the Oxford or Cambridge Junior Local Certificate, or the Certificate of the Educational Institute of Scotland, which was still recognized by

the Medical Council. He suggested that the Council of the College should agree to examine intending medical students in the six subjects required by the Medical Council, and that no definite aggregate of marks should be required.

The DEAN explained that the result of the vigorous protest that the College had made against the imperfectly informed action that had been taken by the Medical Council was that a committee of educational experts had been appointed, to assist the Medical Council in coming to a definite decision on the respective standards of the various junior examinations which were recognized as qualifying for registration. The experts had accordingly reported; but, instead of at once accepting and acting on their report, the Medical Council had deferred coming to a decision until the experts had been requested to supply the reasons for the opinion they had come to; so that, practically, the report was hung up until their next meeting. With regard to the question of satisfying the examination test in six subjects, the Council were perfectly willing to examine in any number of subjects, and to certify that the candidates had passed in those subjects; but whether the Medical Council would accept such a certificate without requiring a fixed total of marks to be obtained he could not at present say.

Mr. THORNTON said he noticed that, for the present year, the number of candidates presented at the pupils' examinations was 15,612. It was not many years back that the total number of pupils examined annually by the College exceeded the total number who presented themselves at both the Oxford and Cambridge Local Examinations; but, in a paragraph which recently appeared in the *Times*, it was stated that during the past year over sixteen thousand candidates had attended the last Cambridge examination. He would be glad to know whether there was any immediate prospect of the College recovering some of the lost ground.

Mr. G. BROWN said the question raised by Mr. Thornton was a very important one. For some time past the College had been making the Second Class Examination more difficult in proportion than the First Class or the Third. This being so, there was a temptation on the part of masters to save the reputation of their schools by sending in their pupils to the Oxford and Cambridge Local Examinations.

Mr. VINCENT said he was of opinion that the standard of the papers set for the College examinations should be more uniform and regular. If greater care were not taken to secure uniformity, complaints would continually arise, and the number who attended the examinations would decrease.

Mr. STEWART said his own experience of the Cambridge examination and that of the College (which in past time had been a fairly extensive one) was that the Second Class Examination was slightly more difficult to pass than the Cambridge Junior. As to uniformity of examination papers, he thought the Dean would be the first person to admit that they were not always equal in standard; but neither would the desired uniformity be found in the Oxford or Cambridge papers. It was hardly possible to secure that the papers should be of exactly the same standard unless the questions were the same from year to year, or only so far altered as to give an appearance of novelty.

The DEAN said that, since the institution of the Oxford and Cambridge Preliminary Examinations, which covered ground which had hitherto been occupied by the College Third Class, there had naturally been a falling off in the numbers attending the College examinations; but it was important to note that the number of candidates at the recent Christmas examination was practically the same as at the previous Christmas.

With reference to paragraph 4, Mr. ORCHARD congratulated the Council on the high character of the lectures to teachers delivered by Mr. Barnett, which had been most highly appreciated by those who had attended his course.

Mr. THORNTON remarked that some time ago the Council announced their willingness to arrange for similar courses of lectures to be delivered at provincial centres on receiving applications from local committees, and to defray some part of the expense that might be incurred thereby. He had not heard, however, of any provincial centre having taken advantage of the opportunity. He thought that this was owing to the fact that the offer of the Council had not been widely enough advertised.

Mr. PINCHES said the Council had promised that, if application were made for a course of lectures in connexion with the training of teachers, they would be prepared to provide a lecturer for the purpose, but he had no recollection of any undertaking having been given to defray part of the cost of such lectures. It was

agreed that they would send down a lecturer, on condition that all expenses incurred were guaranteed by the local committee applying for such assistance.

In reference to paragraph 7, Mr. G. BROWN asked whether the Joint Committee for promoting legislation for secondary education was still in existence.

The DEAN replied that it had not been formally dissolved.

Mr. G. BROWN said when that Committee was constituted it was distinctly understood that it was to be a Joint Committee of representatives of teaching bodies; but, later on, representatives of administrative bodies were admitted to it, thus completely altering its character. If there were any likelihood of the Joint Committee being called together again, with the administrative bodies still represented on it, he was not sure that the College would be justified in continuing to take part in its proceedings.

The DEAN said he did not think the object of the formation of the Committee was in danger of being defeated. In reply to a further question, he said it was not yet known how the Consultative Committee was to be appointed. In the first instance, the members would be appointed by the Crown, and, afterwards, it was understood that it would consist of elected representatives.

Mr. THORNTON asked whether any information could be given as to the number of persons who had joined the College in consequence of the step taken by the Council some few years back, for admitting holders of the College diplomas to the privileges of membership without payment of the annual subscription.

Mr. PINCHES replied that there had been a falling off in the members' subscriptions, but hardly to the amount that was anticipated. He believed that the number of those who had availed themselves of the privilege was about forty each year.

The Report of the Council and the accompanying statement of accounts were then adopted.

The meeting then proceeded to the election of twelve members of the Council to fill the places of those retiring by rotation, and three Auditors.

The CHAIRMAN having appointed Mr. Beckton and Mr. Brewer to act as Scrutators, the voting papers were distributed and the election was proceeded with. On the Scrutators subsequently presenting their report, the Chairman announced that the following had been duly elected:—

#### MEMBERS OF THE COUNCIL.

Miss M. E. Bailey, 63 Kensington Gardens Square, W.  
 Rev. G. C. Bell, M.A., Marlborough College, Marlborough.  
 Rev. A. W. Boulden, M.A., L.C.P., Christchurch Vicarage, Erith.  
 Mrs. Bryant, D.Sc., F.C.P., 12 Gayton Crescent, Hampstead, N.W.  
 R. F. Charles, M.A., 65 Dartmouth Park Hill, N.W.  
 Miss E. Day, Greycoat Hospital, Westminster, S.W.  
 Rev. S. F. Hiron, LL.D., D.C.L., 34 Cliveden Place, Eaton Square, S.W.  
 Miss S. Jebb, Lyndhurst, Hextable, Swanley, Kent.  
 J. V. Milne, B.A., Streete Court, Westgate-on-Sea.  
 Barrow Rule, F.C.P., Lightney House, Aberdeen Road, Croydon.  
 R. P. Scott, M.A., LL.D., Parmiter's School, Victoria Park, N.E.  
 J. Walsley, B.A., The Grammar School, Eccles, Manchester.

#### AUDITORS.

J. Bell, M.A., LL.D., 31 Caversham Road, N.W.  
 Rev. T. Mitcheson, B.A., L.C.P., Clairville, Pelham Road, Wimbledon.  
 James Swift, 229 New Cross Road, S.E.

In connexion with the statement of accounts Dr. BELL said he should be glad to have some information as to the sum advanced to the Joint Scholastic Agency.

Mr. PINCHES said that the Joint Scholastic Agency was started to take the place of two or three other agencies that had previously existed, one of them being the agency which had for many years been carried on by the College. It was started under the auspices of the College, the Teachers' Guild, and the Assistant-Masters' Association, with the distinct understanding that the three bodies were equally responsible for all expenses in connexion with its working. A Registrar was appointed, and the Agency had been doing a fair amount of business; but it would be readily understood that in starting such an undertaking it was necessary to have a certain amount of money in hand; and as Treasurer he took upon himself to suggest that the College should advance what was required within certain limits, on the explicit understanding that the three bodies were equally liable for any loss that might accrue. The sum authorized to be advanced was not to exceed £200, and he was happy to say that already a certain portion was being returned, which would appear in the next balance sheet.

Mr. CHARLES pointed out that the money was only lent, and he had no doubt the Agency would soon become self-supporting. All that was wanted to make it a great success was the support of the headmasters.

The DEAN then presented his Report, which had been printed and distributed among the members present, and which was as follows:—

#### THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Christmas Examination of candidates for Certificates took place on the 5th to the 9th December at 260 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Aldershot, Anerley, Ashbourne, Aylesbury, Balham, Bamford, Banbury, Barnsley, Bath, Bedford, Bexhill, Biggleswade, Birkenhead, Birmingham, Blackpool, Bodmin, Bognor, Bolton, Bournemouth, Bovey Tracey, Bradford (Yorks), Brentwood, Bridgwater, Bridlington, Brighton, Bristol, Bromsgrove, Buckingham, Bungay, Burnham (Som.), Burnley, Bury St. Edmunds, Buxton, Calne, Cambridge, Cardiff, Carnarvon, Cheltenham, Chepstow, Chertsey, Chester, Clacton-on-Sea, Clevedon, Cotes, Crowe, Croydon, Derby, Devizes, Devonport, Doncaster, Dover, Durham, Ealing, Earl's Colne, Eastbourne, Edinburgh, Epsom, Evesham, Exeter, Faversham, Gillingham (Dorset), Goole, Gravesend, Grimsby, Guildford, Halesowen, Halifax, Harleston, Harrogate, Hartlepool, Hastings, Hatfield, Haverfordwest, Hawkhurst, Hereford, Herne Bay, Hornsea, Huddersfield, Hull, Hulme, Hythe, Ilfracombe, Ilkley, Iron Bridge, Jersey, Kingsland R.S.O., King's Lynn, Kirkby Lonsdale, Leamington, Leeds, Leek, Lincoln, Liskeard, Littlehampton, Liverpool, Llandudno, London, Longton (Staffs), Loughton, Lowestoft, Ludlow, Luton, Lydney, Maidenhead, Maidstone, Malmesbury, Malvern, Manchester, Margate, Marlborough, Middlesbrough, Midhurst, Morecambe, Newbury, Newcastle-on-Tyne, Newport, Newport (Mon.), Newton Abbot, Northampton, Norwich, Norwood, Nottingham, Ongar, Penge, Penketh, Penzance, Plymouth, Pontefract, Portsea, Portsmouth, Putney, Ramsgate, Reading, Reigate, Rhyl, Richmond-on-Thames, Romford, Royston (Herts), Ryde, Safron Walden, St. Anne's, St. Austell, St. Ives, St. Leonards-on-Sea, St. Neots, Sale, Sandwich, Scarborough, Selby, Sheffield, Shepton Mallet, Shirley, Shoreham, Shrewsbury, Sittingbourne, Southampton, Southbourne, Southend, Southport, Spalding, Stanford-le-Hope, Sudbury (Suffolk), Sunderland, Swindon, Tamworth, Taunton, Teignmouth, Thorne, Tiverton, Torquay, Totnes, Towcester, Trowbridge, Tunbridge Wells, Ullesthorpe, Waltham Cross, Walton (Liverpool), Wanstead, Wateringbury, Watford, Wellington (Salop), Weston-super-Mare, Whitechurch (Salop), Wigton, Wincanton, Winchester, Windsor, Wincambe, Wisbech, Witney, Wolverhampton, Woodford, Worcester, Worksop, Worthing, Yalding, Yeovil, and York. The Examination was also held at Batticaloa (Ceylon); Chefoo (N. China); Nassau (Bahamas); Georgetown (British Guiana); St. George's (Grenada); Kingston and Stewart Town (Jamaica); Lagos; Freetown (Sierra Leone); and Port of Spain (Trinidad).

The total number of candidates examined (not including 188 examined at Colonial Centres) was 7,042, of whom 4,171 were boys and 2,871 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined for Certificates during the year (not including those who attended the supplementary examinations in March and September) was 11,863.

The following table shows the proportion of the candidates at the recent Examination who passed in the class for which they were entered:—

	Entered.	Passed.	Percentage.
First Class	570	281	49
Second Class	2,788	1,294	46
Third Class	3,684	2,643	72

The above table does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered.

The number of candidates entered for the Junior Forms Examination (not including 58 examined at Colonial Centres) was 2,046—1,050 boys and 996 girls. Of these, 1,407 passed, or 69 per cent.

At the supplementary Examination for First and Second Class Certificates, which was held on the 5th to 7th of September, in London and at four Provincial Centres, viz., Birmingham, Bristol, Leeds, and Liverpool, 204 candidates presented themselves. The number of candidates examined at these supplementary examinations during the year was 427.

The Christmas Examination of Teachers for the College Diplomas took place on the 1st of January and five following days in London and at the following Local Centres:—Birmingham, Bristol, Croydon, Jersey, Leeds, Manchester, South Shields, Worcester, Buenos Ayres, Graaf Reinet (Cape Colony), Hong Kong, Jamaica, and Belleville (Ontario). It was attended by 241 candidates, of whom 174 were men and 67 women. The subjects of examination included the Theory and Practice of Education, Scripture History, English Language, English History, Geography, Arithmetic, Algebra, Euclid, Trigonometry,

Analytical Geometry, Differential and Integral Calculus, Latin, Greek, French, German, Spanish, Natural Philosophy, Astronomy, Physics, Animal Physiology, Botany, Geology, Chemistry, Drawing, and Music. On the results of this Examination, one candidate obtained the diploma of Fellow, six that of Licentiate, and 57 that of Associate.

The number of schools examined during the year under the Visiting Examination Schemes (A) and (B) was 29.

The Preliminary Literary Examinations of the Pharmaceutical Society have been held, as usual, at the times appointed. The number of candidates examined during the year was 1,530. The College has also conducted Scholarship Examinations for St. George's Hospital Medical School.

The DEAN, in reply to criticisms on the examination questions, said that he thought the examiner in Third Class Geography was justified in putting a question on rainfall and climate, because, after all, it was not a very difficult thing for children to understand that the West of England had more rain than the East, or that more corn was grown in Essex than on the Yorkshire moors. As to the First Class Arithmetic paper, it seemed to be forgotten that there were at the end three questions for the benefit of those who could not do the more difficult problems. The paper, as a whole, should be sufficiently difficult to test good candidates who aimed at distinction in the subject; but, at the same time, it had to serve as a pass paper; and, on the whole, the plan of putting alternative questions at the end had been found to work well. The results did not show that the paper in question had been found too difficult for average candidates. As to the Third Class French paper, to which reference had been made, he might say that it had been carefully arranged so that the sentences to be translated into French were based on those to be turned into English. In the Third Class History paper every question had an alternative; and he must say he had been particularly pleased with the simple character of this paper. With regard to the Junior Forms French paper, he was inclined to think that this paper was a shade too difficult, and, in marking the answers, allowance had been made accordingly.

The Report of the Dean was then adopted.

A vote of thanks to the Chairman concluded the proceedings.

### CONFERENCE OF TEACHERS AT THE IMPERIAL INSTITUTE

THE Council of the College of Preceptors, having accepted the invitation of the authorities of the English Education Exhibition to take part in a series of Conferences in the Conference Hall of the Imperial Institute, after the opening of the Exhibition by the Prince of Wales on January 5, arranged to hold a Conference of heads of schools connected with the College on Saturday, January 6, on "The Conditions of the Formation of a Register of Secondary Schools."

The Chair was taken by Sir JOSHUA FITCH, who said that, in view of the reorganization of secondary and primary instruction, registration was of great importance, both on professional and public grounds. The particular question to which this morning's speakers would address themselves was the register of schools. But this was part of a larger question, and it presupposed a registration of teachers. It was necessary for the proper organization of a profession that it should be known who belonged to it and what were the qualifications which they severally possessed. A fitting analogy would be found in the medical profession, and in its General Medical Council, which kept a register of all qualified medical men. But more important than the professional interests were the interests of the public which were involved. The public generally wanted to know something, for its own guidance and information, of the persons who entered on the profession of teaching, and what sort of schools they severally conducted. For the interest of the public, as well as for the ennobling and raising of the profession in the eyes of the public, one of the first duties in connexion with the reorganization of secondary education in England should be the preparation of a full register of schools and of teachers. One question which would arise would be as to the nature of the qualifications necessary for registration. For elementary teachers there would, of course, be the certificate granted by the Education Department, while for teachers in higher schools and colleges there were University degrees and the various diplomas given by the Universities and other public bodies for the profession of teaching alone. Another question that would arise was as to any possible classification of the persons thus registered—whether persons who were connected with technical and other special branches should form part of the

general register, or whether they should be registered in their several classes. Then, again, there was the important question, what was to be the legal and conventional value of registration in relation to the parents and public generally—whether there should be any disability attaching to persons or schools not entitled to a place on the register. All these were questions of very great importance which would come before the public in a very pronounced and conspicuous form before long, and he did not know of any subject which could more properly engage the attention of those assembled there that morning.

The Chairman then called on Dr. WORMELL to read his paper on

### THE CONDITIONS ON WHICH A REGISTER OF SCHOOLS MIGHT BE FORMED.

Dr. Wormell said: Before proceeding to the subject which I have the honour to introduce for discussion, I desire to make a few introductory remarks. First, I cannot overlook the circumstances which have led to this Conference. It is an outcome of the fact that our brilliant neighbours across the Channel are about to hold a great Exhibition. They have wisely concluded that, in such an Exhibition, education should be made prominent, and they have, therefore, invited the co-operation of educators in all countries. Let us wish the whole undertaking—the Exhibition in all its features—complete success, and, in particular, let us hope that the improvement of schools and the promotion of general culture may be among the beneficial results. Probably we may be able to give a few hints to others by means of our exhibits; but I am sure that, if our eyes are kept open, we may receive far more hints from the contributions of other nations. Kipling has well asked: "What do they know of England who only England know?"

My second remark has reference to the Board of Education Act. No conference on education could be profitably directed at the present moment if it did not keep before it the potentialities of that Act. Let me say I do not share the misgivings which some express with regard to the intentions of the Government in developing the Act. It is not to be a dead letter. Its authors intended it to initiate great movements, and honestly meant it to be as a fruitful tree well planted. Let us continue to receive it without suspicion; let us tend it with care, and water it with assiduity. Great social problems are always solved in England after much political mending and patching. As a great statesman once said: "Thorough remedies are never immediate; immediate remedies are never thorough."

The Government will not begrudge the necessary aid for the complete organization we need. They will not spend all they have on guns, machines, and inanimate agents. "The strength and wealth of nations," said Mr. Smiles, in one of his pithy sentences, "depend upon coal and iron—not forgetting men—more than on gold." Enlightened and educated men are the best part of the national resources in all the leading nations of the world. No Government in England in these days will be so blind as not to see this prominent and palpable fact.

Now I come to my proper subject—the conditions of the formation of a register of secondary schools. The second reason why we want a register of schools is derived from the conditions which must regulate the granting of financial aid from the public purse, the safeguarding of endowments, and the awarding of scholarships. Reasonable evidences of efficiency should be required wherever public money finds its way. As all classes of schools—public, proprietary, and private—should be open to the choice of the gainers of scholarships, all classes should submit to reasonable tests, and be placed on the register when the test conditions are fulfilled. It is well understood now that it is for the public good to foster a healthy spirit of rivalry, and to allow freedom to make educational experiments, even to ride hobbies. It is both a matter of economy and also a matter of common justice and regard for the rights of property to utilize the resources of every kind at present available and worthy of recognition.

The subject may well be considered early, for it touches most others. There is the question of the registration of teachers, for instance. Our subject involves that question, for it is clear that, in gauging the efficiency of a school, we must ask whether the man or woman in charge of it can be trusted to make, and not to mar, the minds and characters of the citizens of the future. In other words, it must be asked whether the head teacher is qualified for registration. But this branch of the subject comes later in the Conference.

The necessity for the registration of schools is evident when we consider the absence of comprehensive, reliable, and well ordered

information. What are the resources possessed by the land for secondary education? Who knows? Some affirm that there is a general dearth in this respect. How do they know? There are no evidences. This is but an assumption. Others say there is deficiency in particular localities unnamed. Still an assumption. There are hundreds of good men and good teachers who would like to know where it would be profitable to establish good schools, and this well known fact contradicts the assumption of a general deficiency. A register of efficient schools is much needed to check these gratuitous and mischievous assumptions. The register must evidently be more than a list of names—it must convey information. It cannot, of course, classify schools in order of merit or grades of merit, nor is it at all desirable that it should. It can state the special aim of the school, or special form of curriculum—classical, mathematical, scientific, general, commercial, technical, &c.—and the efficiency must be judged in reference to the special aim. In a word, the British parent looks for such a register to enable him to make a better instructed choice of the school which will supply his own and his children's need. Good private schools should be encouraged to increase their efficiency and extend their operations, and such encouragement will be afforded by registration. I have said that registration implies the application of reasonable tests of efficiency. What are they? At a former Conference they were laid out with much reasonableness and great knowledge of the circumstances by Mr. E. Pinches, and, because I entirely agree with all he said, and also because I think we should preserve consistency and continuity of argument in our successive Conferences, I venture to quote him. Mr. Pinches showed that the criteria of efficient education may be said to consist of three factors:—(1) Material, in the shape of suitable buildings, fittings, and appliances for teaching; (2) personal, relating to the qualifications of the headmaster or principal and his assistants; (3) the quality of the education given, as evidenced by the results of an independent examination by impartial and competent experts.

The sanitary requirements, the personal qualifications of teachers and their registration, and the examination tests, will all be dealt with in separate papers by those who follow me, and I need not detain you now to consider them. I agree with Mr. Pinches that, if the school-room and class-rooms are capacious enough, the means of ventilation, warming, and lighting satisfactory, and the sanitary appliances sufficient, the building as a whole should be held to be adequate, although it may be but a private house adapted to the requirements of a school.

Two questions remain—first, what are we to do with the inefficient schools? I reply: Refuse to register them—ignore them. If, from a sanitary point of view, they are dangerous to the community, then the sanitary authority can deal with them. Otherwise I would apply a maxim I have lately read in a work of fiction. I may confess, in passing, that lately I have taken violently to novel reading, and I find in novels much useful philosophy. The moral of my latest is stated in these words: "Strengthen the wheat and it will choke the tares; refine the gold and the dross will be consumed." This maxim will apply well to our schools as soon as we get a complete register of those that are efficient.

The last point I wish to urge has reference to the authorities. We have made up our minds, I think, that there are functions which can only be worked by a Central Authority, and there are others which require a Local Authority. There is a Scylla and a Charybdis to be avoided: the Central Authority provided by the new Act may keep us from the one, the Local will protect us from the other. These two dangers are well described by Edward Thring as "Bumbledom and King Log." As Thring said, "a good phrase is worth ten thousand arguments." Now, without Local Authorities, we may be under King Log. Without the Central Authority we may suffer from the corruption and partiality of Bumbledom. Unrestrained Bumbledom is often corrupt, rarely enlightened and impartial. Uneducated itself, it cares less for education than it does for its own party prospects. Yet it is generally keen and alert in the collection of local knowledge; and directed Bumbledom may place at our service its useful qualities without exercising its prejudices. It is clear that the registration of teachers must be conducted by the Central Authority, for the qualifications of teachers are independent of locality. It is equally clear that the registers of schools should be in the first place prepared locally. The rules and regulations, and also the *criteria* of efficiency to be applied, should emanate from the Central Authority, and to this Authority there should be allowed an appeal from schools unfairly neglected by the Local Body charged with the duty of preparing the register.

Dr. A. NEWSHOLME then read a paper on  
THE ESSENTIALS OF SANITARY SCHOOL PREMISES,  
of which the following is a summary:—

Although Section 3 of the Board of Education Act, 1899, leaves it optional on the part of the Board of Education whether they will inspect or not, on the part of proprietors and directors of secondary schools whether they will submit to inspection or not, and on the part of the Councils of counties or county boroughs whether they will contribute towards the expense of inspecting under this section, there is little doubt that in the near future a large proportion of secondary schools, whether under private management or under the control of committees or limited companies, will be submitted to inspection in accordance with its terms. The inspection is defined as being "for the purpose of ascertaining the character of the teaching in the school, and the nature of the provisions made for the teaching and health of the scholars." Under these circumstances it is desirable that the scope of the inspection, so far as the health of scholars is concerned, should be freely canvassed, and that school proprietors and teachers should know what may reasonably be expected of them.

In ascertaining what is now considered by the Education Department to be necessary to place school premises in an efficient hygienic condition, they have a convenient and exact guide in Schedule VII. of the Code of Regulations for Elementary Day Schools, which specifies the structural requirements in the planning and fitting up of public elementary schools. Article 85 (a) of the Education Code states that "all new school premises and enlargements must conform generally to the rules contained in Schedule VII." It is evident that a distinction, which is perfectly reasonable, is here drawn between *new* school premises and those already existing, and it is implied that the same standard cannot be enforced in old as in new buildings. This is an important point, as, under the circumstances in which secondary schools usually exist, they generally consist of large private houses adapted for the purposes of school life, and added to as the growth of the school demands. I shall take this view of the case, and state as succinctly as possible what I consider to be necessary sanitary requirements of buildings used as schools, assuming each school to consist of a private house, of sufficient size and well built.

Not the least important matter, if any choice exists, is that the school must be well situate so far as its surroundings are concerned. It is not likely that any existent school would be condemned on this account; but, if any choice is possible, the following conditions must be fulfilled:—The vicinity of a main street, having heavy and noisy traffic, or of any noisy factory, railway-station, &c., is most undesirable. Trees overshadowing the house are undesirable, as they impede the free entrance of light and air. The close vicinity of higher buildings, overshadowing the school, is also most objectionable. An uninterrupted sky-view from each window is the ideal, to be approached as nearly as is practicable. There should be ample space for a playground, or, in the alternative, ready access to a field for cricket and football. The Education Department requires that an open space of at least 30 square feet per scholar shall be maintained. The aspect should preferably be such that both morning and afternoon sun will enter the class-rooms. The rooms of a private house adapted for a school can never be made so perfect as when the building is properly planned as a school from the beginning. For reasons already given, I shall assume, however, that the present rooms will be allowed to remain. The proper width of a school-room according to the Education Department's requirements, is from 18 to 22 feet, while class-rooms must never measure less than 18 by 15 feet. The use of movable partitions is deprecated, and each class-room ought to be capable of being cleared without disturbing any other room. Entrances should be separate for each department of a large school, and the principal entrance should never be through a cloak-room.

In conclusion, Dr. Newsholme said: It would be quite easy to extend this lecture by entering into various miscellaneous requirements of school life. A fresh branch of the subject of school hygiene would be opened out were we to discuss the mental hygiene of school work, or the extremely important question of the prevention of infectious diseases in relation to school life. I have, however, confined my remarks to the more prosaic and less interesting problems involved in the construction and management of schools. The problem of ventilation of the school towers above all other problems in importance. It is the main question of school hygiene, and, if it be solved, healthy and efficient school-life is ensured. In solving it, the warming of the school must necessarily be considered, and the best solution is found by a combined system of ventilation and warming. It is hardly necessary to remind you, in conclusion, that the function of school education is to prepare a child for his after-life, and the true test of the value of an educational course lies in whether it fulfils this end. In educating the mental and moral we must not neglect the physical parts of a child's nature, if an ill balanced and defective manhood is not to be produced. These different parts of our nature are inextricably associated, and defects in one react injuriously on the others. From this standpoint the commonplace subject which I have had the honour to bring before you to-day is of prime importance to the success of your great work.

The Chairman having invited discussion on the above papers,

Mr. G. BROWN said that, while Dr. Newsholme had given some very good advice as to the construction and fitting up of school premises, it was apparent that he had in view more or less ideal conditions with which very few schools at present carried on in private houses could comply. With regard to private schools, the new Board of Education might reasonably be expected to use a wise discretion in the exercise of its powers for ascertaining the suitability of the buildings and the adequacy of the means of instruction provided. He could not help thinking that, if the criteria suggested in the paper were strictly applied, not only school premises, but a large proportion of the churches and chapels in the country would require to be reconstructed. Not a few of the ideas that were put forward respecting the healthy conditions of a school must be characterized as utopian. How, for instance, could it be guaranteed that the pupil's seat should always be placed at a certain angle to the sun's moving light? Then, as to the posture of the children at their desks: no doubt, there were certain positions which, if too long persisted in, would be detrimental to health; but it was difficult to see how time could be found for the constant observation of these minute details.

Mr. BLOMFIELD hoped that the inspectors chosen would be men who were not prejudiced in favour of any particular class of school, and that the fullest sympathy would be shown with those who had hitherto borne the heat and burden of the day.

Mr. GUTTERIDGE would like to know how far down in the school the rule as to registration of the teaching staff should extend. In the case of schools deemed by the inspector to be inadequately equipped, he presumed that time would be allowed for making the changes required in order to secure efficiency.

Miss RAMSAY said the difficulty with regard to the angle of sight could be met by having movable chairs and desks. She had seen cases of spinal complaint which were clearly traceable to the adoption of a bad position while writing; whereas, if the teacher had paid proper attention to the attitude of the children, much suffering might have been avoided.

Mr. LIGHTWOOD remarked that as the Chairman of a District Council he had never met with any case of resistance to a thorough examination of school premises by a sanitary inspector.

Mr. MILLAR INGLIS did not think private-school teachers sufficiently recognized the advance of public opinion with regard to educational requirements. Too much trouble could not be taken to improve their school-rooms, the furniture, and the teaching staff, in order to meet the requirements of the present day.

Mr. WILSON said that as a private-school teacher he should welcome inspection. Of course, they all desired to be dealt with sympathetically, and the inspectors should not be too exacting at the outset.

Mr. SOUTHER endorsed Mr. Wilson's remarks. They had no reason to expect the public to support them unless their school buildings were healthy and properly adapted for the purposes they had to serve.

Mr. WILLIAMS suggested that the sanitary condition of the building should come first in order; after that, evidence of good teaching should be looked for; and, thirdly, the technical qualifications of the teacher should be inquired into.

Mr. PRITCHARD would like to know whether Dr. Newsholme's calculations were based on the assumption that the children were in the schoolrooms the whole of the day.

Dr. WORMELL, in reply, said the answer to Mr. Gutteridge's question would probably be given at one of the later conferences, when he (Dr. Wormell) had undertaken to open the discussion on the subject "What should be the terms of admission to the Register for Teachers for those about to enter the profession?" There were two aspects of the question of the order of the criteria for efficiency. In one, he quite agreed with the suggestion that the quality of the work should be put before the qualification of the teacher; but when they got the whole scheme of the registration of teachers in proper working order, it would surely be required of those entering the profession, besides the possession of an academical qualification, that they should know something about the principles and practice of education.

Dr. NEWSHOLME, in reply, said Mr. Brown had not discussed the points raised in his paper. He quite agreed with what had been said as to the necessity for a sympathetic attitude on the part of the inspector, and a much lower standard would have to be adopted with regard to old schools than for those newly erected. It would be gathered from the "Code of Regulations" with regard to elementary schools, that the inspection of schools would be within certain well defined limits, and no secondary school that failed to fulfil the requirements there set forth ought to be registered. His calculation with regard to the amount of air space in a schoolroom was not based on the assumption of its being occupied for the whole day; and, if it were occupied for only a single hour, ten square feet of floor space for every scholar should be allowed in new schools, and about seven square feet of floor space in old schools, as required in elementary day schools by the Education Department.

Sir JOSHUA FITCH hoped that teachers generally would carefully study Dr. Newsholme's paper, so that they might see the goal they ought to aim at. As to Government inspectors insisting on impossible

and ideal conditions in buildings which had been constructed for other than school purposes, he thought, from his experience as an old Government official, it might safely be assumed that even Government inspectors were amenable to ordinary considerations of common sense, and that no unreasonable conditions would be imposed. The public interests ought to come first, and, unless efforts were made in all the existing public or private schools to attain a higher standard of hygienic and sanitary efficiency, those schools must suffer in the long run.

#### Afternoon Sitting.

Sir JOSHUA FITCH having again taken the Chair, Mr. H. L. WITHERS, M.A., Professor of Education in Owens College, Manchester, read the following paper on

#### EXAMINATION TESTS, ORAL AND WRITTEN.

In opening this brief paper on an important and difficult subject, may I be allowed to say a few words of thanks to the College of Preceptors for its action in summoning this Conference, and for the enterprising policy of which that action is only one example among many? There are many indications—the Exhibition close by is one of them—of the gradual growth of interest in matters of education, both among the public at large and among the sundry kinds of people—administrators, politicians, officials, managers, teachers, and the rest—who are more directly concerned with the questions thus raised. But it is still true that, when we consider the immeasurable importance to the vitality and happiness of the whole nation of a well directed and effectual system of colleges and schools, the most noticeable point about such popular opinion, and even such professional opinion, as exists is its apathy and its helplessness. It was a saying of Thring's that "the waste in a teacher's workshop is the lives of men." No saying could be more manifestly true. Yet can any one say that there are even now an alertness and an energy about the prevention of that waste such as at all correspond with the critical character of the issues at stake? But, if the world in general is not yet wide awake, if the amount of intelligent energy at work upon problems of education is still slight compared with that devoted to other sides of human life, such, for instance, as commerce, or the practice and theory of medicine, yet the College of Preceptors must be acquitted of all blame for any part of this lethargy. For years it has striven to systematize the study of education, and to establish a department of training for teachers. In spite of the wretchedly poor support its efforts have received, it still perseveres, and has quite lately laid us all under a great obligation by securing Mr. Barnett to give that course of lectures which have been published under the title of "Common Sense in Education and Teaching."

The College of Preceptors has thus given practical proof of its belief that there are right ways and wrong ways of doing things in school; that inquiry can show broadly why one way is right and another wrong, and that the general truths thus attained are communicable, and may be of great service to any one whose duty it is to make education as good as it can be made.

The subject which I have the honour to introduce for discussion this afternoon is peculiarly one in which an inquiry into sound and unsound methods is urgently required, and extremely likely to be fruitful in important practical results. I suppose there is no point upon which every one is more generally agreed than that a great deal of the inspection and of the examination which now goes on in this country has a bad effect upon methods of teaching and on methods of study, that it leads to a vast amount of sterile or even mischievous work, and that it produces among those who come strongly under its influence an entirely faulty habit of mind.

The criticism has been expressed with characteristic energy by Thring:—"If education and training are the true aims of mankind, and power in a man's self the prize of life, then no superstition ever ate into a healthy national organism more fatal than the cult of the examiner. A system of examination and inspection, in proportion to its power, is death to all original teaching, to all progress arising from new methods, and even to all improvement which is at all out of the routine track. There is no dead hand so dead as living power thrust in on work from the outside. It is the doctor putting his fingers on the heart when he ought to feel the pulse. Where examinations reign, every novelty in training, every new method of dealing with mind, becomes impossible. It is outside the prescribed area, and does not pay." ["Life," Vol. II., page 130.]

#### EXAMINATIONS ARE NECESSARY.

At the same time, there is no question, as Thring himself would have admitted, that examination and inspection of some sort are absolutely necessary. They are necessary, first, because, from the point of view of sound financial administration, he who pays the piper must be allowed to call the tune, and, when public money is spent, there must be some public guarantee that it is spent to good purpose. They are necessary, secondly, because in almost every calling some minimum standard of qualification must be required from all who enter it; and the possession of this standard must be publicly tested. They are necessary, thirdly, because, at a great many points in life, choice must be made between a number of persons who claim the same position; and this choice cannot be made on public and equitable grounds

except by means of some form or other of examination. Lastly, they are necessary for a quite different kind of reason. The first three reasons—the financial, the professional, the competitive—are not, in the strict sense of the term, educational reasons at all, but arise from certain relations in which, owing to the general nature of human life, education stands to certain other human activities.

#### TEACHERS' EXAMINATIONS.

But the fourth reason is inherent in the nature of the process of education itself, and would continue to exist just as strongly if the educator had nothing more to think of in his work than the pursuit of his own art. Whoever teaches anything must maintain contact with the minds of his pupils, and must know what shapes their thoughts are taking. The contact maintained must be as sensitive and as delicate as possible, but it must also be constant and searching. The procedure of the skilful teacher varies flexibly with the result of his observation upon the mental processes which he has helped to set up. He will constantly be coming to points at which he will feel that, if the mental growth for which he has been striving has, in fact, taken place, then it will show itself in certain verifiable ways. He will verify accordingly, and continue or alter his methods as he finds occasion to do. If no one else examines his pupils, he, at least will be for ever examining them; his whole art and mystery lie in this. Before each lesson begins he will need to know what is the mental stage at which they stand; at the end of each clearly defined step he must make sure, by a recapitulation drawn from the class, that the step has been actually made; at the close he will ascertain that the new knowledge is in hand, and available, by requiring same application of it—that is, by calling for some exercise or some deduction, which can only be worked by those who have, in truth, mastered the new matter, and can wield it to their own purposes. Examination, therefore, is not, in this sense, a thing alien to the process of education, and imposed upon it from without, for the sake of parents, or professions, or Government Departments, but a vital portion of that process itself—one side, indeed, of that *interchange of minds* which is the inmost essence of education. It cannot be psychologically wrong to test instruction. "What comes to nothing is nothing"; and good teaching may be known by its fruits.

#### OUTSIDE EXAMINERS.

But the danger begins when the examiner is no longer the teacher. This also is necessary, and must be indispensably reckoned with. To begin with, the good teacher himself wishes to have his work tested and tried by some one other than himself, on whose judgment he can rely. He will get new notions, fresh points of view, from such an overhauling, and will be saved from routine and one-sidedness. For the less efficient teacher, such a revision, whether by his headmaster or by an outsider, is obviously needed to correct and fortify his procedure. There may also often be cases where the thing of its kind is good, and has been well done, and yet is not the thing which, under all the circumstances, is wanted. Value is not simply constituted by cost of production, but also by demand. Infinity of labour may be put into producing something which, after all, nobody wants. A teacher works in his own corner of the field, and sees all too little of the rest of it. An examiner, if he examines a good deal, must needs take a wider view over a larger breadth of human experience. And then there come in those considerations, mentioned before, of an extra-educational kind. Governors of schools and administrative bodies require some public criterion of efficiency. Pupils must, for certain purposes, be put in an order of comparative merit by an external and impartial judge. Or, again, to take the instance which, in our discussion, we are specially to bear in mind, we may have a public register of certified schools. It is clear that schools cannot certify to their own virtues. *The outside examiner is essential.*

In practice, however, his intervention is often found to work *disastrously*. Why? Because, first, an outside examiner generally means an outside syllabus, which is propounded without reference to individual schools, still less to individual classes, and least of all to individual pupils. The syllabus so propounded will almost certainly begin in the wrong place and end in the wrong place. It will probably require more to be done in the time than can be done healthily and on sound methods. Because, secondly, an outside examiner often does not sufficiently consider the influence which his questions will have upon the work of those who prepare for them, nor the state of mind which a right answer to them will imply. He does not see that the whole of the syllabus ought to be represented in his paper, and that the relative importance of the different parts of the subject ought to be reproduced to scale in the problems which he sets. Thirdly, as questions which test mere information are easily and rapidly made up, while those which require the exertion of mental power on the part of the candidates also require the same exertion on the part of the examiner, the tendency is to ask for information, and not for thinking. Hence the use of "set books" and "commentaries," which need so little thought to study and so little thought to examine. Hence the whole machinery of cram and sterile memorizing, which have led a French philosopher to define an examination as a "permission to forget," because candidates acquire a mass of information which they take care not to digest, but keep crude in their mental

gizzards, so that they may, once and for all, disgorge it on examination day.

I have ventured to recall these trite and only too obvious facts to your recollection because I believe a number of useful conclusions may be arrived at from a consideration of them. We have seen that every good teacher will at every moment keep in contact with his pupils' minds, and inform himself of what is passing in them, and that a system of tests or applications of new knowledge will be an essential part of his method of education, and, consequently, that there cannot be anything vicious in examination as such, but only in the form which such examination takes. We have seen also that the danger begins at the entry of an outside examiner with his ready-made syllabus. Does it not follow from this that the first requisite should be that—subject to the necessary conditions of impartiality and an adequately high standard—the examiner should be in as close touch as possible with the teacher? This leads to a corollary on the nature and qualifications of the examiner. It must mean that the examiner should *have taught*, or, better still, *be teaching*, himself; and that, too, under conditions not entirely unlike those of the school which he examines. A great deal of harm was done in primary schools by creating a body of examiners and inspectors—as such—men, fresh from the Universities, who had done little or no teaching themselves. But, if our analysis has been right, examination is only educationally sound when it is itself a portion of the process of teaching—a finishing touch, which requires from the pupil reasonable evidence that his knowledge is practicably available. A great deal too much use is still made of examiners who have not taught, or who have taught under conditions too different to afford useful analogies. I think myself that it will be a great mistake if, under the new Board of Education, any large number of Government officials are appointed to undertake examinations. Such officials are, in the nature of the case, somewhat too remote and out of touch with school work. They are appointed too young, and they sometimes fail to see that their work is well or ill done according as it helps or hinders really fruitful educational work in the schools.

#### THE PROFESSIONAL ELEMENT NECESSARY.

Neither the Central nor the Local Authority should undertake the work of inspection directly, unless for exceptional reasons and upon appeal, but they should limit their functions to seeing that every registered school is, at intervals, examined and inspected by some competent professional body, such as the Universities or the College of Preceptors. The professional examining boards ought invariably to have a proportion of acting schoolmasters among their members.

Then again, contact between examiners and teachers should be further maintained by the method on which the syllabus is drawn up. In every case where this is at all possible, the syllabus should be propounded in the first instance by the school, then revised, and, if necessary, altered by the examining board. This would restore initiative and self-direction to the teacher, give elasticity to the curriculum, and bring untold relief to thousands of pupils. It would redeem the system of examination from the well deserved reproach of woodenness and of Chinese uniformity. It would enable schools to develop a mind and a will of their own—to form a *character*, in fact.

I am well aware that there is a very grave difficulty in doing this where any sort of certificate depends on the examination. Such a certificate is required to mean the same thing at all times and in all places; otherwise its value would be variable and uncertain. But this difficulty is not insuperable. To begin with, it points to the necessity of keeping such certificates as few in number as possible. A leaving certificate at the close of the school course will serve the purpose of matriculation at a University, or of a preliminary examination at the commencement of study for a profession. Such a certificate should be all that most pupils require; and even for this a liberal system of equal options in different subjects, or sections of subjects, should secure a sufficient degree of variety. And, in any case, let there be no set books, or as few as possible. Let the examinations test power and method rather than information.

#### ORAL EXAMINATIONS.

For this purpose written examinations should be, wherever possible, supplemented by oral—supplemented, I say, not supplanted, for the two things serve different purposes. The powers of continuous thinking and of literary composition are tested by writing in a way that is impossible by word of mouth. Moreover, in advanced work, it is not practicable to deal orally with difficult problems. Again, in a *viva voce* examination any one question can only be put to one boy, and the examiner can only guess very vaguely how many others could have dealt successfully with it. Oral examinations are apt to deal too exclusively with the *small change* of knowledge, items of information that can be handed over in the silver of speech rather than those "long investments" of the mind, the real property which cannot in a moment be brought to market, but which make, for all that, far the most valuable of our assets.

Yet oral examinations, conducted by experienced and skilful persons, have certain manifest advantages. A written paper of questions, once printed, is a mechanical, clumsy instrument to serve the delicate

purposes of an intellectual probe. It may proceed on wholly different lines from those on which the candidates have worked; so that it establishes no mental contact at all with them, and fails to unlock their intellectual stores. Yet there it lies upon the desk and cannot readjust itself. The boys come out and call it a "rotten" paper; the examiner looks over their work and pronounces it "feeble" and "disappointing"; and the total result is discouragement and misunderstanding. Compared with this, *viva voce* questioning is a sensitive and searching instrument of great flexibility. It feels for what it wants, and, if it fails by one line, tries another and again another. While the printed paper advances in an immobile mass, the oral examination reconnoitres and skirmishes, and adapts itself to the position which it finds.

In one point more particularly, on which stress has already been laid, oral questioning has a conspicuous advantage. It lends itself very readily to co-operation between the teacher and the examiner. A skilled inspector will almost always begin by asking the teacher himself to examine the class upon one or two topics that have already been studied, or else to continue teaching from the point last reached. This will—in a very few minutes—give him an insight into the general lines and methods which have been followed such as no amount of written papers will ever convey. It will save him bowling wickets, as he might otherwise do, for over after over.

Where the object of an inspection is to judge of the efficiency of a school for purposes of a public register, I venture to think that oral examination becomes indispensable. In this case it is the general tone of the school and the spirit and skill of its instruction that are upon trial. There will be no need to assess the comparative merits of candidates or to produce a numerical estimate in the shape of a mark-sheet. The inspector's object is to ascertain how the pupils' minds are trained, and whether their intelligence is alive and growing. He will wish to see the place as much as possible in a normal condition, not at the close of the academic year, but during the course of it. He will pay heed not so much to the answers given him as to the style and method with which his questions are attacked.

There are a great many important aspects of education which a written paper never even touches. It is a commonplace that natural science is, as a study, worse than useless, unless pupils learn to conduct experiments and to manipulate instruments themselves. We are beginning to see an analogous truth in regard to modern languages. The University of London has lately instituted *viva voce* reading and talking for the French and German examinations in its Arts course. The Education Department now requires the recitation of a certain number of lines of French from every student who presents the language as a subject for his certificate. These innovations, I have good cause to know, have worked wonders for the improvement of linguistic teaching among the persons affected. The College of Preceptors offers an oral examination in modern languages, as a first step; later on, perhaps, it will see its way to making such an examination an obligatory condition of every modern language certificate. Every test in science should be partly experimental; every test in modern language should be partly oral, or else the inevitable consequence is faulty and mischievous methods of study.

Again, in *viva voce* examining, whether of a class or of a single candidate, other mental qualities than memory and fluency are tested. I remember hearing the late Master of Balliol, when some one objected to him that a *viva voce* examination was unfair to very nervous candidates, reply that extreme nervousness ought to tell against a man; and, contrariwise, that a good address and ready self-possession are qualities so valuable in the discharge of public duties that it is to the public interest they should be known to carry weight and to influence success in examinations. It is certainly true that we ourselves all act upon some such theory. Who would dream of appointing a clerk or a servant upon written testimonials only? It is the personal interview which decides us.

It is admitted that the lack of clear articulation and the lack of full and continuous expression in speech are among the most obvious deficiencies of Englishmen, young and old. Searching and stringent oral examinations will force us to pay more attention to this fault.

#### GENERAL CONCLUSIONS.

I venture to suggest, as a general conclusion, that, in the highest classes of a school with pupils nearly adult, with whom it is both necessary and right to look for "results," written examinations are indispensable. These might take the form of an examination for a "leaving certificate." That, in the lower classes, where processes are infinitely more important than results, and where the chief danger is the forcing upon teachers of an inappropriate syllabus, and upon pupils of premature formulation of certain ill-digested notions, *inspection*, during the course of the school year, with careful observation of teaching methods, and particularly of practical work, and with brief oral examinations, should be the instrument employed.

Written examinations should be sparingly used in lower forms, and should be conducted by the teachers themselves or by the headmaster. The Central Educational Authority should not, unless upon appeal, and by exception, examine or inspect, but should name professional boards

of proper academic competence to do the work. The syllabus of work should, so far as possible, be propounded, in the first instance, by the schools, not by the examining boards; and upon all examining boards there should be an adequate representation of acting teachers. "Set books" should be discouraged, and examination should, as far as possible, take the form not of the exaction of formulated or dogmatic knowledge, but of the setting of deductions or problems, the solution of which will at once imply correct knowledge, and demand the power to apply it. In this way examination will serve as a natural corollary to teaching, and will cease to be a disturbing and perverting influence upon it.

Miss E. WILLIAMS, President of the Franco-English Guild, was then called upon by the Chairman to read her paper on

#### ORAL EXAMINATIONS IN FRANCE.

In France all examinations in arts and sciences, from the *certificat d'études*, which children pass on leaving the primary school, between the ages of eleven and thirteen, to the *doctorat*, qualifying for a professorship in one of the faculties, consist of two parts—the first written, and the second *viva voce*. Candidates whose written work has satisfied the examiners are declared *admissibles*, which means that they are allowed to take the second part of the examination; but, if they fail at the *viva voce*, their success in the first part counts for nothing. They must begin over again from the beginning should they wish to go up for the examination a second time.

In studying the subject of oral examinations in France, we shall find it convenient to divide them into three groups.

#### FIRST GROUP.

The first includes those at which the candidates are simply required to show that they have comprehended and assimilated the information imparted to them in the course of their school career. This group comprises the primary examinations known as the *certificat d'études*, the *brevet simple* and *brevet supérieur*, and the different sections of the *baccalauréat*, which is, as you know, a secondary examination. At all these examinations the *viva voce* consists chiefly in questions put by the examiners on the different subjects in the curriculum. The test in ancient or modern languages consists in reading a text aloud and translating it into French; and in the case of modern languages answering a few questions in the language in which the candidate is being examined.

The percentage of failures at these oral examinations varies. At the *certificat d'études*—passed, as I have said, by children from eleven to thirteen years of age—the failures are very rare; not more, I am told, than one in a hundred. At the *baccalauréat* about five out of fifteen fail—that is to say, one-third.

#### SECOND GROUP.

In our second group we place the higher examinations, open to men and women, including the teachers' certificate for training colleges, the *licence*, and *agrégation*, and also the two examinations known as the *certificat* and *agrégation des jeunes filles*, open only to women. It will be noticed that, whereas all the men's examinations are open to women, the women have certain examinations of their own to which men are not admitted.

Theoretically, all examinations in France are professional—that is to say, the diploma granted to successful candidates confers upon them the right to teach. But, in reality, a large proportion of the young men who pass the *baccalauréat*, and even the *licence*, and of the girls who take the *brevet supérieur*, never enter the teaching profession. On the other hand, few, if any, candidates work for the training college certificate, for the men's *agrégation*, or for the special examinations for women, without intending to become teachers. This being the case, it will easily be understood that the *viva voce* examinations in this higher group are conducted on different lines from those of which I have already spoken. At these examinations candidates are required to show that they are able to impart to others the knowledge they have acquired and also that they have some originality of thought.

It will be impossible for me to enter into a detailed study of all the oral examinations in the group we are now considering; for, at the men's *agrégation* alone, what is known as the section of letters is divided into six parts, each with its own separate examination in classics and French literature, or grammar, or history, or philosophy, or one modern language. The women's *agrégation* has two sections—letters and sciences, each with two subdivisions; on the one side mathematics or natural science, on the other history or literature. Each of the oral examinations is not the exact counterpart of the others, as we shall presently see. I have, therefore, chosen two of these higher examinations which it seemed to me might specially interest my hearers, in order to give a detailed account of the way in which the oral part is conducted.

#### AGRÉGATION DES JEUNES FILLES.

We will take first the *agrégation des jeunes filles*, which qualifies women to teach in the higher classes of a *lycée* or secondary school for girls belonging to the State, for it should be clearly understood that these higher examinations are conducted by the State, and that their object is to provide teachers for State schools exclusively. This

explains why women have special examinations of their own, the curriculum of a girls' *lycée* differing from that of the boys.

The section of letters has, as we have seen, two subdivisions—history and French literature; but two other subjects—ethics and a modern language, English or German—must be studied, both by history students and by students of French literature, although they will not be called on to teach a foreign language. At the *viva voce* examination the history students give what is known as a *lesson*—but it might perhaps be more correctly defined as a short *lecture*—on history, and another on geography. They have also to explain and comment on an English or a German text. The students of French literature have a lesson on French grammar and another on ethics; a third test consists in a commentary, grammatical and literary, on a French text; and, lastly, they have the same examination in English or German as the others. A certain time, varying from one to four hours, according to the subject, is allowed for the preparation of each lesson. The history students are permitted to consult historical dictionaries and maps. No books of reference are given for any of the other subjects. The lessons are prepared in the presence of an inspector, whose business it is to see that the candidates receive no extraneous help. The average length of each lesson that the candidates give before the examiners is about half an hour. They are allowed one or two slips of paper, on which are written dates, names, and quotations, but are strictly forbidden to read what they have to say; in fact, were a candidate to attempt what I am doing at the present moment, she might be sure of getting a very low mark. The subjects which candidates have to treat all bear on the syllabus they have been studying during the past year. . . .

#### AGRÉGATION D'ANGLAIS.

The second series of oral examinations of which I propose speaking is that of the *English agrégation*, this being the highest examination for teachers of English in the State schools, and open to men and women alike. Women have, as we have seen, their own examinations in letters and sciences; but there is no special examination for women in languages. Those who have to teach a foreign language in a State school are therefore forced to take the same examination as the men. In addition to the translation of a piece of English into French and a piece of French into English, and also a piece of German into English, all these translations being taken from set authors, candidates have to give two lectures, one in French on English literature and one in English on the English language and prosody. But here the regulations differ somewhat from those of the women's *agrégation* in history and French literature. . . .

The failures at the men's *agrégations* and at the special examinations for women are necessarily numerous, as these examinations are all competitive. The number of candidates finally passed depends upon the number of vacancies in the State schools. Not more than two women are admitted at the *English agrégation* each year, because they cannot find posts for more than two. The examiners usually pass on to the *viva voce* examination about twice as many candidates as they will finally admit. Candidates who have done excellent work at the written examination are not always equally successful at the *viva voce*, and, on the other hand, those who have only just scraped through the first part will sometimes show unexpected qualities in their oral examination. There is consequently a general feeling that it is well not to cut down too closely the list of candidates who are to pass on to the second series of tests.

#### MARKS.

It will, perhaps, be asked how in competitive examinations such as I have just been describing it is possible to observe strict equity in the distribution of marks. If each examiner had the sole responsibility of the mark he gives, it might be difficult, as the impression produced by any given test which is neither superlatively good nor superlatively bad undoubtedly depends, to some slight extent, upon the examiner's own frame of mind at the time. But, in these higher examinations, no lesson may be given in the presence of fewer than three examiners, and very often at the women's examinations there are as many as six or seven present. The value of the lesson is frequently the subject of a lengthy discussion. Considerable weight is naturally attached to the opinion of the specialists, and, if even then the examiners cannot agree, they strike a mean. If one examiner insists upon 10 marks and another 12, the marks finally awarded would be 11. I have frequently been present at discussions of this kind, and have been struck by the perfect impartiality of the judges and by the scrupulous care with which they award the marks.

#### THIRD GROUP.

We now come to our third group of examinations comprising the two Doctorates, the first of which is a preparation for what would be called in England a University professorship, while the second, called the *doctorat de l'Université*, lately instituted for the convenience of foreigners, does not confer the right to lecture in a French University. At these examinations the candidate is expected to show that he is capable of doing original work. (A certain amount of research work is required in some sections of the *licence* and *agrégation*; but, as it is not the most important part in these examinations,

I have not insisted on it.) An interesting feature in both examinations for the Doctor's degree is the *soutenance de thèse*, or public debate on the opinions expressed in the thesis. This debate takes place at the Sorbonne, and lasts several hours. Failures after a public debate are rare, but examples have been known of men who had written a satisfactory thesis, yet failed to obtain their degree because they had shown themselves incapable of expounding and defending their opinions in a public debate, or because, in the course of the debate, they had betrayed gross ignorance on subjects with which it was considered that a University professor ought to be acquainted. At the new *doctorat* the debate turns not only upon the written thesis, but also upon two other subjects previously chosen by the candidate and submitted to his judges.

We have seen that in the lowest group of examinations the *viva voce* is conducted almost entirely by means of questions and answers; that in the second and higher group the work of the examiners consists chiefly in listening to what the candidates have to say and determining what it is worth; while in the highest group of all the oral examination takes the shape of a debate between the examiners and the candidate.

#### UTILITY OF ORAL EXAMINATIONS.

The question that still remains to be answered is: Of what use are all these oral examinations, and how do they work?

A few days ago I asked one of my friends who examines for the Doctor's degree of what use the public debate can be at the Doctorate. My question seemed to bewilder him, for Frenchmen look upon oral examinations as a part of the natural order of things. But at length he replied: "Why, it is of every possible use. In the first place [I give you a literal translation of my friend's expressions] a man may write a very good book and yet be a fool. You will never find this out if you only read his thesis; but discuss with him for an hour, and you cannot fail to discover what he is worth. Then again, a future professor must not only be able to write: he must know how to expound his opinions orally, and to defend them if necessary. Lastly," my friend added, "the art of literary criticism is a lost art in France, or would be so were it not for these public debates at the Doctorate, where men who would not take the trouble to write an article on the subject freely pass judgment during the debate on all the faults of composition and style they have found in the thesis, and so help to maintain a certain standard of good writing." . . .

Then there is the question of nervousness. I have come across one or two cases—generally women, who had begun to work for examinations rather late in life—in which the candidate, who had already proved herself an excellent teacher, was so paralyzed in the presence of the examiners as to be struck almost dumb. But these are exceptional cases; in fact, examiners in Paris have frequently been heard to say that women, as a rule, succeed far better in oral examinations than men. It appears they have more self-control, express themselves more easily and—what I am going to add is not, I fear, altogether to our credit—are quicker to find out what the examiners expect them to say, and when they have once found it out they never fail to say it. On the whole, a story told of the late M. Arsène Darmesteter illustrates, I think, pretty well what is generally to be understood by nervousness. When anxious mothers used to come to him, begging him not to be too hard upon their boy at the *baccalauréat*, as the poor fellow was very nervous, he would reply: "In what subject is he nervous, madam?" . . .

#### CONCLUSION.

In conclusion, it seems to me that the utility of the debate at the *doctorat* and of the oral examinations at the *agrégation* is incontestable. The only query that might be raised is whether the lessons and lectures of which I have spoken do not rather tend to form brilliant lecturers than teachers. As for the lower examinations, such as the *brevet supérieur* and *baccalauréat*, if you will excuse my once more referring to personal reminiscences, I will confess that, whatever the examiner may think, it is possible to get high marks at the *viva voce* for subjects of which one knows almost nothing, especially if one has been in the hands of a clever coach.

Yet it would be a pity to suppress the *viva voce*, however little it may mean, because this would inevitably entail a neglect of *viva voce* work in schools; and one of the most interesting sides of educational work in France in the present day is the effort made by teachers—an effort often crowned with success—to teach their boys or girls to express their thoughts verbally in clear, forcible, and even elegant language.

The CHAIRMAN having invited discussion on the subjects raised by Professor Withers and Miss Williams,

Mr. EVE said the *viva voce* part of the French examinations was evidently most successful in the examination of teachers. The real problem was how to conduct such examinations so as to be in touch with the examinees. *Viva voce* tests required special skill on the part of the examiners, and it was often difficult to look over the candidates' written papers prior to the *viva voce* examinations. Mr. Withers had expressed his dislike to set books for examinations. He (Mr. Eve) was at one time opposed to them, but had now come to the conclusion that they formed a valuable part of the examination. He did not

agree that there was no trouble in composing a paper on a set book. He was glad to hear it stated that, in examining on a book or a syllabus, there ought to be a due sense of proportion. When a boy's education was supposed to be complete, they did not want to find out so much what he had been learning, but how he could apply his knowledge; in the intermediate stages, they had not only to ascertain what power he had acquired of applying his knowledge, but also the immediate result of recent teaching.

Mr. BARLET considered that, in the case of modern foreign languages, oral examination was a necessity. A dead language might be learned very well from books; but a modern language had to be spoken in such a way that it could be understood. It was necessary, therefore, that the pronunciation should be studied as well as the grammar. This was not always the case in schools, where too frequently the study was conducted almost entirely by means of translation from and into the foreign language.

Professor SPIERS said oral examinations need not be very long. With regard to nervousness in children, his experience coincided with that of Miss Williams. They mostly seemed cool and collected, especially the girl candidates. It could be seen in a very short space of time how a candidate stood with regard to speaking or pronouncing a foreign language, and the more elementary the examination the quicker it could be got through; so that he hoped the College of Preceptors would not make a difficulty of the number of candidates, but proceed at once to make *viva voce* a necessary part of its examination in modern foreign languages. Set books might be made of great practical use; the great objection to them was that many candidates merely learnt a translation which had been given to them. The important thing was for the student to know some French by heart, and be able to construct sentences on the same material. It was hard to find a common subject which would have words that were fairly easy and known to all; whereas, if a certain passage from a set book were given and adopted, the vocabulary could be taken from that passage, and then the intelligence and the accuracy of the candidate could be easily tested by the examiner making up a piece of translation into the foreign language out of the vocabulary of the set book.

Mr. ORCHARD remarked that an examination, to be effective, should be both written and oral. An examination in French, where there was no test of the pronunciation, could not be regarded as a satisfactory examination. He also was of opinion that the use of set books was to be recommended.

Mr. STORR said the calling of an inspector was one to which a man should devote the best part of his life. He should have served his apprenticeship as a schoolmaster, should have commended himself as an efficient schoolmaster, and should give the rest of his life to the work of inspection. When they saw the sort of men that the system of primary education had produced, and how much they had advanced the general education of the country, he thought that something analogous might be hoped for in secondary education. The sort of men they wanted would not be got from the Universities, where their main work was University teaching, and he hoped that the Board of Education itself would undertake examination and inspection.

Mr. SOUTHEE said it would be very helpful if they could have examiners who had been accustomed to teach. *Viva voce* was a most important part of the work, but its efficiency depended entirely on whether the examiner was in sympathy with the work the pupils had been doing.

Mr. WITHERS, in reply, said he thought there should be a number of inspectors who should do nothing else. But, if the inspectors and examiners could be kept in organic connexion with the teachers, it would be of very great advantage from many points of view. He thought Professor Spiers' suggestion that passages for translation should be founded on set books a very valuable one, and that the test should not be of a kind such as lent itself to memorizing of an unintelligent character.

The CHAIRMAN proposed that a hearty vote of thanks should be passed to Miss Williams and Mr. Withers for their able and suggestive contributions. Miss Williams had presented them with a most lucid and careful statement of the actual working of *viva voce* examinations in France. Mr. Withers had referred to an authority whom they all respected and revered, viz., Edward Thring, whose objection to what he called the dead hand of outside authority coming in and interfering with the life and growth of the real teacher was constantly expressed in all he wrote and said. He could hardly help thinking that Thring took a somewhat exaggerated view in this respect. The truth was that, if all schools in England were conducted like Thring's, inspectors and examiners would not be wanted at all; but for the average man or woman there was no doubt that an outside test was valuable, provided that it was applied under proper conditions. Those conditions were not only that the examiner should possess knowledge of what he was appointed to examine upon, but that he should have tact, and, above all, sympathy. He could not agree with Mr. Withers in thinking that an outside examiner implied an outside syllabus. It did not seem

to him that that was at all necessary. The ideal examination of a secondary school was that the examiner should put himself in communication with the teacher, ascertain the scheme of study adopted, the books used, and the amount of progress that he expected this or that form to have made. He should then get the teacher to conduct a little oral examination, so that he might judge of what was expected of the scholars, and how the examination could best be adapted to the work done in the school. It was not the business of the Government to impose this or that theory of teaching. All originality, all independence, and all enthusiasm would be very seriously interfered with if it were supposed to be the business of the Government to impose its own syllabus and its own codes upon every school; but there were certain general lines which, by universal consent, must be followed in all good schools. The object should be to find out what the schools professed to teach, and then to discover whether that profession was properly carried out, but not to impose upon them a scheme of instruction which they themselves might disapprove. Then with reference to the differences between examination and inspection, it must be remembered that either by itself was inadequate. If they had individual examination only, and then registered the results, and made their estimate of the school entirely dependent upon the number of scholars who passed a number of mechanical tests, their estimate of the school would be an unsatisfactory one. But, if they went to the other extreme and said that because examination had its defects therefore they must rely on inspection only, there was the possibility of very hasty and inaccurate impressions on the part of examiners, who mistook those impressions for a complete estimate of the work of the school. He was quite sure there was far greater danger of a teacher being misunderstood and undervalued if they relied on pure inspection than if they combined inspection with examination. Every system of testing a school had its limitations and defects, but each had also its merits, and the two together seemed to be mutually corrective and helpful. He did not look forward to any successful method of examining schools which did not include some test of the intelligence of the teaching, the brightness of the pupils in responding to questions, and the amount of interest they gave to their work. This could only be tested by inspection, and then the examination would show how far the knowledge had been accurately and thoroughly necessary. Thus it would be seen that both examination and inspection were necessary. In the Indian Civil Service Examination, with which he had been connected for many years, the Commissioners attempted to adapt the examination to the needs of the best schools, and to prevent it from becoming a too narrow or mechanical test. For example, in English literature it was arranged that the examination should be divided into three parts: first there was a general paper dealing with the whole subject, care being taken that it covered a considerable range. The second paper bore on prescribed books for the year, a list of books and an indication of the particular period which would be discussed having been printed beforehand. In the third part of the examination the students were invited to send in a list of the books they had read with most interest to themselves for the *viva voce* examination. By this arrangement a very fair result could be arrived at as to the order of merit in which a student should be classed. In conclusion, he congratulated the meeting on having had a very useful discussion.

A vote of thanks to Sir Joshua Fitch for presiding concluded the proceedings.

## REVIEWS.

MR. CUST'S ETON.

"English Public Schools."—*A History of Eton College.* By Lionel Cust. (Duckworth.)

It is natural enough that the story of Eton should be fuller, and in many respects more picturesque and interesting, than the story of other old English public schools. It was munificently founded, and has been royally nourished; the patronage of the aristocracy, if nothing else, would have filled it with clever and fortunate youths, destined to prominent careers. The sun has shone continuously for Eton; the gods have been good to it, even when they seemed to frown. The Public Schools Commission of 1861 was a blessing in disguise, for the abuses of the old order of things had attracted public attention, and would never have been allowed to go unchecked. Mr. Cust is still in some sort of sentimental sympathy with the past. He passes in review the seven Commissioners on whom the fate of Eton

dedicated—Lord Lyttelton, “with his high sense of moral and religious rectitude”; Sir Stafford Northcote, whom Lord Salisbury described as “eminently cautious,” and Mr. Gladstone as “a man in whom it was the fixed habit of thought to put himself wholly out of view when he had before him the attainment of great public objects”—and then he proceeds to say: “It could hardly be expected that Lord Lyttelton and Sir Stafford Northcote would be strenuous champions of Eton in her hour of need.” The other Commissioners were the Earls of Clarendon and Devon, Dr. W. H. Thompson, Mr. Twisleton, and Mr. Halford Vaughan. “It was before such a tribunal that the Provost, Fellows, and Headmaster of Eton College were bound over to stand up and answer for their sins. Provost Hawtrey felt the situation deeply.” This is almost comical. Considering the general awakening of sleepy minds in the fifties and sixties, and the ominous controversy which had been brought to a head by Sir J. T. Coleridge and Matthew Higgins, the college fared remarkably well at the hands of a sufficiently partial Commission.

The history of the school is the history of its endowments and buildings, of its masters, and of its roll of distinguished boys. The record has been traced often enough already, and the copious works of Maxwell, Lyte, and Benson are so well within the reach of all who need them that a new volume on Eton cannot be looked upon as a manifest need. But, in a series of school histories such as Messrs. Duckworth have undertaken, it was necessary that one volume should be devoted to the ancient foundation of Henry of Windsor, a quaint manuscript portrait of whom embellishes this book. Mr. Cust has recognized the precise nature of his task, and has performed it very well. He goes over the ground in a sufficiently interesting manner, and refers to most of the Old Etonians who have won a place in the history of their country.

#### BISMARCK.

“Heroes of the Nations.” Edited by Evelyn Abbott, M.A.—*Bismarck, and the Foundation of the German Empire.* By James Wycliffe Headlam. (Putnam’s Sons.)

Mr. Headlam’s biography of Bismarck is on many grounds one of the best volumes in the useful series to which it belongs. The writer has not hurried his work, or been content with authorities and information already familiar to English readers. He is considerably indebted to Kohl, whose “Bismarck-Regesten” is indispensable to students of the political and diplomatic career of the first Imperial Chancellor of Germany. Kohl is still, or was until recently, engaged in collecting reminiscences of Bismarck, which he prints in an annual volume—and, of course, the longer he continues to do so the more he will be in danger of picking up what is apocryphal. Mr. Headlam is also indebted to the rather sensational memoirs of the King of Roumania, which Bismarck discredited in general terms, as he and his son after him discredited a great mass of very interesting Bismarckiana. The mercurial Busch falls within this category. Bismarck’s own “Memoirs” have been consulted throughout as the best attainable guide to his character and personal attitude; and Sybel, of course, is indispensable for the facts of Prussian diplomacy during the decade preceding the final unification of Germany.

The evolution of Bismarck from the capable *Junker* into the King’s right-hand man and the creator of an empire is interesting as a study of shrewdness and success. There is no romance about it. Mr. Headlam has told it thoroughly well; but he does not bring the personality of the man any nearer to our hearts and sympathies, for the simple reason that this clever, positive, cynical, and unscrupulous German was not sympathetic, and was never willing to pay the price that it costs to own and maintain a heart. We would not willingly do him an injustice. Here is a pathetic passage from a letter to his wife—undated, but apparently written from Frankfort at about the age of thirty-five:—

Yesterday I was at Wiesbaden, and, with a feeling of melancholy, revisited the scenes of former folly. May it please God to fill with His clear and strong wine this vessel in which the champagne of twenty-one years foamed so uselessly! . . . I do not understand how a man who reflects on himself, and still knows, and will know, nothing of Good, can endure his life for contempt and weariness. I do not know how I endured this in old days; if, as then, I were to live without God, thee, and the children, I do not know why I should not put life aside like a dirty shirt. And yet most of my acquaintances live thus.

Bismarck achieved a brilliant success, partly because he was a skilful intriguer precisely suited to the situation in which he found himself, partly because there was a highly trained army with excellent generals ready to his hand, and partly because educa-

tion and commerce had set Germany on the up-grade of human development at least a generation before he went to school.

Messrs. Putnam have made themselves a name by the admirable illustration of their biographical and historical volumes. We have here five excellent portraits of Bismarck, with many of the chief historical scenes of his life—in all, twenty-seven full-page pictures directly illustrating the text.

#### LOGICAL EDUCATION.

*The Logical Bases of Education.* By J. Welton, M.A. (Macmillan.)

Mr. Ruskin was consciously enough extravagant when he said that “modern ‘education,’ for the most part, signifies giving people the faculty of thinking wrong on every conceivable subject of importance to them.” One must, indeed, speak loud if one is to hope for a hearing. In any case, the evil indicated by Mr. Ruskin may readily be remedied by a careful use of this new volume of Prof. Welton’s.

Mr. Welton has written distinctively well on logic, but we are inclined to think that he has never produced anything better than this succinct and lucid exposition of the application of logical method to educational purposes. After sketching the general nature of knowledge, and setting forth the postulates of knowledge by language. “Doubt has been expressed,” he asserts, “whether the majority of Englishmen ever either say what they mean or mean what they say”—another extravagance which may be permitted for the effect. The judicious teacher will lay to heart Mr. Welton’s remarks and illustrations; though there is hardly any fresh element in them except the setting and the form of presentation. Then we get on to logic, which is “the science which investigates the origin, development, and structure of knowledge.” The treatment, of course, is conditioned by the specific purpose of the work. The old formal logic is very shortly handled; the fruitful principles are found in the modern developments of the science since Mill “grasped the truth that the function of logic is not to dictate method to science, but to accept the methods which science finds successful in the ascertainment of truth, and by analysis to make clear their essential general features.”

Mr. Welton’s illustrations of principle, and of violation of principle, are abundant, fresh, and interesting. There is a certain charm of hopefulness in seeing that even Mill could go wrong in the practice of what he preached; that Mr. Herbert Spencer is capable of perpetrating the logical fallacy of “begging the question” (*petitio principii*, as the learned have it); and that even the astute Mr. Sherlock Holmes can fail to draw the line correctly between observation and inference. By the way, however, that inference of Mr. Holmes is not, after all, so “very unsafe”—for practical purposes. Further, the illustrations are extremely valuable in impressing the importance of logical method in the most various classes of literary work. The last chapter, which expounds the general bearing of logic on education, will be found most suggestive and helpful. The “Exercises in Inference” contribute a valuable (and amusing) appendix. The volume appears in a series of “Manuals for Teachers,” under the general editorship of Mr. Oscar Browning and Dr. S. S. F. Fletcher, of the Cambridge University Day Training College. It will be an admirable series if the rest of the volumes come anywhere near the excellence of this one.

#### ARISTOTLE’S “POETICS.”

*Aristotelis Poetica.* Textum recognovit, emendavit, in ordinem digessit, secundum sententiarum seriem typis distinxit T. G. Tucker. (Nutt.)

This, in plain English, is a new edition of the text of Aristotle’s “Poetics.” Prof. Tucker has so arranged and printed the text as to assist as far as possible the mind of the student by appealing to his eye. It is generally conceded that the treatise, as it has come down to us, is in much disorder; but previous editors have been content in this, as in other cases, to indicate in notes the passages that are out of order, and to enclose in brackets whatever appears to be spurious. Prof. Tucker, however, resorts to distinctive types in the one case, and boldly prints the sections in the order in which they should apparently be read. In many other ways he employs the devices of the printer’s art to make the meaning clear—by spacing, indenting, renumbering the sections in accordance with the sense, and so forth. It appears to us that the ingenious system here adopted might advantageously be applied to other difficult authors; and we feel sure that Prof. Tucker’s arrangement of the text will lighten the labours of the reader.

The editor has introduced a number of emendations which are often ingenious; a few are very good, but several of them seem to us to err on the side of boldness. But an editor who prints his own conjectures in the text throws down the gauntlet to all other scholars, *urbi et orbi*, and, truth to tell, they are generally all eagerness to pick it up. In this respect Prof. Tucker is a provocative editor; but we shall sternly repress the temptation to enter into the lists against him. All we would say is that any one who reads the "Poetics" with this text and Prof. Butcher's edition will be thoroughly equipped for the task of discerning and mastering the treatise. It is almost needless to add that Prof. Tucker has largely availed himself of Prof. Bywater's admirable text.

#### A GREEK HISTORY OF ROME.

*The Roman History of Appian of Alexandria.* Translated from the Greek by Horace White, M.A., LL.D. In 2 vols. (Bell & Son.)

Appian has not been translated since 1679, and that translation was not often reprinted; so that Dr. White has broken almost virgin soil in this easy English version of a Greek text so well known to historians and scholars. Appian was, in many senses, a thoroughly competent historian. A Greek colonist in Egypt, an advocate in Alexandria, and probably procurator before he came to practise in the Imperial Courts at Rome, he soon earned distinction in the capital. He was befriended by Fronto, the tutor of Marcus Aurelius, and one of Fronto's letters was addressed to Antoninus Pius, asking for the appointment of Appian as procurator as a mark of distinction in his old age. The appointment was made, and it was after this that Appian wrote, or, at any rate, completed, his voluminous history.

Appian is concise in style, often rhetorical, occasionally grand. He is a narrator, not a philosopher, and in his narration, very naturally, he makes occasional little slips, on which modern criticism is severe. His history of Rome, and especially of fighting Rome, is a very good compilation, and he could not possibly be expected to be minutely accurate in all his details. He writes a fluent account, which gives one a very good idea of the consecutive events of the Roman people, without much attempt to pick out causes and effects, or to show how the State or the *imperia* were built up. In this account there is a great deal which is interesting. Where there is no time or appetite for more comprehensive and elaborate histories, and where a concise and partly contemporary story is desired, carrying us from the origin of Rome to the second century after Christ, we cannot do better than recommend Dr. White's sufficiently faithful and facile translation of Appian. These volumes are illustrated by maps, busts, reproductions of Vatican manuscripts, and other aids to the text.

## GENERAL NOTICES.

### CLASSICS.

*Hannibal's First Campaign in Italy (Livy XXI. 39-59)*, edited by F. E. A. Trayer (Bell), is a volume of the excellent series of "Illustrated Classics" which help so much to give reality to classical work. The introduction is short and interesting. Perhaps the section on the characteristics of Livy would meet the wants of schoolboys better if it were a little extended and arranged in numbered paragraphs. There are chapters on Taine's "Tite Live," which, though not actually numbered, suggest such treatment. We are glad to see a reference to Philemon Holland's delightful translation. Its racy style will often supply a teacher with capital renderings; while its differences suggest points easily overlooked. Mr. Trayer's notes are scholarly and meet all real difficulties, both of construction and of subject-matter. In the preface it is stated that attention has been drawn to points of both style and idiom with a view to composition. This might, in places, have been done more explicitly. For example, in the excellent note on *dolor injuria indignitas* (XLIV. 4), it might have been worth while to add, in so many words, that the use of words like *injuria* to mean "a sense of injustice" is a very useful "tip" in writing Latin prose. Again, apropos of *ut quaeque iis impeditiora erant* (LVII. 5), a hint that this would be the idiomatic rendering of the English "on difficult ground" would not be out of place.

*Caesars's Gallic War, Book III.*, edited by F. H. Colson and G. M. Gwyther (Bell), is another volume of the same series. The notes are of a somewhat more elementary description. They are clear and to the point. The introduction is well put together, and contains no superfluous matter. For example, there is no attempt to write a life

of Caesar; but some of his chief characteristics are given under distinct heads with definite illustrations, avoiding the vagueness and verbiage which are so apt to disfigure such descriptions. It is supplemented by Mr. Liddell's account of the Roman Army, which has appeared in other volumes of the series.

### SCIENCE.

(1) *Introduction to Physical Chemistry.* By J. Walker, D.Sc., Ph.D. (Macmillan.) (2) *A Text-Book of Physical Chemistry.* By Prof. R. A. Lehfeldt. (Arnold.)

During the last twelve years or so physical chemistry, from a mere appendage of ordinary chemistry, has grown into a great volume of knowledge, claiming a right to be considered a science in itself. The pioneers of this new science, Ostwald and Van't Hoff, have published extensive treatises which have been translated to a large extent into English. But, for the student who does not intend to devote himself to the science, some smaller and more introductory work was needed. This want is now supplied by the two works before us. Both authors have previously qualified for their task by acting as translators of certain of the works above referred to, as well as being themselves investigators and teachers in the subject. The arrangement of the two books is somewhat different, and Prof. Walker's is more extensive in its subject-matter, taking the Periodic Law, for instance, not included in Prof. Lehfeldt's book. The laws of solution, osmotic pressure, &c., are equally treated in both.

*Inorganic Chemistry for Advanced Students.* By Sir Henry Roscoe, F.R.S., &c., and Arthur Harden, Ph.D., &c. (Macmillan.)

This book strikes one at once as essentially a new edition of the senior author's "Elementary Lessons" of our school-days, and starts a train of reflections on the changing use of the terms "advanced" and "elementary." One of the characteristic features it retains is the interweaving of the general with the descriptive portions of the subject. Thus a chapter on Equivalents follows the description of the halogens; atomic heat and crystallization are discussed between the nitrogen group and the alkali-metals; and so forth. In fact, the book is designed to present a definite course of study rather than as a systematic treatise chiefly to be used for reference. This is borne out by a new feature—the giving of directions for laboratory experiments, each in its appropriate place; though the instructions are less detailed than they would be in an elementary book.

*Elements of Natural Philosophy.* By Alfred Earl, M.A. (Arnold.)

Under this somewhat old-fashioned title we find a quite modern work on the elements of mechanics, physics, and chemistry. The measurement of quantities of matter, space, and time and their relations; the chief kinds of physical and chemical change; common chemical elements and compounds; the meaning of energy; equilibrium, inertia, vibration, sound and light—these form the subject-matter, illustrated by experiments and mathematical exercises.

*Elementary Practical Physics.* By Henry Stroud, M.A., D.Sc. (Methuen.)

This will be a useful manual for a physical laboratory, as it contains instructions for the use of the usual instruments and methods for measuring length, area, volume, mass, density, time, &c.; experimental illustrations of the balancing of forces, the barometer, and Boyle's law; and elementary experiments on heat, light, sound, magnetism, and electricity, all requiring only very simple and readily constructed apparatus.

*Heat for Advanced Students.* By E. Edser. (Macmillan.)

This work bears on every page the stamp of the practical teacher. It leads the student from the elementary, though not altogether simple, subjects of thermometry and expansion to the laws of thermodynamics and their far-reaching results, both practical and theoretical. Due consideration is given to the historical development of the science, and descriptions of some of the very latest experimental results are to be found here. There are detailed instructions for laboratory experiments, each in its proper place, as well as descriptions, and, in some cases, photographs of the apparatus by which classical experiments have been carried out. There are plenty of good illustrations.

*Magnetism and Electricity for Beginners.* By H. E. Hadley. (Macmillan.)

This work well maintains the high standard of the series to which it belongs. The usual order of treatment is followed—magnetism, statical electricity, voltaic electricity. Instructions for a hundred and seventy-six experiments are given, and the book is abundantly illustrated.

*Magnetism and Electricity.* By J. Paley Yorke. (Arnold.)

The subsidiary title of this book is: "An Elementary Treatise for Junior Students; Descriptive and Experimental." To the last word we must take objection, since no precise instructions are given for the carrying out of experiments. Apart from this deficiency, the importance of which will depend entirely on the circumstances under which the book is used, the book is a good one. Some originality is shown in the order of treatment, electrostatics being taken last.

- (1) *Practical Chemistry* (First Year and Second Year). By H. Hills, B.Sc., B.A. (Philip.) (2) *Practical Physics* (First Year and Second Year.) By H. Hills, B.Sc., B.A. (Philip.)

These contain lists of laboratory experiments and corresponding lecture-headings, intended to be cut out and pasted as headings in the student's note-book. The arrangement of the course is good.

*Animal Biology.* By C. Lloyd Morgan, F.R.S. Third Edition. (Longmans.)

This excellent introduction to zoology reappears with considerable alterations, partly such as are required by recent alterations in the syllabus for the Intermediate Science Examination of London University, partly new diagrams and the usual other improvements of a new edition. In its new form it can be safely recommended to candidates at the examination in question as an eminently readable and trustworthy guide. There is a useful glossary of biological terms at the end.

#### MODERN LANGUAGES.

*Petite Esquisse de la Littérature Française.* By J. E. Mansion. (McDougal's Educational Co.)

The object of the author is to furnish, for higher classes, a French reading book on French literature. Considering the difficulty of condensing such a vast subject within the limits of a hundred and fifty pages, he has succeeded fairly, and a teacher well acquainted with his subject might utilize the book with advantage. But it errs in attempting too much; unnecessary biographical details are often given, and the notices of many authors are too concise to convey an adequate idea of them. The description of the quarrel about "Le Cid" may be cited as distinctly interesting, and so may the notices of Boileau and Montesquieu. On the other hand, Victor Hugo is inadequately treated, and the account of the romantic movement wants a good deal of expansion. A series of essays in which less knowledge was taken for granted would, it seems to us, have carried out the author's idea better. The real object of a school book on literature is rather to show in some detail how a judgment on a few authors may be formed than to summarize cut-and-dried verdicts on a great many.

*My First French Book.* By M. Ninet. (Blackie.)

This is a collection of little talks about cats, canaries, rabbits, naughty boys, and the like, written in simple language with plenty of pictures. By covering up the letterpress they might be also utilized for simple conversations. For that purpose it would have been better to arrange the pictures and the reading on opposite pages.

*Les Ailes de Courage,* by G. Sand, adapted and edited by B. Proper (Blackie), is a pretty little story, not too long for a couple of terms' reading. It has a vocabulary and notes. Some of the notes, which are not numerous, are suggestive, but most of them are mere translations.

#### MISCELLANEOUS.

"Handbooks of English Literature." Edited by Prof. Hales.—*The Age of Johnson.* By Thomas Seccombe. (Bell & Sons.)

Mr. Seccombe has had assigned to him the fifty years from 1748 to 1798, and reviews, with Johnson as his central figure, the late half of our eighteenth-century literature. Within this period, mainly of classical or buckram prose, he has to deal with many artists who have left their quality well impressed on our minds; but we doubt if it can be fairly said to include "more great names in our literature than any other 'Age' included in this series." Amongst its essayists and critics we have Johnson himself, Goldsmith, and the Warton; amongst writers of letters and memoirs, Chesterfield, Walpole, and Boswell; amongst political writers and economists, Burke, Adam Smith, and Arthur Young; amongst theologians, Paley, Priestley, and the Wesleys; amongst historians, Hume, Robertson, and Gibbon; amongst novelists, Richardson, Fielding, Smollett, and Sterne; amongst dramatists, Colman, Goldsmith, and Sheridan; amongst poets, one or two already mentioned, but no great names until we come upon Burns. The scope is wide, but the output is hardly more brilliant than that of the times of Elizabeth, the later Georges, and Victoria. Apart from that Mr. Seccombe has given us a very readable estimate of the time.

*Missionary Travels and Researches in South Africa.* By David Livingstone. (Ward, Lock, & Co.)

There will always be plenty of interest in Livingstone's story of his sixteen years' residence in the interior of Africa. This handy reprint should make a large number of young folk acquainted with a book, in some sense a classic, which delighted their parents on its first publication. It is full of characteristic sketches from the banks of the Congo, Zambesi, Limpopo, and the Equatorial lakes. Incidentally, Livingstone draws a very poor character of the Boers, of their "oppression," "suspicion," "cruelty," and "cowardice." But he bears witness to their ingenuity:—"No winter passes without one or two tribes in the East country being plundered of both cattle and children by the Boers. The plan pursued is the following: One or two friendly tribes are forced to accompany a party of mounted Boers, and these expeditions can only be got up in the winter, when horses may be used without danger of being lost by disease. When they reach the tribe to be attacked, the friendly natives are ranged in front, to form, as they

say, a 'shield'; the Boers then coolly fire over their heads, till the devoted people flee, and leave cattle, wives, and children to the captors. This was done in nine cases during my residence in the interior, and on no occasion was a drop of Boer's blood shed."

"British Anthologies." Edited by Prof. Edward Arber.—*The Spenser Anthology* (1548-1591). Edited by Prof. Arber. (Frowde.)

Some fifty poets are illustrated in this acceptable volume of Elizabethan poetry. The selection is liberal in spirit and quantity, the pica type is excellent for reading, and altogether the volume is very handy and attractive.

*Specimens of English Prose, from Malory to Carlyle.* Selected by Bertha M. Skeat, Ph.D. (Blackie.)

This book is intended, and very well adapted, for school use. It is a selection of passages for the illustration of literary history, and for study rather than simple delectation. The pieces are introduced by descriptions of the works laid under tribute; there are occasional footnotes, and each passage is followed by "points to note in style." The specimens are interesting, and the book will be found very useful.

*A First Sketch of English History.* By E. J. Mathew, M.A. (Macmillan.)

We noticed some time ago a small historical text-book by Prof. Mathew, of New Zealand. The present volume is a combination of three parts, printed at different times, and now bound together with their original paginations. Mr. Mathew is guided mainly by the evolution of constitutional history, but he has wisely lightened his text by introducing a brief narrative of public events.

*Jesus, the Carpenter of Nazareth.* By Robert Bird. (Nelson.)

Mr. Bird has written a graphic life of Jesus, in short and simple sentences, for the youngest children. "Two points are dwelt on which are common to all the Churches—the beauty of the life of Jesus and the personal contact of the Spirit; beyond that lie the dividing walls of creeds and dogmas." The book is imposing in size and full of pictures. It seems to be conceived in an excellent spirit, and has been produced with much taste and judgment.

*Mark Hamilton's Daughters.* By A. Fraser Robertson. (Nelson.)

A pretty, pathetic, melancholy story of a daughter's devotion—good for grown-up readers, especially for young women with a hard lot in life. A novel as safe as the true lessons of life can make it.

*The Children's Hour.* By Mrs. Molesworth. (Nelson.)

This is a very charming story of children for children; full of childish incidents, natural vignettes, pet animals and toys, transient laughs and tears. There are dozens of pictures, some coloured, others in black and white.

### ADJOURNED MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

An adjourned meeting of the Council was held at the College on January 20. Present: Rev. J. Stewart in the Chair; Mr. Barlet, Mr. Baumann, Rev. J. O. Bevan, Mr. Bidlake, Mr. Brown, Mr. Butler, Mr. Charles, Miss Day, Mr. Eve, Mr. Harris, Mr. Leatham, Mr. Millar-Inglis, Mr. Pinches, Mr. Sergeant, and Dr. Wormell.

Diplomas were awarded to the successful candidates at the Christmas Examination of Teachers, as follows:—

#### Fellowship:

Miss R. Crump. E. Garnett.

#### Licentiatehip:

W. M. Daniels. Miss E. M. Harrison. W. H. Payne.  
B. Dumville. R. P. Jones.  
J. H. Fudge. W. Mattison.

#### Associateship:

P. H. Arch.	G. W. Doibel.	T. P. Oakley.
C. E. Arnold.	Miss A. Douglas.	G. C. Oldfield.
T. R. Baldwin.	J. Downes.	Miss E. J. Overton.

**MATHEMATICS.**

**4086.** (A. RENSRAW.)—If AC be the chord of a heptagon inscribed in a circle, diameter AB (= 2r), and AB be taken as the axis of x, and a line at right angles to it through A as that of y, then, if (x', y') be the coordinates of C, prove that

$$\frac{2y'(2x'-r)\{x'(x'-r)-y'^2\}}{\{x'(x'-r)-y'^2\}^2-y'^2(2x'-r)^2} = \frac{x'}{y'}$$

*Solution by Professor SANJANA, M.A.*

Let A be joined to any one of the remaining vertices, C, of the heptagon; let  $\angle BAC = \theta$ . Then

$$\theta = \frac{1}{7}\pi \text{ or } \frac{3}{7}\pi \text{ or } \frac{5}{7}\pi;$$

also  $AC = 2r \cos \theta$ ,

$$x' = 2r \cos^2 \theta, \quad y' = 2r \cos \theta \sin \theta.$$

Hence, the given left side

$$\begin{aligned} & \frac{2r \sin 2\theta (r + 2r \cos 2\theta) \{r(1 + \cos 2\theta) r \cos 2\theta - r^2 \sin^2 2\theta\}}{\{r(1 + \cos 2\theta) r \cos 2\theta - r^2 \sin^2 2\theta\}^2 - r^2 \sin^2 2\theta (r + 2r \cos 2\theta)^2} \\ &= \frac{2 \sin 2\theta (1 + 2 \cos 2\theta)(\cos 2\theta + \cos 4\theta)}{(\cos 2\theta + \cos 4\theta)^2 - \sin^2 2\theta (1 + 2 \cos 2\theta)^2} \\ &= \frac{2 (\sin 2\theta + \sin 4\theta)(\cos 2\theta + \cos 4\theta)}{(\cos 2\theta + \cos 4\theta)^2 - (\sin 2\theta + \sin 4\theta)^2} \\ &= \frac{8 \sin 3\theta \cos \theta \cos 3\theta \cos \theta}{4 \cos^2 3\theta \cos^2 \theta - 4 \sin^2 3\theta \cos^2 \theta} = \frac{2 \sin 3\theta \cos 3\theta}{\cos^2 3\theta - \sin^2 3\theta} = \tan 6\theta \\ &= \tan (\frac{3}{2}\pi - \theta), \text{ in all three cases,} \\ &= \cot \theta = x'/y'. \end{aligned}$$

This example is quoted in Vol. LXIX., at p. 125, where, I believe, two mistakes occur in the left-side expression. For all regular polygons this expression is  $\tan 6\theta$ ; and for the heptagon  $\tan 6\theta$  is  $\cot \theta$ .

[Mr. DAVIS agrees with Professor SANJANA's emendation of the question. Since

$$\sin \theta = y'/AC, \quad \cos \theta = x'/AC, \quad \sin 2\theta = y'/OC, \quad \cos 2\theta = (x'-r)/AC;$$

therefore  $\tan 3\theta = y'(2x'-r)/\{x'(x'-r)-y'^2\}$  and  $\tan 6\theta$  as above.]

**14365.** (Professor COCHEZ.)—Lieu des foyers des hyperboles tangentes à l'origine à l'axe des x et ayant une asymptote perpendiculaire à l'axe des x.

*Solution by R. P. PARANJPYE, B.A.*

Let OA = a, when AB is the asymptote perpendicular axis of x. If S be the focus in this position, the coordinates being  $\xi, \eta$ , we express the condition that

$$\angle OSA = \angle ASD,$$

or its supplement, since AO and AB are the two tangents from A.

On making some easy reductions, we see

$$\eta^2 a = \pm (a - \xi) \{ (a - \xi)^2 - \eta^2 \}.$$

There is no other condition to be satisfied. Hence there is no locus as required, for we can take any point as focus and describe an hyperbola (there are, in fact, two for each point) satisfying the given conditions.

*A New Proof that the Medians of a Triangle are Concurrent.*

*By J. W. SHARPE, M.A.*

Let ABC be a triangle. Bisect AB, AC in F, E; and AF in G. Join BE, CF, EG, and let BE meet CF in O. Then EG is parallel to CF, and GF is one-third of GB; therefore EO is one-third of EB; and the theorem follows at once.

*Notes.*—If EF and OG be joined, the proof can be arranged as follows:—

Since EG is parallel to OF,

$$\triangle OFE = \triangle OFG,$$

and therefore is one-half of  $\triangle OFB$ : therefore EO is half OB.

**14382.** (I. ARNOLD.)—Given the three right lines joining the vertices of equilateral triangles described externally on the sides of any plane triangle, to construct the triangle.

*Solutions (1) by the PROPOSER; (2) by C. JOSS, M.A.*

(1) Construct the triangle DEF having the sides equal to the given lines. On DE, DF describe segments each containing an angle equal to  $120^\circ$ .

Let the arcs intersect in O; join DO, EO, FO. Bisect these in L, M, N; and through these points draw perpendiculars to DO, FO, EO, thus forming the triangle PQR. Bisect PQ, PR, QR in G, H, K; draw GH, GK, HK, and produce EO, FO, DO to meet them in S, T, V. From ES, FT, DV produced cut off  $TA = TO$ ,  $SB = SO$ ,  $VC = VO$ ; draw AB, BC, CA: then is ABC the triangle required.

It is evident from the construction that the six angles AOD, DOB, BOF, FOC, COE, EOA are equal; and therefore each of them is one-sixth of four right angles, or two-thirds of a right angle. Also since PQ and PR are bisected in G and H, then GH is parallel to Q, R, and therefore perpendicular to BE; similarly GK is perpendicular to AF, and HK to CD.

[The rest in Vol.]

**14376.** (A. F. VAN DER HEYDEN, B.A.)—If I be the incentre,  $I_1, I_2, I_3$  the excentres, and O the circumcentre of a triangle ABC, and if  $o_1, o_2, o_3$  are the circumcentres of the triangles  $I_1I_2I_3, I_1I_2I_1, I_1I_2I_3$  respectively, then o, I, O are respectively the orthocentre, circumcentre, and nine-point-centre of the triangle  $o_1o_2o_3$ , and the circle ABC touches the inscribed and escribed circles of this triangle.

*Solution by LIONEL E. REAY, B.A.; R. P. PARANJPYE, B.A.; and many others.*

ABC being the nine-point-circle of each of the triangles  $I_1I_2I_3$ , &c., the circumradius of each

$= R = o_3I = o_1I = o_1I_2 = o_3I_2$ ; therefore  $o_1o_2$  is bisected at right angles by  $I_1I_2$  at point  $T_2$ . So for  $o_2o_3, o_3o_1$ ; therefore I is circumcentre of  $o_1o_2o_3$ . Also the circle ABC passes through  $T_1, T_2, T_3$ , the mid-points of the sides of  $o_1o_2o_3$ : therefore it is the nine-point circle of  $o_1o_2o_3$ ; and therefore O is the nine-point centre, and ABC touches the inscribed and escribed circles of  $o_1o_2o_3$  (FEUERBACH'S theorem). Again,  $I_1I_2$  and  $o_1o_2$  are parallel, since they are both perpendicular to  $I_1I_3$ ; therefore  $oo_3$  is perpendicular to  $o_1o_2$ ; therefore o is orthocentre of  $o_1o_2o_3$ .

**14281.** (J. A. THIRD, M.A.)—If a conic touch the sides BC, CA, AB of a triangle at X, Y, Z, and another conic touch the sides YZ, ZX, XY of XYZ at P, Q, R respectively, then AP, BQ, CR are concurrent.

*Solution by Professor SANJANA, M.A.*

Take XYZ as the triangle of reference. Let the equation of the circumconic be  $S_1 \equiv l/a + m/b + n/\gamma = 0$ ; that of the inconic

$$S_2 \equiv L^2a^2 + M^2b^2 + N^2\gamma^2 - 2MNB\gamma - 2NL\gamma a - 2LMa\beta = 0.$$

The tangent YA is  $\gamma/n + a/l = 0$ , and ZA is  $a/l + \beta/m = 0$ ; hence for A  $a/l = -\beta/m = -\gamma/n$ . The conic  $S_2$  is touched by YZ at the point P, for which  $a = 0, \beta/N = \gamma/M$ . Thus the equation of AP is

$$a(Mm - Nn) + l(M\beta - N\gamma) = 0.$$

Similarly, BQ, CR are given by

$$\beta(Nn - Ll) + m(N\gamma - La) = 0, \quad \gamma(Ll - Mm) + n(La - M\beta) = 0.$$

With ordinary working it will be found that these lines concur in the point

$$a/l \{ l(Mm + Nn - Ll) \} = \beta/\{ m(Nn + Ll - Mm) \} = \gamma/\{ n(Ll + Mm - Nn) \}.$$

**14327.** (ROBERT W. D. CHRISTIE).—Investigate the easiest method of securing (1) the first primitive root of a prime, and (2) all the rest.

*E.g.*, prime = 29; first root 2; ∴ 2<sup>3</sup> = 8; ∴ 8<sup>3</sup> = 19, 19<sup>3</sup> = 15, &c.,  
or  
2. 3. 8. 27. 21. 26 × 5  
10. 15. 11. 19. 18. 14 × 6.

*Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.*

GAUSS's method of finding a primitive root is given in MATHEWS's *Theory of Numbers*, Pt. I., 1892, Art. 20. It is direct, but certainly very laborious, as it involves computing every term of the complete period of each of the trial roots *a*, *b*, *c*, &c., until a primitive root *g* is obtained. It may be much curtailed by testing each trial root *a*, *b*, *c*, &c., as to its being a primitive root or not, before undertaking the labour of computing every term of its complete period. This may be done in a series of tests; if, at any step, a trial root is found to be non-primitive. The steps are described as used for the first trial root *a*.

(1) Apply the known simple rules as to whether *a* is a 2-ic residue or not.

(2) When *p* = 6*w* + 1, apply the known simple rules as to whether *a* is a 3-ic residue or not.

(3) If *a* proves to be a 2-ic non-residue, and also a 3-ic non-residue (when *p* = 3*w* + 1), next compute the least residues of *a*<sup>*f*</sup> (mod *p*) for every exponent *f* which is a sub-multiple of (*p* - 1), beginning with the lowest value of *f*. If any such value of *f* < (*p* - 1) gives *a*<sup>*f*</sup> ≡ 1, then *a* is a non-primitive root; but, if no such value of *f* < (*p* - 1) gives *a*<sup>*f*</sup> ≡ 1, then *a* is a primitive root.

[The rest in Volume.]

**14229.** (PROFESSOR UMES CHANDRA GHOSH).—If the LEMOINE's circle of a triangle ABC cuts its sides AB, BC, and CA in F, F'; D, D'; and E, E' respectively, and if the points of intersection of the symmedians AK, BK, and CK of the triangle ABC with FE', F'D, and ED' be A<sub>1</sub>, B<sub>1</sub>, C<sub>1</sub>, show that the centre of the LEMOINE's circle of the triangle A<sub>1</sub>B<sub>1</sub>C<sub>1</sub> is the middle point of the line joining the symmedian point of the triangle ABC and the centre of its LEMOINE's circle. If triangles A<sub>2</sub>B<sub>2</sub>C<sub>2</sub>, A<sub>3</sub>B<sub>3</sub>C<sub>3</sub>, A<sub>4</sub>B<sub>4</sub>C<sub>4</sub>, ..., A<sub>*n*</sub>B<sub>*n*</sub>C<sub>*n*</sub> be formed in the same way as A<sub>1</sub>B<sub>1</sub>C<sub>1</sub>, and if O<sub>1</sub>, O<sub>2</sub>, O<sub>3</sub>, ..., O<sub>*n*</sub> be the centres of the LEMOINE's circles of these triangles, prove that O<sub>*n*</sub>K = 1/(2<sup>*n*</sup>) · OK.

*Solution by Rev. J. CULLEN.*

Since FE', F'D, and ED' are anti-parallel, A<sub>1</sub>B<sub>1</sub>C<sub>1</sub> are their mid-points, so that B<sub>1</sub>C<sub>1</sub> is parallel to BC; hence the triangle A<sub>1</sub>B<sub>1</sub>C<sub>1</sub> is homothetic with ABC (K being the homothetic centre). Also DF' = *abc*/*k*, DD' = *a*<sup>2</sup>/*k*, where *k* = *a*<sup>2</sup> + *b*<sup>2</sup> + *c*<sup>2</sup>. Therefore

$$B_1C_1 = (a^2 + abc \cos A) / k = \frac{1}{2}a;$$

whence the modulus of similarity of A<sub>1</sub>B<sub>1</sub>C<sub>1</sub> = 1/2, so that the circumcentre of A<sub>1</sub>B<sub>1</sub>C<sub>1</sub> is the centre of the LEMOINE circle of ABC; therefore O<sub>1</sub>K = (1/2<sup>2</sup>) OK. Similarly, for A<sub>2</sub>B<sub>2</sub>C<sub>2</sub>, &c.

[Mr. G. N. BATES solves the Question as follows:—Here A<sub>1</sub>, &c., are the mid-points of KA, KB, KC, and the circumcentre of A<sub>1</sub>B<sub>1</sub>C<sub>1</sub> coincides with centre of triplicate ratio circle of ABC, and is therefore at mid-point of OK (see Quest. 14110); therefore, if O<sub>1</sub> be centre of triplicate ratio circle of A<sub>1</sub>B<sub>1</sub>C<sub>1</sub>, O<sub>1</sub>K = 1/2 OK, and therefore O<sub>*n*</sub>K = (1/2<sup>*n*</sup>) OK.]

**6222.** (PROFESSOR CROFTON, F.R.S.).—A heavy particle rests on the summit of a smooth circle; if it be allowed to slide down the circle, show that the parabola which it describes on leaving the circle has double contact with the circle.

*Solution by F. H. PEACHELL, B.A.*

Let P be the point where the particle leaves the circle.

It is easy to prove that P is at a vertical distance = 1/3 radius below A. Call the radius *a*. The velocity of the particle at P = √{1/3(2*ag*)}.

Let ∠TPX = *α*;

then cos *α* = 2/3,

$$\sin \alpha = \frac{1}{3}\sqrt{5},$$

$$\tan \alpha = \frac{1}{2}\sqrt{5}.$$

Take PX, PY as axes of coordinates. Then position of the particle, after a time *t*, is given by

$$y = -(u \sin \alpha \cdot t + \frac{1}{2}gt^2), \quad x = u \cos \alpha \cdot t;$$

therefore, eliminating *t*, we get  $y = -\left\{ x \tan \alpha + \frac{1}{2} \frac{gx^2}{u^2 \cos^2 \alpha} \right\}$ .

This reduces to  $27x^2 + 8\sqrt{5}ax + 16ay = 0$ .

Tangent at origin is  $\sqrt{5}x + 2y = 0$ .

Equation of a conic having contact of second order with the parabola is

$$27x^2 + 8\sqrt{5}ax + 16ay - \lambda(\sqrt{5}x + 2y)(y - mx) = 0.$$

If this is a circle, we get  $\lambda = -6$ ,  $m = \frac{1}{2}\sqrt{5}$ .

The equation then becomes  $x^2 + y^2 + \frac{1}{2}(2\sqrt{5})ax + \frac{1}{2}ay = 0$ , which is the equation of the given circle. Thus the circle osculates the parabola at the origin.

[Mr. J. H. TAYLOR, M.A., refers to SALMON's *Conic Sections* (1862), pp. 210-212, and says, "It is evident that Dr. SALMON would have called the Question 'a contact of the second order,' not a 'double contact.'"]

**5916.** (EDWYN ANTHONY, M.A.).—Show that, for all positive integral values of *n* except unity, 2*n*! is less than {*n*(*n* + 1)}<sup>*n*</sup>.

*Solution by H. W. CURJEL, M.A.; ROBERT BRYANT, D.Sc.; and many others.*

Since the geometric mean is greater than the arithmetic mean, if *n* > 1, then {1.3.5... (2*n* - 1)}<sup>1/*n*</sup> < *n* and (2.4.6... 2*n*)<sup>1/*n*</sup> < *n* + 1; therefore

$$2n! < \{n(n+1)\}^n.$$

**6330.** (H. MACCOLL, B.A.).—The chances of two causes X and Y are respectively .1 and .2. The chance that, if the cause X present itself, an event Z will accompany it, whether as a consequence of the cause or not, is .6; and the chance that, if the cause Y present itself, the event Z will accompany it, whether as a consequence or not, is .7. Moreover, the event Z cannot appear in the absence of both the causes X and Y. On the assumption that X and Y are independent, and that Z is more probable when X and Y both occur than when only one of them occurs, show that the chance of the event Z lies between .18 and .186. [This result does not agree with BOOLE's (see *Laws of Thought*, p. 321, especially the foot-note), whose formula would give .190697... for the exact chance.]

*Solution by the PROPOSER.*

Denoting the data by the symbol  $\epsilon$ , and employing generally the probability notation already explained in the *Educational Times*, and elsewhere, we have

$$\epsilon : \left(\frac{x}{\epsilon} - \frac{1}{10}\right) \left(\frac{y}{\epsilon} - \frac{2}{10}\right) \left(\frac{z}{\epsilon} - \frac{6}{10}\right) \left(\frac{z}{y} - \frac{7}{10}\right) (z : x + y) \times \left(\frac{x}{xy} > \frac{x}{x}\right) \left(\frac{z}{xy} > \frac{z}{y}\right) \left(\delta \frac{x}{y} = 0\right)$$

in which *x*, *y*, *z* are statements respectively asserting the occurrence of the causes X and Y and the event Z. From the fifth factor of the above data, we get  $z = z(x + y) = zx + zy$ ;

therefore

$$\frac{z}{\epsilon} = \frac{zx}{\epsilon} + \frac{zy}{\epsilon} - \frac{zx \cdot zy}{\epsilon} = \frac{zx}{\epsilon} + \frac{zy}{\epsilon} - \frac{z \cdot xy}{\epsilon} \\ = \frac{x}{\epsilon} \cdot \frac{z}{x} + \frac{y}{\epsilon} \cdot \frac{z}{y} - \frac{z}{xy} \cdot \frac{xy}{\epsilon} = \frac{1}{10} \cdot \frac{6}{10} + \frac{2}{10} \cdot \frac{7}{10} - \frac{1}{10} \cdot \frac{2}{10} \cdot \frac{z}{xy} \\ = \frac{20}{100} - \frac{2}{100} \cdot \frac{z}{xy};$$

for  $\frac{zx}{\epsilon} = \frac{1}{10} \cdot \frac{2}{10}$ , since  $\delta \frac{x}{y} = 0$ .

But, from our fourth and seventh data,  $\frac{z}{xy}$  lies between 1 and 7/10. Hence  $\frac{z}{\epsilon}$  lies between .18 and .186.

[The rest in Volume.]

**13483.** (P. W. FLOOD).—Given the base and vertical angle, to construct the triangle geometrically so that the rectangle of the sides shall have a given ratio to the square of a line drawn from the vertex to a point in the base.

*Solution by the late MORGAN BRIERLEY.*

The base AB and the vertical angle ACB being given, the diameter DH of the circumcircle is given. Divide DH in I, so that DH : DI = the given ratio of AC · BC : CK<sup>2</sup>, CK being the required line drawn from the vertex to the base.

On HI describe a circle, cutting the base in K, through which point draw the line HKC to meet the circumcircle in C. ACB will be the required triangle.

By similar triangles,

$$HD : DI :: HC : KC,$$

$$\text{and } HC \cdot KC = \{HK \cdot KC + KC^2\} \\ = AC \cdot BC;$$

∴ AC · BC : CK<sup>2</sup> = HC · KC = DH : DI = the given ratio.

QUESTIONS FOR SOLUTION.

**14450.** (Professor G. B. MATHEWS, F.R.S.)—When  $n$  is an indefinitely large positive integer, every point of the curve  $r = a \{1 + (1/n) \sin n\theta\}$  is indefinitely near the circle  $r = a$ . Prove, by elementary considerations, that, notwithstanding this, the limit of the perimeter of the curve certainly exceeds  $2a\sqrt{\pi^2 + 4}$  [its exact value is  $4a\sqrt{2E_1(1/\sqrt{2})}$ ]. Show also that, under the same circumstances, the limit of the perimeter of  $r = a \{1 + (1/n) \sin n^2\theta\}$  is infinite.

provided each side of the equation represents a determinate quantity. Deduce the values of

$$\int_{-\infty}^{\infty} \frac{dx}{\cosh(x-a) \cosh(x-b)}, \quad \rho \int_{-\infty}^{\infty} \frac{dx}{\sinh(x-a) \sinh(x-b)}$$

**14468.** (R. P. PARANJPE, B.A.)—Show that, if  $xyz$  be the rectangular Cartesian, and  $r, \theta, \phi$  the polar coordinates of a point, and  $x, y, z, r$  be integers, then the product  $xyzr$  is a multiple of 7,200, provided  $\theta$  and  $\phi$  have commensurable trigonometrical ratios. [N.B.—The last condition is necessary; otherwise the question is not true, e.g.,  $2^2 + 2^2 + 1^2 = 3^2$ , but  $2.2.1.3 = 12$ .] (This is a generalization of Quest. 14367.)

**14469.** (H. MACCOLL, B.A.)—Professor SAVAGE'S Quest. 14394 has suggested the following:—Given that  $a$  is real and positive, and that  $x$  and  $y$  are each taken at random between  $a$  and  $-a$ , what is the chance that  $(x+y)^n$  is less, and  $(x+y)^{n+1}$  greater, than  $a^n$ ? Show that there are four different answers (including zero) depending on the oddness or evenness of  $n$ , and on the numerical limits assigned to  $a$ .

**14470.** (J. J. BARNVILLE, B.A.)—Having  $u_n - 1 + u_{n+1} = 5u_n$ , prove that

$$\begin{aligned} \frac{1}{1+1} + \frac{1}{4+1} + \frac{1}{19+1} + \frac{1}{91+1} + \dots &= \frac{\sqrt{21}}{6}, \\ \frac{1}{1+4} + \frac{1}{4+4} + \frac{1}{19+4} + \frac{1}{91+4} + \dots &= \frac{\sqrt{21}}{12}, \\ \frac{1}{4+5} + \frac{1}{7+5} + \frac{1}{31+5} + \frac{1}{148+5} + \dots &= \frac{7+3\sqrt{21}}{90}, \\ \frac{1}{7+5} + \frac{1}{4+5} + \frac{1}{13+5} + \frac{1}{61+5} + \dots &= \frac{7+2\sqrt{21}}{60}, \\ \frac{1}{2+5} - \frac{1}{6+5} + \frac{1}{23+5} - \frac{1}{110+5} + \dots &= \frac{1}{14}, \\ \frac{1}{1+1} - \frac{1}{6-1} + \frac{1}{29+1} - \frac{1}{139-1} + \dots &= \frac{\sqrt{21}}{14}. \end{aligned}$$

**14471.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—(Suggested by Quest. 14445.) (1) Show that

$$q^n \equiv 1 \pmod{p}, \text{ where } x = 2^{2^Q-3}, Q = q^2, p = Q.4^Q + 1 = \text{prime.}$$

(2) Show that

$$q^n \equiv 1 \pmod{p}, \text{ where } x = 2^{4^Q-4}, Q = q^4, p = Q.16^Q + 1 = \text{prime.}$$

**14472.** (ROBERT W. D. CHRISTIE.)—It is known that we can form a test for a divisor  $2^n$  or  $5^n$  by cutting off  $n$  figures. It is required to generalize the process for divisors  $3(2^n), 3(5^n), 9(2^n), 9(5^n), 11(2^n), 11(5^n), 37(2^n), 37(5^n)$ , and generally  $p(2^n)$  or  $p(5^n)$ .

**14473.** (W. S. COONEY.)—Construct the triangle, being given any three of the following six points:—the centres of the squares described externally and internally on the sides.

**14474.** (R. KNOWLES.)—Tangents from a point T meet a parabola in P, Q; the circle TPQ cuts the parabola again in C, D; the sides PC, QD of the quadrilateral PQCD meet in E; the diagonals in G; M is the mid-point of EG; MN<sub>1</sub>, EN<sub>2</sub>, GN<sub>3</sub> are drawn at right angles to the axis; MN<sub>1</sub> meets the parabola in K. Prove that KN<sub>1</sub><sup>2</sup> = EN<sub>2</sub>. GN<sub>3</sub>.

**14475.** (A. GEORGE.)—Find the maximum value of an isosceles

triangle DEF inscribed in an isosceles triangle ABC, D being on BC, EF inclined at an angle  $\alpha$  to BC, where  $\alpha$  is less than both  $\frac{1}{2}A$  and  $\frac{1}{2}(\pi - A)$ .

14476. (Professor E. J. NANSON.)—If

$$\frac{a^2 - bc}{a} + \frac{b^2 - ca}{b} + \frac{c^2 - ab}{c} = 0,$$

then

$$\frac{a}{a^2 - bc} + \frac{b}{b^2 - ca} + \frac{c}{c^2 - ab} = 0.$$

14477. (C. E. BICKMORE, M.A.)—Express as the product of two factors, each factor being the sum of two squares,  $(a^2 - 4b^2 + c^2)^2 + (4abc)^2$ .

14478. (Rev. T. MITCHESON, B.A.)—P, Q are the ends of conjugate semi-diameters of an ellipse, and a straight line drawn from the intersection of the normals at P and Q, through the centre C, meet PQ in S, whilst the tangents meet at the point (h, k); show that

$$CS = \frac{a^2 h^2}{(a^4 h^2 + b^4 k^2)^{\frac{1}{2}}}$$

14479. (SALUTATION.)—I is the incentre of the triangle ABC, of which A is the greatest angle. P is a point on the incircle, and through P lines are drawn parallel to the three sides of the triangle, and meeting the incircle again in Q, R, S respectively. QR, RS being joined, prove that the quadrilateral PQRS is a maximum when AIP is a right angle, and find its mean area.

#### OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

6366. (G. J. GRIFFITHS, M.A.)—Prove that the sum of the squares of the reciprocals of all numbers which are not divisible by the square of any prime is  $15\pi^{-2}$ .

6372. (Rev. J. L. KITCHIN, M.A.)—Find the sum of the following series,  $n$  and  $k$  being integers:—

$$1 + k(n-1) + \frac{k(k-1)(n-1)}{1 \cdot 2} + \frac{k(k-1)(k-2)(n-1)(n)}{1 \cdot 2 \cdot 3} + \dots$$

6381. (W. J. C. MILLER, B.A.)—A GUNTER'S surveyor's chain is broken at random, at two of the junctures of its links, into three pieces. Show that the probability that a triangle can be formed of these pieces is  $\frac{2}{3}$ ; and hence, by a general solution, prove that the chance of being able to form a triangle with three random segments of a divided straight line is  $\frac{2}{3}$  or  $\frac{1}{2}$ .

6385. (R. PENDLEBURY, M.A.)—Two triangles circumscribe a parabola, and the two circles which circumscribe the triangles intersect in O (not the focus of the parabola). Prove that the conic which passes through the six vertices of the triangles also passes through O.

6387. (R. A. ROBERTS, M.A.)—Prove that the inflexional tangents of a plane cubic may be arranged in twelve sets of six, each of which touches a conic.

6400. (J. HAMMOND, M.A.)—Prove that the surface

$$x^2 + y^2 + z^2 - 3xyz = a^3$$

is one of revolution, and find its axis and the equation of the generating curve (referred to its asymptotes as axes).

#### NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—Vol. LXXI. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.O. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

#### THE LONDON MATHEMATICAL SOCIETY.

Thursday, January 11th, 1900.—Lt.-Col. Allan Cunningham, R.E., V.P., in the Chair. Ten members present.

The following members were elected:—Miss Beatrice M. Cave Browne Cave, Miss Frances E. Cave Browne Cave, and Mr. H. W. Richmond, M.A., Fellow of King's College, Cambridge.

Professor Love gave a sketch of a paper by Mr. J. H. Michell, entitled "Elementary Distributions of Plane Stress."

Lt.-Col. Cunningham (Mr. Kempe in the Chair) communicated a preliminary sketch of a "General Method of Factorization of Biquadratics," with special application to quartans,  $N = x^4 + y^4$ .

The following papers were communicated in abstract, viz. :—

"A Problem in Resonance, illustrative of the Mechanical Theory of Selective Absorption of Light," Professor H. Lamb.

"An Abstract Simple Group of Order 25920," Dr. L. E. Dickson.

FROM

## WILLIAMS & NORGATE'S LIST OF SCHOOL BOOKS.

**EUGÈNE'S THE STUDENT'S COMPARATIVE GRAMMAR OF THE FRENCH LANGUAGE.** With an Historical Sketch of the Formation of French. For the Use of Public Schools. With Exercises. By EUGÈNE FASSACHT, late French Master, Westminster School. Twentieth Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or, separately, Grammar, 3s.; Exercises, 2s. 6d.

"In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen."—*Athenæum*.

**EUGÈNE'S FRENCH METHOD.** Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar." By the same Author. Sixteenth Edition. Crown 8vo, cloth, 1s. 6d.

"Certainly deserves to rank among the best of our elementary French exercise books."—*Educational Times*.

**EUGÈNE'S COMPARATIVE FRENCH-ENGLISH STUDIES.** Grammatical and Idiomatic. Being an entirely re-written Edition of the "French Exercises for Middle and Upper Forms." Fourteenth Edition. Cloth, 2s. 6d.

**BOËLLE (JAMES).—FRENCH COMPOSITION THROUGH LORD MACAULAY'S ENGLISH.** Edited, with Notes, Hints, and Introduction, by JAMES BOËLLE, B.A. Univ. Gall., Senior French Master, Dulwich College, &c. Crown 8vo, cloth.

Vol. I. Frederick the Great. 3s.

Vol. II. Warren Hastings. 3s. 6d.

Vol. III. Lord Clive. 3s.

"This, we may say at once, is an exceedingly useful idea, well carried out, and one of the best things of its class that we have seen. . . . We can pronounce the equivalence of the idioms recommended to be quite unusually just."—*Saturday Review*.

**DELBOS.—THE STUDENT'S GRADUATED FRENCH READER.** For the Use of Public Schools. I.—First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LÉON DELBOS, M.A., late of King's College, London. Twelfth Edition. 166 pages. Crown 8vo, cloth, 2s.

**DELBOS.—THE STUDENT'S GRADUATED FRENCH READER.** For the Use of Public Schools. II.—Second Year: Historical Pieces and Tales. Edited, with Notes, by LÉON DELBOS, M.A., late of King's College, London. Sixth Edition. 180 pages. Crown 8vo, cloth, 2s.

"It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos."—*Athenæum*.

"This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes. . . . A thoroughly good book of this kind should, in fact, be calculated to inspire a taste for literature in the student's mind. The volumes edited by M. Delbos fairly meet this requirement."—*Journal of Education*.

"The notes are critical and explanatory. The book is well printed and excellently got up."—*Educational Times*.

**DELBOS.—LITTLE EUGÈNE'S FRENCH READER.** For Beginners. Anecdotes and Tales. Edited, with Notes and a complete Vocabulary. Second Edition. Crown 8vo, cloth, 1s. 6d.

**VICTOR HUGO.—LES MISÉRABLES.** Les Principaux Épisodes. Edited, with Life and Notes, by J. BOËLLE, Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s. 6d.

"A worthy addition to our stock of French reading books, which will be welcomed by numberless masters. . . . M. Boëlle's notes are full and to the point, his philology is sound, and his translations idiomatic."—*Journal of Education*.

**VICTOR HUGO.—NOTRE-DAME DE PARIS.** Adapted for the use of Schools and Colleges. By J. BOËLLE, B.A., Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s.

"Equipped in the same excellent manner as the same author's 'Misérables.' . . . Makes an admirable school book."—*Scotsman*.

**FOA (MADAME EUGEN).—CONTES HISTORIQUES.** (Chârin de Louis XV—Bertrand Duguesclin—Dupuytren—Grety—Greuze.) With Idiomatic Notes by G. A. NEUVET. Third Edition. Cloth, 2s.

**FLEURY'S HISTOIRE DE FRANCE,** racontée à la Jeunesse. Edited for the use of English Pupils, with Grammatical Notes, by AUGUSTE BELJAME. Second Edition. 12mo, cloth, 3s. 6d.

**WEISSE'S COMPLETE PRACTICAL GRAMMAR OF THE GERMAN LANGUAGE.** With Exercises on Conversation, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely re-written. Crown 8vo, cloth, 6s.

"We have no hesitation in pronouncing this the fullest and most satisfactory German grammar yet published in England."—*Journal of Education*.

**WEISSE'S SHORT GUIDE TO GERMAN IDIOMS.** Being a Collection of the Idioms most in use. With Examination Papers. 8vo, cloth, 2s.

**MÖLLER (A.).—A GERMAN READING BOOK.** A Companion to Schlatter's "German Class Book." New Edition. Corrected to the Official German Spelling. With a complete Vocabulary. 12mo, cloth, 2s.

**HEIN'S GERMAN EXAMINATION PAPERS.** Comprising a complete set of German Papers set at the Local Examinations in the four Universities of Scotland. By G. HEIN, Aberdeen Grammar School. Crown 8vo, cloth, 2s. 6d.

**A SHORT SKETCH OF GERMAN LITERATURE.** Prepared for the Scottish Leaving Certificate Examinations. By VIVIAN PHILLIPS, B.A., Fettes College. Thoroughly Revised. Second Edition. Fott 8vo, 1s.

**FOUQUE'S UNDINE, SINTRAM, ASLAUGA'S RITTER, DIE BEIDEN HAUPTLEUTE.** Four Parts in One Vol. 8vo, cloth, 5s.

Undine, 1s.; cloth, 1s. 6d. Sintram, 1s. 6d.; cloth, 2s. Aslauga's Ritter, 1s.; cloth, 1s. 6d. Die beiden Hauptleute, 1s.; cloth, 1s. 6d.

\*\* In ordering through Booksellers, "Williams & Norgate's Edition" should be specified: it is the only uniform edition, clearly printed, in crown 8vo.

**HEBREW TEXTS,** in large type, for Classes: **Genesis.** Second Edition. 16mo, cloth, 1s. 6d. **Psalms.** 16mo, cloth, 1s. **Isaiah.** 16mo, cloth, 1s. **Job.** 16mo, cloth, 1s.

20 SOUTH FREDERICK STREET, EDINBURGH;

AND 7 BROAD STREET, OXFORD.

# BLACKWOODS' NEW EDUCATIONAL WORKS.

## BLACKWOODS' ILLUSTRATED CLASSICAL TEXTS.

General Editor—H. W. AUDEN, M.A., Assistant-Master at Fettes College.

### LEADING FEATURES OF THE SERIES:—

Interesting Biographical and Critical Introductions.  
A Sound Text.  
Practical Notes.  
Careful Typography.  
Useful Summaries and Appendices.  
Numerous Plain and Coloured Illustrations, Maps, and Plans.

NOW READY.

**Cæsar.—Gallic War. Books IV., V.** By ST. J. B. WYNNE WILLSON, M.A., Assistant-Master at Rugby. *With or without Vocabulary.* 1s. 6d.

(Prescribed for the Oxford Local, London Matriculation, and College of Preceptors Examinations, 1900.)

**Virgil.—Georgics. Book IV.** By J. SARGEANT, M.A., Assistant-Master at Westminster. 1s. 6d.

(Prescribed for the Cambridge Higher Local Examinations, 1900, 1901.)

*In active preparation.*

**Ovid.—Metamorphoses (Selections).** By J. H. VINCE, M.A., Assistant-Master at Bradfield. [Immediately.]

**Cicero.—In Catilinam. Books I.—IV.** By H. W. AUDEN, M.A., Assistant-Master at Fettes College. [Shortly.]

**Cæsar.—Gallic War. Books I.—III.** By J. M. HARDWICH, M.A., Assistant-Master at Rugby.

**Homer.—Odyssey. Book VI.** By E. E. SIKES, M.A., Fellow and Lecturer of St. John's College, Cambridge.

**Ovid.—Elegiac Extracts.** By A. R. F. HYSLOP, M.A., Assistant-Master at Harrow.

**Sallust.—Jugurtha.** By J. F. SMEDLEY, M.A., Assistant-Master at Westminster.

**Homer.—Odyssey. Book VII.** By E. E. SIKES, M.A., Fellow and Lecturer of St. John's College, Cambridge.

**Demosthenes.—Olynthiacs I.—III.** By H. SHARPLEY, M.A., formerly Assistant-Master at Marlborough.

**Cicero.—Pro Lege Manilia and Pro Archia.** By K. P. WILSON, M.A., Assistant-Master at Fettes College.

**Cicero.—Pro Cæcina.** By Rev. J. M. LUPTON, M.A., Assistant-Master at Marlborough.

**Tacitus.—Agricola.** By H. F. MORLAND SIMPSON, M.A., Rector of Aberdeen Grammar School.

**Livy.—Book XXVIII.** By G. MIDDLETON, M.A., Lecturer in Sanscrit and Comparative Philology in the University of St. Andrews.

**Euripides.—Hecuba.** By F. GRIFFIN, M.A., Headmaster of Birkenhead School.

**Nepos.—Select Lives.** By Rev. E. J. W. HOUGHTON, M.A., Headmaster of King Edward's Grammar School, Stratford-on-Avon.

**Xenophon.—Anabasis. Books I., II.** By A. JAGGER, B.A., Hymer's College, Hull.

**Virgil.—Æneid. Books V., VI.** By ST. J. B. WYNNE WILLSON, M.A., Assistant-Master at Rugby.

*Other Volumes to follow.*

## GREEK AND LATIN.

**Greek Prose Phrase-Book.** By H. W. AUDEN, M.A., Editor of "Meissner's Latin Phrase-Book." Interleaved. 3s. 6d.

**Greek Test Papers.** By JAMES MOIR, Litt.D., LL.D., Co-Rector, Aberdeen Grammar School. 2s. 6d.

**Higher Greek Unseens.** By H. W. AUDEN, M.A., Assistant-Master at Fettes College. 2s. 6d.

**Higher Greek Prose.** By H. W. AUDEN, M.A. 2s. 6d.

**Lower Greek Prose.** By K. P. WILSON, M.A., Assistant-Master at Fettes College. 2s. 6d.

**Higher Latin Unseens.** By H. W. AUDEN, M.A. 2s. 6d.

**Higher Latin Prose.** By H. W. AUDEN, M.A. 2s. 6d.

\*.\* KEY (for Teachers only), 5s. net.

**Lower Latin Unseens.** By W. LOBBAN, M.A. 2s. 6d.

**Lower Latin Prose.** By K. P. WILSON, M.A. 2s. 6d.

\*.\* KEY (for Teachers only), 5s. net.

**Tales of Ancient Thessaly.** An Elementary Latin Reading Book, with Vocabulary and Notes. By J. W. E. PEARCE, M.A., late Assistant-Master, University College School, London. 1s.

## ENGLISH.

### BLACKWOODS' SCHOOL SHAKESPEARE.

Edited by R. BRIMLEY JOHNSON. Each Play complete, with Introduction, Notes, and Glossary. In Crown 8vo Volumes, price 1s. 6d. each, cloth; paper, with cloth back, 1s.

#### As You Like It.

(Prescribed for Cambridge and Oxford Locals and College of Preceptors Examinations, 1900.)

#### Richard II.

(Prescribed for the Oxford and Cambridge Schools Examinations, 1900.)

**The Merchant of Venice.** | **Julius Cæsar.** | **The Tempest.**

### BLACKWOODS' LITERATURE READERS.

Edited by JOHN ADAMS, M.A., B.Sc., F.C.P., Rector of the Free Church Training College, Glasgow.

<b>Book I.</b> ... ..	Price 1s.	<b>Book III.</b> ... ..	Price 1s. 6d.
<b>Book II.</b> ... ..	Price 1s. 4d.	<b>Book IV.</b> ... ..	Price 1s. 6d.

**A History of English Literature.** For Secondary Schools. By J. LOGIE ROBERTSON, M.A., First English Master, Edinburgh Ladies' College. 3s.

**Outlines of English Literature.** By J. LOGIE ROBERTSON, M.A. 1s. 6d.

**English Verse for Junior Classes.** By J. LOGIE ROBERTSON, M.A. Part I.—CHAUCER TO COLERIDGE. Part II.—NINETEENTH CENTURY. Each 1s. 6d. net.

**English Prose for Junior and Senior Classes.** Part I.—MALORY TO BOSWELL. Part II.—NINETEENTH CENTURY. By J. LOGIE ROBERTSON, M.A. Each 2s. 6d.

**Paraphrasing, Analysis, and Correction of Sentences.** By D. M. J. JAMES, M.A. 1s.

**One Hundred Stories for Composition.** Told in Alternative Versions. 1s. 3d.

**Stormonth's Handy School Dictionary.** New Edition, thoroughly Revised. By WILLIAM BAYNE. 1s.

## FRENCH AND GERMAN.

**The Tutorial Handbook of French Composition.** By ALFRED MERCIER, L.ès-L., Lecturer on French Language and Literature in the University of St. Andrews. 3s. 6d.

**The Children's Guide to the French Language.** By ANNIE G. FERRIER, Teacher of French in the Edinburgh Ladies' College. 1s.

**Select Passages from Modern French Authors (Prose and Verse).** With short Literary and Biographical Notices. Part I.—ADVANCED COURSE. Part II.—JUNIOR COURSE. By L. E. KASTNER, B.A., Lecturer in Modern Languages at Caius College, Cambridge. 2s. 6d. each.

**French Historical Unseens.** For Army Classes. By N. E. TOKE, B.A. 2s. 6d.

**A Compendious German Reader.** Consisting of Historical Extracts, Specimens of German Literature, Lives of German Authors, an Outline of German History (1640–1890), Biographical and Historical Notes, Especially adapted for the use of Army Classes. By G. B. BEAK, M.A. Oxon., Modern Language Master at The King's School, Bruton. 2s. 6d.

**Progressive German Composition (with Copious Notes and Idioms) and First Introduction to German Philology.** By LOUIS LUBOVIC, German Lecturer in the Free Church Training College, Glasgow. 3s. 6d.

Also in Two Parts—**Composition**, 2s. 6d.; **Philology**, 1s. 6d.

\*.\* KEY to Composition (for Teachers only), 5s. net.

**Lower-Grade German:** Reading, Supplementary Grammar with Exercises, and Material for Composition, with Notes and Vocabulary, and Ten Popular Songs in Sol-fa Notation. By LOUIS LUBOVIC. 2s. 6d.

## MATHEMATICS.

**Modern Geometry of the Point, Straight Line, and Circle.** An Elementary Treatise. By J. A. THIRD, M.A., Headmaster of Spier's School, Beith. 3s.

**Arithmetic.** With numerous Examples, Revision Tests, and Examination Papers. By A. VEITCH LOTHIAN, M.A., B.Sc., F.R.S.E., Mathematical and Science Lecturer, E.C. Training College, Glasgow. *With Answers*, 3s. 6d.

COMPLETE EDUCATIONAL CATALOGUE FORWARDED POST FREE ON APPLICATION.

WILLIAM BLACKWOOD & SONS, EDINBURGH AND LONDON.

## NEW TEXT-BOOKS ON THE SCIENCE AND ART OF EDUCATION.

By **JOSEPH H. COWHAM**

(Lecturer on Education, Westminster Training College, S.W.).

### COWHAM'S NEW SCHOOL METHOD. (Complete.) Price 4s. 6d.

Also in Parts, viz.:-

Part I. How to Teach Reading, Spelling, Writing, and Drawing. 1s. 6d.

Part II. How to Teach Arithmetic. 1s. 6d.

Part III. How to Teach Geography, Grammar, History, and Elementary Science. 1s. 6d.

"I know of no manual so thorough and practical."—*Sub-Inspector of Schools.*

"We certainly like the book."—*Journal of Education.*

### GRAPHIC LESSONS IN PHYSICAL AND ASTRONOMICAL GEOGRAPHY. Price 4s. 6d.

"A Teacher's model lesson book." With 200 Outline Blackboard Sketches. Invaluable for teaching purposes.

"Exceedingly well done."—*Journal of Education.*

### PRINCIPLES OF ORAL TEACHING AND MENTAL TRAINING.

Being an Introduction to Psychology and Ethics for Teachers. Price 3s. 6d.

"The best for students."—*Journal of Education.*

The late R. H. Quick wrote:—"A young teacher who digested half your book would have a good insight into the theory of his calling."

### SCHOOL ORGANIZATION, HYGIENE, AND DISCIPLINE.

(SCHOOL ETHICS.) Price 3s. 6d.

"This manual will be most valuable, for it is founded on practical experience."—*Daily Telegraph.*

Westminster School Book Depot, S.W.; also of Simpkin, Marshall, Hamilton, Kent, & Co., Limited, and all Booksellers.

## 210,000 COPIES HAVE BEEN ISSUED OF BELL'S STANDARD ELOCUTIONIST.

Principles and Exercises, with a copious Selection of Extracts in Prose and Poetry, adapted for Reading and Recitation. By D. C. BELL and ALEX. MELVILLE BELL, F.E.I.S. With Frontispiece and Diagrams, Roxburgh binding, 616 pages, price 3s. 6d.

\* This edition contains 64 additional pages, comprising A NEW SELECTION OF CLASSIFIED RECITATIONS.

The *Scotsman* says:—"Far the best of the many books of the kind."

**LE PETIT PRECEPTEUR**; or, First Steps to French Conversation. By F. GRANDINEAU, formerly French Master to Her Majesty Queen Victoria. Fifty Woodcuts. Sixty-second Edition. Cloth, 1s. 6d.

**DER KLEINE LEHRER**; or, First Steps to German Conversation. On the Plan of "Le Petit Précepteur." Ninth Edition. Cloth, 2s.

LONDON: HODDER & STOUGHTON, 27 PATERNOSTER ROW, E.C.

 Headmasters should apply for

## EYRE & SPOTTISWOODE'S ILLUSTRATED CATALOGUE OF DRAWING INSTRUMENTS,

Sets in Boxes, Protractors, Rules, Scales, Ruling Pens, Drawing Boards, Set-squares, T-squares, Drawing Pins, Indian Ink, Brushes, Palettes, Pencils, Crayons, &c., &c.

**BOXES OF WATER AND OIL COLOURS,**

And all Drawing Material suitable for Schools and Colleges.

LONDON: GREAT NEW STREET, FLEET STREET, E.C.

FOR THE LOCAL EXAMINATIONS.

### DINGLEWOOD SHAKESPEARE MANUALS.

CAN BE USED WITH ANY TEXT BOOK.

Latest Addition:—

**AS YOU LIKE IT. Questions and Notes. 1s.**

"There are few questions an examiner would hit on which are not anticipated in these little books."—*Scottish Guardian.*

JOHN HEYWOOD, LONDON AND MANCHESTER.

## CAREY'S "GRADUS AD PARNASSUM," WITH THE ENGLISH MEANINGS.

Revised, Corrected, and Augmented by a Member of the University of Cambridge.

Post 8vo, cloth, Price 7s.

THE STATIONERS' COMPANY, STATIONERS' HALL, LONDON.

## WORKS

BY THE

Rev. G. HUGH JONES.

### Higher Scripture Teaching: St. Luke.

Price 1s. 6d.

### Lesson Papers in Religious Knowledge: St. Matthew.

Price 6d.

"Very scholarly work may be brought within easy grasp of those average pupils who seem very imperatively to need a guiding hand in the preparation of their divinity lessons." *School World.*

"Mr. Hugh Jones has done well in making his references always to the 'Cambridge Bible for Schools.'" *School Guardian.*

"To point out the exact information which University Local examiners consider candidates should possess for 'Pass' or 'Distinction.'" *School Board Chronicle.*

"Have the great merit of limiting and fixing the attention of the student." *J. M. D. Meiklejohn, M.A.*

LONDON: SIMPKIN, MARSHALL, & CO.

BY JOHN S. RAWLE, F.S.A.,

Late Examiner to the Department of Science and Art.

## SECOND GRADE PRACTICAL GEOMETRY, PLANE & SOLID, CURVES, SCALES & PATTERN DRAWING.

REVISED AND ENLARGED. NOW READY.

Containing the additional matter as required by the Departmental Circular of March, 1895, and forming a complete Text-Book for the Science and Art Examinations.

250th Thousand. MORE THAN 600 DIAGRAMS.

Price 1s. Bound in cloth, 2s.

Class Sheets for Practical Geometry	...	...	...	...	1s.
Practical Geometry Test Papers	...	...	...	...	4d.
Freehand Drawing Test Papers	...	...	...	...	1s.

LONDON:

SIMPKIN, MARSHALL, HAMILTON, KENT, & CO.

## EXAMINATION PAPER

AS USED BY THE

## COLLEGE OF PRECEPTORS.

In strict accordance with the College requirements, and each Sheet bears their Watermark.

Packed in Reams of 480 Sheets	...	...	per Ream,	2s. 6d.
" " 960 " "	...	...	" "	5s. 0d.

Bookkeeping Paper, ruled for Ledger, Cash Book, and Journal, 1s. per 100 Sheets. Remittance should accompany Order.

HEWARD & SHELBORNE, Wholesale and Retail Stationers,  
63 HIGH HOLBORN, LONDON, W.C.

## JOSEPH CILLOTT'S

Gold Medals,  
Paris, 1878,  
1889.

Numbers for Use in Schools—

## JACKSON'S SYSTEM OF UPRIGHT PENMANSHIP

IN RELATION TO

### "Great Thoughts" Handwriting Competition.

**T**HE recent Competition instituted by the proprietors of "Great Thoughts"—the results of which have just been published in Nos. 349, 350 of that Journal—gives the most surprising and decisive testimony to the inherent merits and unapproached superiority of Upright Penmanship. The fact that this Competition was open to all without favour or distinction, and that it was absolutely independent in its character, only emphasizes the contrast and enhances the success of the **Vertical Writers**. It is hardly necessary to state that **Mr. Jackson was not connected in any way whatever with this Competition, the promoters and adjudicators of which are utterly unknown to him.**

SIX PRIZES were offered to those girls and boys who produced the best written transcriptions of a prose passage chosen by the editor. THOUSANDS of competitors of both sexes sent up their work, and the report states that the task of adjudication was a most difficult one. Five out of the six First Prize Winners come from as many different schools, and EVERY ONE OF THOSE SCHOOLS adopted the **Jackson System of Upright Penmanship** many years ago, with the most gratifying results. The Winning Schools, as given in "Great Thoughts," are here subjoined, together with their achievements in Vertical Handwriting. **THE COINCIDENCE IS NOT ONLY STARTLING, IT IS ACTUALLY UNIQUE IN THE HISTORY OF THE CALIGRAPHIC ART!!!**

1ST PRIZE—NELLIE PLATT, age 8.

**SIR JOSIAH MASON'S ORPHANAGE, BIRMINGHAM.**

(This School is the Grand Silver Challenge Shield-Holder for 1899-1900, and Winner of 173 Prizes and 166 Certificates of Merit in **Jackson's Imperial Competitions** since 1894—Six years.)

1ST PRIZE—DAVID WIGGINS, age 12.

**SEAHAM HARBOUR NATIONAL SCHOOL.**

(This School was the Grand Silver Challenge Shield-Holder for 1897-8, and Winner of 503 Prizes and 263 Certificates of Merit in **Jackson's Imperial Competitions** since 1889—Eleven years.)

2ND PRIZE—LILLIE TYRER, age 12.

**NORMA SCHOOL, WATERLOO, LIVERPOOL.**

(This School was the Grand Silver Challenge Shield-Holder for 1898-9, and Winner of 162 Prizes and 72 Certificates of Merit in **Jackson's Imperial Competitions** since 1894—Six years.)

2ND PRIZE—H. H. SMILES, age 10.)

**SOUTH HETTON BOYS' SCHOOL.**

(This School has been the Winner of 100 Prizes and 313 Certificates of Merit in **Jackson's Imperial Competitions** since 1891—Nine years.)

3RD PRIZE—WINNIE CLARIDGE, age 6.

**LADIES' SCHOOL, 21 ST. MICHAEL'S ROAD, WALLINGTON.**

(This School has been the Winner of 38 Prizes and 52 Certificates of Merit in **Jackson's Imperial Competitions** since 1888—Twelve years.)  
The only other (3rd) Prize Winner, a boy, had been taught on the sloping style, and was 13 years of age.

The above-named Schools also secured 51 out of the 247 Certificates of Merit—more than one-fifth of the entire number awarded.

For Prospectus, Prize List, Specimen Books, and all particulars of Jackson's System of Upright Penmanship, apply to the Publishers,

# THE ROYAL SCHOOL SERIES.

## BOOKS FOR SECONDARY SCHOOLS.

JUST PUBLISHED.

### GREEK AND ROMAN HEROES.

Selections from Plutarch's Lives, adapted for Class Reading by H. SPENSER, LL.D., Classical Master in the Edinburgh Academy. With Illustrations. Cloth boards, price 2s.

Plutarch has been called "the interpreter of Greece and Rome to Modern Europe." His great biographies are monuments of literary value, which have had more influence upon the leading men of the world than any other product of classical antiquity. Dr. Spenser has now made these biographies accessible to boys and girls. His book will make a fascinating reader, especially in secondary schools.

### FIRST LESSONS IN ENGLISH GOVERNMENT.

An Easy Introduction to the Law and Custom of the Constitution. With many Illustrations, cloth boards, price 1s. 6d.

This is a citizen reader of the best type, well arranged, well worked out on the historical method, and written in a simple and interesting style. It is capably illustrated, and is furnished with a glossary of technical terms.

### THE ROYAL KINDERGARTEN COPY BOOKS.

For Pencil Tracing. Eight Books, Sixteen Pages. Price 1d. each.

The best thing yet produced for infant schools and kindergarten. These books mark a new departure in the teaching of writing to young children. Every letter is traced throughout, but printed in a soft blue tint instead of the dotted black line commonly used. The paper is specially selected for lead-pencil work.

### PICTURE ESSAYS.

An Illustrated Composition Book. 112 pages, with over One Hundred Illustrations. Price 4d., paper cover; or, in limp cloth, 6d.

By this book the scholar gathers most of the material for his essays from a large series of descriptive pictures. Pictures without words, and eighty-five outline essays are provided. The Introduction prefixed contains information on the stops, capital letters, relative pronouns, and letter-writing.

### FRENCH AND GERMAN.

**METHODE NATURELLE POUR APPRENDRE LE FRANÇAIS.** Fondée sur l'Enseignement Intuitif. By GEORGE HOGGEN, M.A. Illustrated. 332 pages, post 8vo, cloth, price 3s. 6d.

# PROFESSOR MEIKLEJOHN'S SERIES.

**The Art of Writing English.** A Manual for Students. With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters. By J. M. D. MEIKLEJOHN, M.A. Second Edition. Crown 8vo, 340 pp. . . . . 2s 6d.

"The Art of Writing English' teems with good advice."—*Literary World*.  
"Whatever Prof. Meiklejohn writes is sure to be vigorous and racy, and, on the subject of English composition, he is peculiarly well qualified to speak."  
The Journal of Education.

**One Hundred Short Essays in Outline.** By Professor MEIKLEJOHN. Second Edition. Crown 8vo, 110 pp. . . . . 1s.

These Outline Essays have been prepared to assist Candidates for Queen's Scholarships, for the Civil Service, and in other Examinations. They show the young students how to put their matter into the right perspective, and how to make clear and brief statements. They treat of such subjects as Athletics, The Bank of England, The Bicycle, Competition, The Navy, Newspapers, &c., &c.—in short, subjects generally set in Public Examinations.

**A New Geography on the Comparative Method.** With Maps and Diagrams and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. Twenty-third Edition. 130th Thousand. Crown 8vo, 630 pp. . . . . 4s. 6d.

"A most useful manual for examiners, and full of stimulating matter for students of geography. Its picturesqueness of description and vividness of style make it almost as interesting and enjoyable reading as a book of travels."—*The Journal of Education*.  
"For all that is best worth knowing no better book than this could be studied."—*The Educational News*.

**A School Geography; with Special Reference to Commerce and History.** With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A., sometime Adam de Brome Exhibitioner of Oriol College, Oxford, F.R.G.S. Crown 8vo, 410 pp. . . . . 2s. 6d.

"This is a well-planned book, with many good features, and the promise of the title-page is sedulously fulfilled."—*The Educational Times*.  
"The whole plan of the book has been carefully thought out, and as the result we have a good school geography."—*The School Guardian*.

**The Comparative Atlas.** By J. G. BARTHOLOMEW, F.R.G.S., and Edited by Professor MEIKLEJOHN. Containing 64 Plates and a General Index . . . . . 2s. 6d.

"No atlas that we know at anything like the price gives so much so well."  
The Teachers' Monthly.  
"This is certainly the most comprehensive work ever published at the moderate price of half-a-crown. From the attractive frontispiece, representing the flags of all nations, to the final page on geographical etymology, there is not a wasted inch."—*The Teachers' Review*.

**A New History of England and Great Britain.** With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. Fifteenth Edition. Crown 8vo, 740 pp. . . . . 4s. 6d.

"I like your History very much. It is suggestive, and does not ignore the social and literary side of things."—Miss A. F. Andrews, *Maida Vale High School for Girls, W.*  
"I am very pleased with the concise statements and orderly marshalling of facts: such an improvement on our ordinary Histories."—E. A. Little, Esq., M.A., *The College, Buxton*.

**The English Language: its Grammar, History, and Literature.** By J. M. D. MEIKLEJOHN, M.A. Nineteenth Edition. Enlarged, with Exercises and additional Analyses. Crown 8vo, 470 pp. . . . . 4s. 6d.

"As stimulating in matter as it is attractive in form. It puts life into the dry bones of fact."—A. J. Watson, Esq., M.A., *Rector, The Academy, Dumbarton*.  
"I gave it to a girl candidate for an English scholarship; she got first place, and valued the help she got from the book."—W. Johnson, Esq., B.A., *Elmfield College, York*.

**General Intelligence Papers; with Exercises in English Composition.** By GERALD BLUNT, M.A. Crown 8vo . . . . . 2s.

The object of these sets of questions—designed not for "crumming," but for a successive help to teachers and students—is to afford some test of general intelligence, common sense, and varied ability.

**A Short Arithmetic.** By G. A. CHRISTIAN, B.A., and A. H. BAKER, B.A. Crown 8vo, 196 pp. . . . . 1s.

With Answers, 1s. 6d.

"In the preparation of the 'Short Arithmetic' the authors have chiefly had in view the requirements of pupils varying in age from twelve to sixteen. Examples have been selected from a very wide area. These include the University Local Examinations, the University School Examinations, Examinations of the College of Preceptors and of the Education Department, and the Examinations for County Council Scholarships."

**A School Algebra for Junior Forms.** By F. OSCAR LANE, B.Sc. Lond., Assistant Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. . . . . 1s. 6d.

With Answers, 266 pp. 2s. 0d.

"A very trustworthy book for beginners, extending to indices, surds, and progressions."—*The University Correspondent*.

**A Short Geography, with the Commercial Highways of the World.** Fifteenth Edition. Crown 8vo, 196 pp. . . . . 1s.

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid*.  
"Clearness and conciseness exemplified."—*The Private Schoolmaster*.

**A Short History of England and Great Britain.** B.C. 55 to A.D. 1890. Eleventh Edition. Crown 8vo . . . . . 1s.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature; and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education*.

**A Short Grammar of the English Tongue, with Three Hundred and Thirty Exercises.** Tenth Edition . . . . . 1s.

This little book is written in the clearest and simplest style for beginners. It contains:—

- |                                 |   |
|---------------------------------|---|
| i. The Simplest Definitions.    | iv. Graduated Methods of Parsing.       |
| ii. Slowly graduated Exercises. | v. Bad Grammar Corrected, with Reasons. |
| iii. Clearly printed Tables.    | vi. Analysis, with Plain Diagrams.      |

**A New Spelling Book.** With Side Lights from History. Eighth Edition. Crown 8vo, 152 pp. . . . . 1s.

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian*.

**The British Colonies and Dependencies: their Resources and Commerce.** With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. Third Edition. Crown 8vo, 96 pp. . . . . 6d.

"This manual is terse and full; intelligently paragraphed and skilfully managed typographically. It does credit to the compiler, and we hope this work may gain the recognition it really merits."—*The Educational News*.

**Africa: its Geography, Resources, and Chronicle of Discovery up to 1897.** By M. J. C. MEIKLEJOHN, B.A. Oxon. Third Edition. Crown 8vo, 76 pp. . . . . 4d.

"This little book is, for its size, remarkably full of information about Africa, and gives pithy explanations of such current expressions as 'sphere of influence' and 'hunter-land,' &c."—*The Teachers' Aid*.

**Europe: its Physical and Political Geography, with Chapters on Latitude and Longitude, Day and Night, and the Seasons.** Adapted to the requirements of the Code, with a Double-Page Map, in Colour. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. 96 pp. . . . . 6d.

# CAMBRIDGE UNIVERSITY PRESS.

COLLEGE OF PRECEPTORS' EXAMINATIONS, JULY AND DECEMBER, 1900.

## THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

*Athenæum*.—"The Pitt Press Shakespeare can stand in competition with any of the numerous editions of the sort now showered upon reviewers."

*School World*.—"Every page shows careful scholarship and a ripe literary judgment. It would be difficult to praise this work (or this series) too highly."

*Guardian*.—"Mr. Verity is an almost ideal editor of school texts."

**As You Like It.** 1s. 6d. With Introduction, Notes, Glossary, and Index, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge.

*Guardian*.—"Mr. Verity, the editor, has provided material for all sorts of students. For the beginner we have the notes and a reprint of Charles Lamb's outline of the story. For older readers we have copious extracts from Lodge's 'Rosalynde.' For the examinee, the etymologist, and the curious student, we have the glossary, the index of the important words and phrases, and the notes on metre and on the date and sources of the play. All of these aids evince patient research, accurate scholarship, and thoughtful judgment."

## CAMBRIDGE MILTON FOR SCHOOLS.

*Guardian*.—"This edition will, we feel sure, long continue to be the standard school text of 'Paradise Lost.'"

**Paradise Lost, Books III. and IV.** Edited, with Introduction and Notes, by A. W. VERITY, M.A. 2s.

## PITT PRESS SERIES.

AUTHOR.	WORK.	EDITOR.	PRICE.
<b>Macauley</b> .....	Lays of Ancient Rome (with Ivry and The Armada) .....	J. H. Flather .....	s. d. 1 6
<i>School World</i> .—"In thorough keeping with the other volumes of this series, an evidence of patient labour, and no mean tribute to Macauley himself. . . . The notes are brief and pointed, and two useful maps are appended. The introduction is brief, but exceedingly well done."			
<b>Scott</b> .....	Marmion .....	J. H. B. Masterman..	2 6
<i>Guardian</i> .—"Far and away the best school edition of the poem we have seen; and it will be difficult, probably impossible, to improve on it."			
<b>Scott</b> .....	Lay of the Last Minstrel .....	J. H. Flather .....	2 0
<i>Guardian</i> .—"It is one of the very best edited school-texts ever placed before the public."			
<b>Caesar</b> .....	De Bello Gallico, Books IV.-V. (Subject, Book V.) .....	A. G. Peskett .....	1 6
" .....	De Bello Gallico, Book VI. ....	" .....	1 6
<b>Cicero</b> .....	De Senectute .....	J. S. Reid .....	3 6
<b>Horace</b> .....	Odes, Book III. ....	J. Gow .....	2 0
<b>Livy</b> .....	Book XXII. ....	M. S. Dimsdale .....	2 6
<b>Vergil</b> .....	Aeneid, Books VI. and XII. ....	A. Sidgwick .....	each 1 6
<b>Euripides</b> .....	Medea .....	C. E. S. Headlam .....	2 6
<b>Lucian</b> .....	Menippus and Timon .....	E. C. Mackie .....	3 6
<b>Xenophon</b> .....	Anabasis, Books III. and V. ....	A. Pretor .....	each 2 0

## A NEW FRENCH VERSE READER.

**A Primer of French Verse for Upper Forms.** Edited by FREDERIC SPENCER, Professor of the French Language and Literature in the University College of North Wales; formerly Chief Master of the Modern Side in the Leys School, Cambridge. 3s.

*Guardian*.—"A really valuable contribution to the list of French school books." *Educational Times*.—"The rules are well expressed, and it may confidently be said that a pupil who has read this book with care will acquire an insight into French prosody such as no other 'primer' could give him, and will feel that this is a book to which he can always turn again with pleasure."

*Morning Post*.—"Professor Spencer's little collection of French verse should do much to cultivate an appreciation of French rhythm and poetic thought. Only the English teacher can make a selection of French verses which will appeal to our insular youth. Professor Spencer has certainly made such a selection."

## CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

General Editor—W. H. WOODWARD, of Christ Church, Oxford, Principal of University (Day) Training College, Liverpool, and Lecturer on Education in Victoria University.

*Specially suited for candidates for Queen's Scholarship Examinations, December, 1900, and Certificate Examinations, July, 1900.*

**A Short History of the Expansion of the British Empire, 1500-1870.** By WILLIAM H. WOODWARD. With Maps. Crown 8vo, cloth, 4s.; cloth, extra, gilt top, 5s.

*Athenæum*.—"Thoroughly to be recommended."

*Ball Mall Gazette*.—"Mr. Woodward tells this story in *usum scholarum* in an altogether admirable manner."

*School World*.—"It is full of wisdom applicable to our own day."

*Ball Mall Gazette*.—"In spite of the severe compression necessary the book is thoroughly interesting, and leaves one with clear ideas and a thirst for more. The maps, chronological table, and summary of British possessions are excellent."

## CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

*School Guardian*.—"Exact and scholarly, and at the same time simple, text-books. The University Press are to be congratulated upon having secured as editors such eminent scholars; their names are a guarantee of their work. These text-books will find their way into numberless preparatory schools and lower forms of public schools; they deal so thoroughly and clearly with the subject in each case that nothing better could be desired by master or pupil. Among others, there is this immense advantage: each volume is its own note-book and dictionary; the student, however elementary his knowledge, needs only the book in hand and a simple grammar."

The following editions have COMPLETE VOCABULARIES.

AUTHOR.	WORK.	EDITOR.	PRICE.
<b>Caesar</b> .....	De Bello Gallico, Books V. and VI. ....	E. S. Shuckburgh ...	each 1 6
<b>Vergil</b> .....	Aeneid, Books VI. and XII. ....	A. Sidgwick .....	1 6
<b>Xenophon</b> ...	Anabasis, Books III. and V. ....	G. M. Edwards .....	1 6

\* \* *Cambridge Editions of Caesar, Vergil, and Xenophon.*—The attention of Schoolmasters is called to the fact that there are now two editions of some of the works of these authors in the *Pitt Press Series* and the *Cambridge Series for Schools and Training Colleges*. The Editions in the *Cambridge Series for Schools and Training Colleges* have Complete Vocabulary. If, in ordering, the Edition required is not specified, the *Pitt Press Edition*, without vocabulary, will be sent.

## ENGLISH GRAMMAR.

New and Enlarged Edition (Thirty-sixth to Forty-fifth Thousand).

**The Elements of English Grammar.** By A. S. WEST, M.A., Trinity College, Cambridge. Fcap. 8vo, 2s. 6d.

*Prefatory Note to the Enlarged Edition.*—Some hundreds of additional Questions and Examples are given in the present edition, and in a few places the wording of the text has been altered. The numbers of the paragraphs remain the same.

*School World*.—"The larger work shows a master hand. It is adapted to the higher forms, and its historical survey contains just what is wanted for examination purposes. . . . Both books deserve a large sale."

**An English Grammar for Beginners.** By A. S. WEST, M.A. 1s.

*School World*.—"The smaller of these two works ought to be extensively used for the teaching of junior forms. Its matter is arranged with the greatest care, its explanations are full and easily adapted to juvenile intelligences. . . . Altogether the book is worthy of high commendation."

**Demonstrations in Greek Iambic Verse.** By W. H. D. ROUSE, M.A., formerly Fellow of Christ's College, Cambridge; a Master at Rugby School. Crown 8vo, 6s.

*Athenæum*.—"Mr. Rouse has written with care and judgment, and his work ought to be decidedly useful to teachers."

*Literature*.—"In many ways an improvement on the work of predecessors in the same field. . . . The exercises are singularly exhaustive and lucid, and the book will be of great service to composition masters and their pupils."

*Academy*.—"A first-rate book."

*Educational Times*.—"We hope that this book will find its way into the hands of many teachers, to the certain benefit both of themselves and of their pupils."

*School World*.—"This is a good book, which should be obtained by every classical master."

*Bookman*.—"An excellent manual for the student, offering both precept and example, both the result of years of experience and labour."

**Geometrical Drawing, With Notes and Examples. Part I.** Plane and Elementary Solid. By W. H. BLYTHE, M.A., Jesus College. 2s. 6d.

*Extract from Preface.*—"This book is intended for Candidates reading Geometrical Drawing for the Science and Art Department, South Kensington, Elementary Stage, for entrance to Sandhurst and Woolwich, and for the Cambridge Preliminary and Junior Local Examinations."

"Part I. contains Plane Geometrical Drawing and Solid Geometry so far as it is included in the Syllabus, Geometrical Drawing (Art), Subject 1 A, page 231, Science and Art Directory, 1899."

**The Formation of Character:** some Educational Aspects of Ethics. By JOHN M'CUNN, Balliol College, Oxford; Professor of Philosophy in University College, Liverpool. [Nearly Ready.]

**Outlines of the History of the English Language.** By T. N. TOLLER, late Fellow of Christ's College, Cambridge; Professor of English in the Owens College, Manchester. [Nearly Ready.]

# CLASS LIST

## OF PUPILS WHO HAVE PASSED THE CHRISTMAS EXAMINATION OF THE COLLEGE OF PRECEPTORS.

[Throughout the following List, bracketing of names implies equality.]

### PRIZES.

- General Proficiency.**
- Quine, A. E. (Isbister Prize.) Mr. Heys, Elmfield College, York.
  - Dunham, Miss A. G. (Pinches Prize.) Misses Sell and Harry, Gartlet, Watford.
  - Fry, Miss B. Miss Bowen, Red Maids' School, Bristol.
  - Inkster, R. L. Mr. Oakes, Oakes Institute, Walton, Liverpool.
- Classics.**
- Quine, A. E. Mr. Heys, Elmfield College, York.
  - Charles, Miss D. S. Private tuition.
- Mathematics.**
- Inkster, R. L. Mr. Oakes, Oakes Institute, Walton, Liverpool.
  - Evans, W. D. Mr. Rider, Devonport High School.
- English Subjects.\***
- Steward, G. E. Mr. Bayley, Wellington College, Salop.
  - Dunham, Miss A. G. Misses Sell and Harry, Gartlet, Watford.
  - Howell, H. F. Mr. Bayley, Wellington College, Salop.

\* Lady Gwendolen Onslow, Private tuition, was disqualified for the First Prize for English Subjects in consequence of being over 18 years of age at the commencement of the Examination.

- Modern Foreign Languages.\***
- Charles, L. S. Mr. Hawe, High School for Boys, Croydon.
  - Richards, A. H. Mr. Richards, Stoke Newington Grammar School.
- Natural Sciences.**
- Quine, A. E. Mr. Heys, Elmfield College, York.
  - Holden, J. Mr. Heys, Elmfield College, York.
- Taylor-Jones Prize for Scripture History.**
- Wallis, Miss E. H. Miss Holgate, Guelph College, Clevedon.
- Pitman Medals for Shorthand.†**
- Evans, W. D. (Silver Medal.) Mr. Rider, Devonport High School.
- (Faulkner, P. L. Mr. Cusack, the Cusack Institute, Moorfields.)
- (Wraight, B. W. Mr. Nixon, High School, Romford.)
- (Bronze Medals.)

\* Lady Gwendolen Onslow, Private tuition, was disqualified for the First Prize for Modern Foreign Languages, and Miss I. Y. Craig, Manchester High School for Girls, was disqualified for the Second Prize for Modern Languages, in consequence of being over 18 years of age at the commencement of the Examination.

† A. S. Hurst, Private tuition, was disqualified for the Silver Medal for Shorthand in consequence of being over 18 years of age at the commencement of the Examination.

### List of the Candidates who were FIRST and SECOND in each Subject of Examination.

GENERAL CLASS LIST—BOYS.

N.B.—The small italic letters denote that the Candidate to whose name they are attached was distinguished in the following subjects respectively:—

- a. = Arithmetic.
al. = Algebra.
b. = Botany.
bk. = Bookkeeping.
ch. = Chemistry.
d. = Drawing.
do. = Domestic Economy.
e. = English.
el. = Electricity.
eu. = Euclid.
f. = French.
g. = Geography.
geo. = Geology.
ge. = German.
gr. = Greek.
h. = History.
he. = Hebrew.
i. = Italian.
l. = Latin.
m. = Mechanics.
ms. = Mensuration.
mu. = Music.
nh. = Natural History.
p. = Political Economy.
ph. = Physiology.
s. = Scripture.
sl. = Sound, Light, and Heat.
sh. = Shorthand.
sp. = Spanish.
st. = Trigonometry.
tr. = Welsh.
z. = Zoology.

The small figures 1 and 2 prefixed to names in the Second and Third Class Lists denote that the Candidates were entered for the First and Second Classes respectively.

In the addresses, Acad. = Academy, C. or Coll. = College, Coll. S. = Collegiate School, Comm. = Commercial, End. = Endowed, Found. = Foundation, H. = House, Inst. = Institute, Int. = International, Inter. = Intermediate, Prep. = Preparatory, S. = School, Tech. = Technical, Univ. = University.

First Class.—Honours Division.

Carter, R. 36 Glengarry Rd., E. Dulwich  
 Jopling, E.S.  
 Woolston Ladies' C., Southampton  
 Miners, M.J. Guilford High S., W.C.  
 Row, K.D.E. Devonport High S.  
 Thacker, M. Powerscroft, S. Woodford  
 Trevitt, M.G. Windsor High S., Liverpool

NAMES OF CANDIDATES IN THE ABOVE LISTS WHO HAVE PASSED THE ORAL EXAMINATIONS IN FRENCH AND GERMAN.

f = French. g = German.

BOYS.

Arthur, J.D. f. Oxenford H., Jersey  
 Bailey, J.B. f. Oakes Inst., Walton, Liverpool  
 Barber, E.H. f. Stoke Newington Gram. S.  
 Bartholomew, E.E. f.  
 Holme Wood Coll., Up. Tulse Hill  
 Benn, P.E. f. Private tuition  
 Blampied, S. f. St. James' Coll. S., Jersey  
 Cabot, T.A. f. Oxenford H., Jersey  
 Cahen, L. f. St. John's Coll., Green Lanes, N.  
 Charles, L.S. f. g. High S. for Boys, Croydon  
 Davies, A.L. f. g. High S. for Boys, Croydon  
 Davies, G.M.D. f. High S. for Boys, Croydon  
 Dezoustre, A. f. g. Catford Coll. S., S.E.  
 Duncan, N.A. g. Stoke Newington Gram.S.

Evans, R.H.B. f. Oakes Inst., Walton, L'pool  
 Faulkner, P.L. f. The Cusack Inst., Moorfields  
 Gill, G.H. f. Private tuition  
 Goldberg, J. f. Tivoli H., Gravesend  
 Guzel, A. f. Battersea Polytechnic S.  
 Hamilton, G.W. f. Oakes Inst., Walton, L'pool  
 Hedley, J.S. f. Newcastle Modern S.  
 Hillman, H.A.M. f. High S. for Boys, Croydon  
 Horman, F. f. Oxenford H., Jersey  
 Inkster, R.L. f. Oakes Inst., Walton, L'pool  
 Jenne, H.H. f. High S. for Boys, Jersey  
 LeBrun, J.R. f. St. James' Coll. S., Jersey  
 LeCornu, J.F. f. Oxenford H., Jersey  
 Lucas, J. f. Oxenford H., Jersey

Luce, G.P. f. Oxenford H., Jersey  
 Malzard, F.J. f. Salvandy Ter. S., Jersey  
 Manger, P.V. f. Oxenford H., Jersey  
 Merton, H.M. g. Univ. S., Herne Bay  
 Neill, W.A.H. f. Oxenford H., Jersey  
 Nicholls, G.H. f. g. Stoke Newington Gram. S.  
 Nicolle, C.B. f. St. James' Coll. S., Jersey  
 Oakes, C. f. Oakes Inst., Walton, Liverpool  
 Parkinson, G.S. f. Bath Coll.  
 Patterson, W. f. Newcastle Modern S.  
 Piquet, C.J. f. Oxenford H., Jersey  
 Piroquet, A.N. f. Oxenford H., Jersey  
 Potter, A.J. f. g. Stoke Newington Gram. S.

Richards, A.H. f. g. Stoke Newington Gram.S.  
 Samuel, W.S. f. Maida Vale S., W.  
 Smith, C.E.H. f. Wellington Terr. S., Taunton  
 Smith, G. f. Oakes Inst., Walton, Liverpool  
 Tropewski, G. f. Tivoli H., Gravesend  
 Turpin, J.A. f. St. James' Coll. S., Jersey  
 Watson, W.R. f. Oakes Inst., Walton, L'pool  
 Welham, J.B. f. Private tuition  
 Weller, C. f. Bath Coll.  
 Wilenski, R.H. g. Private tuition  
 Maida Vale S., W.  
 Williams, A.E. f. g. Stoke Newington Gram.S.  
 Williams, S. f. High S. for Boys, Croydon  
 Woodrow, C. f. Private tuition

GIRLS.

Alcock, E.M. f. g.  
 Haddo & Westwood Coll. S., Scarborough  
 Bartlett, K.C. f. Private tuition  
 Brane, D.P. f. Harborne Ladies' Coll.  
 Brooks, K. f. Milton Mount Coll., Gravesend  
 Carouge, J.H. f. Private tuition  
 Cole, D.F. f. g. Coolhurst S., Crouch End  
 Cox, C. f. Milton Mount Coll., Gravesend  
 Craig, I.Y. f. g. Manchester High S. for Girls  
 Davies, L.A. f. g.  
 Southolme High S., Whalley Range

Dixon, F. f. Brookville, Filey  
 Dodd, C.H.M. f. Ellerslie Ladies' S., Bromsgrove  
 Gazel, L. f. Zelzah H., St. Heliers  
 Gordon-Cranmer, E.A. f. g.  
 George Green S., Poplar  
 Arundel H., Scarborough  
 Fry, B. f. Bristol  
 George Green S., Poplar  
 Hohl, M.E. g. Private tuition  
 Lorch, D. f. Clifton Lodge S., Lee

Marples, W.E. J. Treverbyn, Hornsey Lane, N.  
 Mayo, I.G.R. f. Lancelfield S., Southend  
 Moon, W. f. Milton Mount Coll., Gravesend  
 Murray, J.M. f. Private tuition  
 Mutton, C.M. f. 26 Ashley Rd., Hornsey Rise  
 Onslow, G.F.M. f. Private tuition  
 Pither, K. f. Milton Mount Coll., Gravesend  
 Porter, E.A. f. 26 Ashley Road, Hornsey Rise  
 Pulling, G.E. f. Salway Coll., Leytonstone

Reynolds, C.D. f. Guelph Coll., Clevedon  
 Robinson, C. f. g.  
 Haddo & Westwood C., Scarborough  
 Ruffell, F. f. Milton Mount Coll., Gravesend  
 Simpson, E.W. f. Arundel H., Scarborough  
 Southwell, A.B. f. g.  
 Trafalgar Sq. S., Scarborough  
 Taff, E.E. f. g. George Green S., Poplar  
 Vergette, N.F. f. 26 Ashley Road, Hornsey Rise  
 Weedon, L.A. f. George Green S., Poplar

JUNIOR FORMS EXAMINATION.—PASS LIST, CHRISTMAS, 1899.

BOYS.

Table listing names of boys and their respective schools, organized in three columns. Includes names like Abraham, E.S., Adams, A.E., and schools like Devizes Gram. S., Great Ealing S., Highfield S., etc.

BOYS, JUNIOR FORMS—Continued.

- Knowles, F.H. The College, Weston-s.-Mare  
 Knowles, J.W. Lancaster Coll., Morecambe  
 Lacey, L.H. Oxenford H., Jersey  
 Lang, F.H. Allerton H., Watford  
 Langlois, P. High S. for Boys, Jersey  
 Langstone, H. Westfield H., Reading  
 Larke, A.J. Stoke Newington Gram. S.  
 Lathbury, C.L. Highfield S., Chertsey  
 Latter, R. Crompton S., Southend  
 Lawrence, H.C. Highfield S., Chertsey  
 Lawry, T. St. Austell S.  
 Learmonth, A. Kilgrimol S., St. Annes-on-Sea

Estimates given for completely Furnishing Schools.

# CHARLES GRIFFIN & CO.'S PUBLICATIONS.

## SCIENTIFIC.

**THE FLOWERING PLANT:** First Principles of Botany. By Prof. J. R. AINSWORTH DAVIS, M.A., F.Z.S., University College, Aberystwyth. Very fully Illustrated. Third Edition, Revised and Enlarged. With an additional chapter on FERNS and MOSSES. 3s. 6d.

"It would be hard to find a text-book which would better guide the student to an accurate knowledge of modern discoveries in botany."—*Journal of Botany*.

**THE MAKING OF A DAISY; "WHEAT OUT OF LILIES":** and other Studies in Plant Life and Evolution. A Popular Introduction to Botany. By ELEANOR HUGHES-GIBB. With Illustrations. Crown 8vo, gilt, 2s. 6d., post free.

"A bright little introduction to the study of flowers."—*Journal of Botany*.

**HOW PLANTS LIVE AND WORK.** A Simple Introduction to Real Life in the Plant World, based on Lessons originally given to Country Children. By ELEANOR HUGHES-GIBB. With Illustrations. Crown 8vo, cloth, 2s. 6d.

"Well calculated to make the study of botany attractive."—*Scotsman*.

**OPEN-AIR STUDIES IN BOTANY:** Sketches of British Wild Flowers in their Homes. By R. LLOYD PRAEGER, B.A., M.R.I.A. Illustrated by Drawings from Nature, and Photographs. Handsome cloth, 7s. 6d.; gilt, 8s. 6d., post free.

"A fresh and stimulating book."—*Times*.

**OPEN-AIR STUDIES IN GEOLOGY:** An Introduction to Geology Out of Doors. By GRENVILLE A. J. COLE, M.R.I.A., F.G.S. With 12 Full-page Plates after Photographs, and Illustrations. Handsome cloth, 8s. 6d., post free.

"A charming book . . . beautifully illustrated."—*Athenaeum*.

**PRACTICAL GEOLOGY, AIDS IN.** By Prof. GRENVILLE COLE, F.G.S., Royal College of Science for Ireland. With numerous Illustrations. Third Edition, Revised. Crown 8vo, 10s. 6d.

"Prof. Cole treats of the examination of minerals and rocks in a way that has never been attempted before."—*Athenaeum*.

**SOUND.** Forming an instalment of an important work entitled *A Text-book of Physics*. By J. H. POYNTING, Sc.D., F.R.S., and J. J. THOMSON, M.A., F.R.S., Hon. Sc.D. Dublin, Hon. D.L. Princeton. With Illustrations. Handsome cloth, 8s. 6d.

"Will serve as an introduction to the most abstruse treatises."—*Scotsman*.

**METALLURGY (An Elementary Text-book).** By Prof. HUMBOLDT SEXTON, F.I.C., Professor of Metallurgy in Glasgow and West of Scotland Technical College. With numerous Illustrations. Second Edition, Revised, 6s.

"Possesses the great advantage of giving a course of practical work."—*Mining Journal*.

## CLASSICAL AND LITERARY.

**GREEK ANTIQUITIES, A MANUAL OF.** For Students and General Readers. By PERCY GARDNER, M.A., D.Litt., Professor of Classical Archaeology and Art, Oxford University; and F. B. JEVONS, M.A., Litt.D., Principal of Bishop Hatfield's Hall, Durham University. Second Edition. Handsome cloth, 16s.

"Fresh, thoughtful, and cleverly arranged."—*Academy*.

**ROMAN ANTIQUITIES, A MANUAL OF.** By WILLIAM RAMSAY, M.A., late Professor of Humanity, Glasgow University. Revised and Edited by RODOLFO LANCIANI, D.C.L. Oxon., LL.D., &c., Professor of Classical Topography in the University of Rome. Sixteenth Edition. 10s. 6d.

"It is the best and handiest guide yet produced."—*Athenaeum*.

**ROMAN ANTIQUITIES (Elementary).** By Prof. RAMSAY. With numerous Illustrations. Ninth Edition. 4s.

**A HISTORY OF GREEK LITERATURE.** From the Earliest Period to the Death of Demosthenes. By FRANK B. JEVONS, M.A., D.Litt., Principal of Bishop Hatfield's Hall, in the University of Durham. Second Edition. Cloth, 8s. 6d.

"The best history of Greek literature hitherto published."—*Spectator*.

**A HISTORY OF ROMAN LITERATURE.** By the Rev. C. T. CRUTTWELL, M.A., Hon. Canon of Peterborough Cathedral. From the Earliest Period to the Times of the Antonines. Sixth Edition. 8s. 6d.

"Full of good scholarship and good criticism."—*Athenaeum*.

**SPECIMENS OF ROMAN LITERATURE FROM THE EARLIEST PERIOD TO THE TIMES OF THE ANTONINES.** Third Edition. Edited by C. T. CRUTTWELL, M.A., and PEAKE BANTON, M.A. Part I.—ROMAN THOUGHT: Religion, Philosophy and Science, Art and Letters. 6s.

Part II.—ROMAN STYLE: Descriptive, Rhetorical, and Humorous Passages. 5s. Or, in one Vol., with Synopsis and Indices, complete, 10s. 6d.

"A work not only useful, but necessary."—*Saturday Review*.

**A HISTORY OF ENGLISH LITERATURE AND OF THE ENGLISH LANGUAGE.** From the Norman Conquest. With numerous Excerpts and Specimens. By GEORGE LILLIE CRAIK, LL.D., late Professor of History and English Literature, Queen's College, Belfast. New Edition. In Two Vols., royal 8vo, cloth, 25s.

"A more than usually agreeable book."—*Times*.

**A MANUAL OF ENGLISH LITERATURE.** For the use of Colleges, Schools, and those preparing for Competitive Examinations. With an Appendix on Recent Literature, by Sir H. CRAIK, K.C.B., M.A., LL.D. From the larger work by Dr. CRAIK. Eleventh Edition. Crown 8vo, cloth, 7s. 6d.

"Needs no recommendation."—*The Spectator*.

LONDON: CHARLES GRIFFIN & CO., LTD., EXETER STREET, STRAND.

*Small crown 8vo, bound in cloth, price 2s. 6d.*

## A MANUAL OF ESSAY WRITING.

For Colleges, Schools, and Private Students.

By J. H. FOWLER, M.A.,

Assistant-Master at Clifton College.

"Schoolboys will be the wiser and the better for reading Mr. J. H. Fowler's little manual on 'Essay Writing.'"—*Literature*.

"The book, altogether, is one of conspicuous merit, and cannot fail to be warmly welcomed by those engaged in the teaching of such dilligently as this is universally acknowledged to be."—*Educational News*.

"The directions he gives are admirable, and the notes in Part II. possess the great merit of suggestiveness."—*Public School Magazine*.

"This is a distinctly helpful book. . . . We heartily commend the book to the notice of students preparing for all higher standard examinations at which an essay is required."—*University Correspondent*.

"This is the best handbook of the sort for advanced pupils that we remember to have seen. . . . Under such guidance the essay becomes in its measure an exercise in the art of literature."—*Educational Record*.

"The best book of its kind which has fallen into our hands yet. It is practical and lucid, and contains useful appendices of notes and subjects for essays."—*Educational Review*.

"Mr. J. H. Fowler's 'Essay Writing' may be unreservedly recommended for the higher forms in public schools, and for teachers of composition of all grades. The author's aims are high, his method of handling his subject is dignified as well as practical, and his book offers in itself an excellent example of that clearness of thought, sobriety of judgment, and purity of style which he wishes to aid his readers to attain. The duties of a composition master are not—according to Mr. Fowler's conception of them—limited to the development in his pupils of a certain facility for spinning out a meagre stock of ideas in language grammatically correct, and possessing a certain shallow fluency and sparkle; his aim should be to make the writing of an essay an occasion for the acquisition of ideas, the widening of knowledge, the cultivation of habits of research, and the exercise of individual thought and critical judgment. The earnestness and skill with which Mr. Fowler develops this idea constitute the chief claim of his work to consideration, and raise it head and shoulders above any other text-book on composition which we have seen."—*Guardian*.

missory Notes and Drafts. 6. Bills of Exchange.

No. II. Day-Book and Cash-Book.

No. III. Ledger, Index, and Balance Sheet.

## COLLEGE OF PRECEPTORS.

## Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

## INTELLECTUAL EDUCATION.

To be delivered by JAMES SULLY, M.A., LL.D., Grote Professor of the Philosophy of Mind and Logic at University College, London.

## SYLLABUS.

I.—Education in its relation to Natural Development—Historical Evolution of the Idea of Education—Different Aspects of Educational End: Fullness of Individual Development, Fitness for Life, Readiness for the Social State and the Duties of Citizenship—Respective Functions of Parent, State, and Teacher, in Education—Claims of the Home, of the Child's World, and of the Child's Inner Self—Relation of Education to Social Conditions, to the Spirit of the Age, and to Progress.

II.—Intellectual Education in its relation to Education as a Whole—General Value of the Intellectual Side of Man—Gradual Evolution of the End of Intellectual Education: from Practical Skill (the End of Savage Training) to Intelligence—Conflict of Ideas of different stages of Culture in Contemporary Discussions: Useful Knowledge *versus* Culture—The True Standard of "Knowledge-Values"—What a Cultivated Intelligence includes—In what sense Intelligence can exist in a Child.

III.—The Process of Mental Development—Growth of Intelligence or Gradual Storage and Assimilation of Material—The Part of Feeling and of Effort in Intellectual Development—The Organic Base of Intellectual Progress: the Efficiency of Sense-Organs, Muscles, and Brain—First Movements of Intelligence in the Child's own World (Play), and in the Search for Facts and Explanations—The Problem of the Young Child's Curiosity—The Too Much and the Too Little in the way of the Growth-up's Stimulation of the Growing Intelligence.

IV.—(1) Intellectual Education begins by a Primary Presentation of Sense Material—The Wakefulness of the Early Senses—Animal and Human Senses compared—The Importance of the Finer Exercises of Eye, Ear, and Hand—Interest of Children in the Report of the Senses—Interest and Value of a Testing of the Senses—Over-training of the Senses.

V.—A Child's Interest is in Things rather than in Sensations—The Attitudes of Child and Animal towards the World of Objects—The Charm of the Ever Unfolding New—The Gradual Evolution of Interests and their Effect on Attention and Inquiry—The Teacher's Function in relation to young half-formed Interests—What Awakening an Interest means—The Place of Sturdy Effort in the Growth of Interests.

VI.—The Progressive Examination of Things by the Child—First, "General" Impressions, and, later, Full and Concrete ones—The Minds that "stick" at General Impressions—What Education can do to take the Young Mind beyond these—Methodical Analysis of Presentations and its Difficulties—Error of plunging Child into the Abstractions of "Qualities" and "Relations"—Illustrations from the Teaching of Form and of Drawing.

VII.—The Relation of Observation to Assimilation of Sense-Presentations—Interest in Objects includes Impulse to Assimilate—The Lower Kind of Animal Assimilation: Recognition—Assimilation as Expansive, and as Mastering the New through its relation to the Old—True and False Conception of Apperception—The Apperceptive Attitude and its relation to the Store of Impressions—The Aim of Object Teaching as the Development of right Apperceptive Attitudes.

VIII.—The Way in which the Inner Store of Ideas grows into an ordered Multiplicity—Observation and Memory—The Child who Sees and Forgets—Associative Grouping of Ideas—Apperceptive Systems as the Beginning of Organized Knowledge—Types of Associative Grouping: the Mind for Particulars and Details, and the Mind for Generalities and Relations—The Exercise of the Memory as Training in Exactness—Errors of Childish Reproduction, Single and Recurring, and the way to deal with them.

IX.—The Psychology of Language as affecting Processes of Instruction—General Function of Names and of Articulated Language in the Growth of Intelligence—The Seer and the Namer of Things—Language as fixing the Results of Methodical Observation—The Need of Language in carrying out an orderly Arrangement of Ideas—The Teacher's Problem of selecting Fitting Language, and of insisting on its Accurate Reproduction—Language as a Fetish and as an Object of Contempt in Teaching.

X.—(2) Secondary Presentation of Intellectual Material through the medium of Language—The Aim and Process of Verbal Instruction, pure and simple—Words as Abstract Symbols, and as contributing to the Formation of Images—The Apperceptive Process in following Verbal Instruction—The Teacher must excite the Learner at once to a Reproduction of Ideas and to a further Elaboration of these—Different ways in which a Child's Mind may go wrong here—How a Child thinks of the Desert—How the Skilled Teacher keeps in touch with the Imaginative Movement of his Pupils' Minds.

XI.—The Name as Instrument of Thought—Transition from Image to General Idea—How a Child represents a Class of Things and their Qualities and Relations—The Problem of Thought-Training—The Child to rise above the Particular and yet to hold fast to Particulars—The Value of Judicious Presentation of Examples—When and how Definitions are to be reached.

XII.—Thought as an Articulated setting forth of Relations—Comparison of Primitive and Cultured Forms of Language—Grown-up Language as the Child's Burden—Meaning of the Rule "From the Indefinite to the Definite"—Early Exercises in Reasoning—The Stimulation and Restraint of Thought—How to deal with the Backward and the too Forward Reasoner.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\* \* \* The Lectures will be delivered on THURSDAY EVENINGS at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

## Oliver &amp; Boyd's Educational Books.

## LECTURES ON LANGUAGE AND LINGUISTIC METHOD IN THE SCHOOL.

Delivered in the University of Cambridge, Easter Term, 1889, by S. S. LAURIE, A.M. Ed., LL.D. St. Andrews, Professor of the Institutes and History of Education in the University of Edinburgh. Third Edition. 4s.

By the same Author. Second Edition, Revised. Price 6s. 6d.

## INSTITUTES OF EDUCATION.

Comprising an Introduction to National Psychology.

Just published. Price 3s. 6d.

## ELEMENTARY TRIGONOMETRY.

By A. J. PRESSLAND, M.A., F.R.S.E., sometime Scholar of St. John's College, Cambridge, Mathematical Master at the Edinburgh Academy; and CHARLES TWEDDIE, M.A., B.Sc., F.R.S.E., Mathematical Lecturer and Assistant Professor, University of Edinburgh.

"It is a pleasure to read a book so well planned and so thoughtfully written as this. It differs widely from most English manuals of the subject."—*Journal of Education*.

## PRACTICAL PLANE &amp; SOLID GEOMETRY.

By JAMES RIDDEL, Headmaster of the Art School, Heriot-Watt College, Edinburgh. With numerous Exercises and Examination Questions. 2s.

Specially adapted for Science and Art Classes and the Elementary Stage of Practical Plane and Solid Geometry, Science Subject No. 1.; also for Government Examinations and the Elementary Stage of Geometrical Drawing.

"A very reliable and thorough manual."—*School Guardian*.

## THE PRINCIPLES OF FRENCH GRAMMAR.

With numerous Exercises. By CHARLES S. LE HARIVEL, ancien Professeur de la Ville de Paris, Lecturer on French at the Moray House Training College, Edinburgh, &c. 2s. 6d.

"A simple and well-graded exposition of French grammar, illustrated at every step by practical exercises, and supplemented by a vocabulary, which makes the book self-contained and suitable for study without recourse to a dictionary."—*Scotsman*.

\* \* \* KEY to the GRAMMAR for Teachers only, 2s. 6d.

By the same Author.

## ELEMENTARY FRENCH GRAMMAR. 1s.

## THE CHILD'S FRENCH GRAMMAR.

By CLARA A. FAIRGRIEVE (Diplômée), Teacher of French in George Watson's Ladies' College, Edinburgh. Price 8d.

974 pages, reduced to 3s. 6d., bound.

## SURENNE'S PRONOUNCING FRENCH AND ENGLISH DICTIONARY.

A special feature is that the Pronunciation is shown by a different spelling.

Attention is requested to this extremely cheap issue.

## SURENNE'S FRENCH AND ENGLISH DICTIONARY.

- III. THE MINERAL KINGDOM. Set of 14 Cards in Box. 21s.

OLIVER & BOYD, Edinburgh.

SIMPKIN, MARSHALL, HAMPTON, & Co., Limited, London.

# THE WARWICK SHAKESPEARE.

General Editor—Professor C. H. HERFORD, Litt.D.,

Trinity College, Cambridge; Professor of English at University College, Aberystwyth.

THE WARWICK SHAKESPEARE is now so generally known and widely used that a detailed description of the series is superfluous. It is acknowledged to be “*infinitely superior to any other school edition.*” Of the latest volume (“Henry VIII.”), *THE ATHENÆUM* says:—“Compiled with extreme care and pains and with that fullness of annotation and attention to ‘æsthetic’ comment to which we are accustomed in the ‘Warwick Shakespeare.’”

To the whole series may be applied the verdict of *THE ACADEMY* upon “A Midsummer Night’s Dream”: “In brief, here is an edition to be unreservedly recommended.”

*The Publishers will be pleased to entertain applications for Specimen Copies.*

## VOLUMES SET FOR EXAMINATIONS, 1900, 1901.

**AS YOU LIKE IT.** Edited by J. C. SMITH, M.A. (Edin.), B.A. (Oxon.), formerly Exhibitor of Trinity College, Oxford; late Rector, Stirling High School. 1s. 6d.

ABERDEEN UNIVERSITY LOCALS, 1900.  
QUEEN’S SCHOLARSHIP, 1900.  
QUEEN’S CERTIFICATE (SCOT.), 1901.

**THE TEMPEST.** Edited by F. S. BOAS, M.A., formerly Exhibitor of Balliol College, Oxford; Lecturer, Oxford Society for the Extension of University Teaching. 1s. 6d.

TEACHER’S CERTIFICATE (SECOND YEAR), 1900.  
EDINBURGH UNIVERSITY M.A. (PASS), 1900.

**THE MERCHANT OF VENICE.** Edited by H. L. WITHERS, B.A., Principal of Isleworth Training College, London. 1s. 6d.

ABERDEEN UNIVERSITY JUNIOR LOCALS, 1900.

**TWELFTH NIGHT.** Edited by ARTHUR D. INNES, M.A., formerly Scholar of Oriol College, Oxford. 1s. 6d.

ST. ANDREWS UNIVERSITY M.A., 1900.

### REMAINING VOLUMES OF THE SERIES—

**CYMBELINE.** Edited by A. J. WYATT, M.A. Cantab. et Lond. 1s. 6d.

**HENRY THE FIFTH.** Edited by G. C. MOORE SMITH, M.A., formerly Scholar of St. John’s College, Cambridge; Professor of English at the Fifth College, Sheffield. 1s. 6d.

**KING JOHN.** Edited by G. C. MOORE SMITH, M.A., Editor of “Henry the Fifth.” (In preparation.) 1s. 6d.

**MACBETH.** Edited by EDMUND K. CHAMBERS, B.A., formerly Scholar of Corpus Christi College, Oxford; Chancellor’s English Essayist, 1891. 1s.

**RICHARD THE THIRD.** Edited by GEORGE MACDONALD, M.A., Balliol College, Oxford; former Classical Examiner in the University of Edinburgh. 1s. 6d.

*Other Volumes in Preparation.*

### OPINIONS OF THE PRESS.

**A MIDSUMMER NIGHT’S DREAM.**—“It is wonderfully rich in illustrative matter, and no aspect or interest of the play is neglected. In his treatment of chronological and historical questions, Mr. Chambers is modestly convincing and delightfully sane; two rare praises for Shakesperian scholars. In brief, here is an edition to be unreservedly recommended.”—*Academy*.

“One of the best of the ‘Warwick Shakespeare’ series, and contains a thorough and satisfactory exposition of the play.”—*Athenæum*.

**CORIOLANUS.**—“The most complete edition of ‘Coriolanus’ with which we are acquainted. Mr. Chambers’ essay on Shakesperian metre is not only painstaking and scholarly, but made unusually attractive by absence of pedantry and the sound sense of its arguments.”—*Guardian*.

**AS YOU LIKE IT.**—“Edited with great care and skill.”

—*Journal of Education*.

“The introductory matter and appendices are admirable.”—

—*University Correspondent*.

**HAMLET.**—“In an excellent series, this play seems to be specially well edited. Its appendices will give an intelligent student more than an inkling of what literature, literary history, and literary criticism mean.”—*Bookman*.

**RICHARD THE SECOND.**—“Professor Herford’s excellent edition.”—*Athenæum*.  
“Furnished with a glossary, many admirable historical and literary notes, and an introduction which leaves little on the score of lucid exposition and intelligent criticism to be desired. We have encountered few better works of the kind, and we heartily commend it on the score of common sense as well as of scholarship.”—*Speaker*.

**THE TEMPEST.**—“The editor shows considerable powers of delicate analysis and fine criticism. His introduction is a very subtle and sympathetic piece of work, and admirably written, to boot. The notes and similar apparatus are very accurate and sufficiently full. Mr. Boas keeps a judicious balance throughout between the respective claims of scholarship and of literary criticism proper.”—*Academy*.

“Of the good quality to which we are accustomed in the series.”—*Spectator*.

**HENRY THE FIFTH.**—“We have nothing but praise for the section on the Elizabethan theatre, or for the scholarship and critical ability displayed in the treatment of the play as a whole. No better edition could be found either for the class teacher or for the solitary student.”—*Athenæum*.

“The notes which are appended are unusually full and grapple with the real difficulties.”—*Speaker*.

**THE MERCHANT OF VENICE.**—“The introduction and notes alike are models of interpretation by suggestion as well as by clear, pointed exposition. We have seldom met with a school Shakespearian in which the writer has so completely succeeded in placing himself in the position of the intelligent student his book is designed to guide.”—*Educational Times*.

“One of the best small editions that we have seen. . . . What is not given in the introduction is given in the excellent notes, throughout which our attention is kept fixed on the play, its plot, and the persons who are concerned in it. The glossary is good and useful. We heartily recommend this edition.”—*Journal of Education*.

**RICHARD THE THIRD.**—“A very careful piece of work, done with special attention to the needs of students as practical experience has revealed them. There is a good appendix on the prosody of the play.”—*Academy*.

### A FEW OPINIONS AS TO THE SERIES IN GENERAL.

(1) “THE WARWICK SHAKESPEARE, the general scheme of which is now too well known to need any description from us.”—*Guardian*.

(2) “THE WARWICK SHAKESPEARE is one of the most desirable of annotated editions.”—*Academy*.

(3) “The series will be of exemplary value for purposes of tuition or study.”

—*Notes and Queries*.

(4) “This useful and comprehensive series.”—*University Correspondent*.

## UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A.

The Session began October, 3rd, 1899. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts student, £11. 1s.; ditto for Intermediate Science or Medical student, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (beginning September 19), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the Prospectus, apply to

JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar.

## Diploma Correspondence College.

The ONLY College that coaches SOLELY for

# A.C.P.,

# L.C.P., AND F.C.P.

SUCCESSES: 145 at A.C.P.; 20 at L.C.P.

Pupils under 12 years of age, £36 a year.

Pupils from 12 to 16, £46 a year.

Pupils over 16, £56 a year.

No extras. Resident Governesses.

Drawing, Painting, and Music taught by Visiting Masters.

Apply to the Principal, Miss MARY GROVER, Seaton, Devon.

## COUNTY INTERMEDIATE

SCHOOL, PRESTEIGN, RADNORSHIRE.—An ASSISTANT-MASTER is required for next term. Woodwork essential; ability to teach Vocal and Instrumental Music desirable. Salary £90. Apply to A. HOWARD SMITH, M.A., B.Sc., Headmaster.

MR. H. A. NESBITT (joint-author of "The Science and Art of Arithmetic," by A. SONNENSCHNIG and H. A. NESBITT, M.A.) has a few hours at his disposal for Lessons in Ladies' Schools in Mathematics, History, and Literature. Mr. Nesbitt also gives Lectures on the Teaching of Arithmetic.—16 South Hill Park Gardens, Hampstead, N.W.

FOR TEACHERS.—DEUTSCHER GERMANIST bietet sich zur ausführlichen sprachlichen und stilistischen Korrektur deutscher Aufsätze, Mässiges Honorar. Näheres—Dr. Phil. PETSCH, Würzburg (Bayern).

ARMY SCHOOLMASTERS.—There are a few vacancies in the Corps of Army Schoolmasters. Civilian Schoolmasters only will be accepted who have passed on second year's papers in the First or Second Division, or who hold a certificate, qualifying them to superintend pupil teachers, from the Committee of Council on Education. Students in Training Colleges will also be accepted under certain conditions. Candidates must not be over twenty-four years of age. Further particulars can be obtained on application, in writing, to the DIRECTOR OF ARMY SCHOOLS, War Office, London, S.W.

HIGH SCHOOL, STAMFORD, NORTHANTS.

BOARDERS are received by the Headmistress, Miss L. M. MONRO. Separate cubicles. Music excellent. Terms on application.

## BEDFORD COLLEGE, LONDON (FOR WOMEN).

YORK PLACE, BAKER STREET, W.

ENTRANCE SCHOLARSHIPS.

One Reid Scholarship in Arts, annual value £31. 10s., tenable for three years; one Pfeiffer Scholarship in Science, annual value £48, tenable for three years, will be awarded on the results of the Examination to be held in the College on June 26th and 27th.

Students are prepared for all the University of London Examinations in Arts and Science. Lectures are given in all branches of General and Higher Education. Six Laboratories are open for Practical Work.

STUDENTS CAN RESIDE IN THE COLLEGE.

Prospectus and all particulars on application to the PRINCIPAL.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss M. PUNNETT, B.A. (Lond.).

The object of this College is to give a professional training to educated women who intend to teach. In addition to the course of training, it offers the advantages of a College life and one year's residence in Cambridge.

The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers, and are prepared for the Cambridge Teachers' Certificate (Theory and Practice). Ample opportunity is given for practice in teaching science, languages, mathematics, and the other usual school subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

THE

## FROEBEL EDUCATIONAL INSTITUTE,

TALGARH ROAD, WEST KENSINGTON, LONDON, W.

Chairman of the Committee—MR. W. MATHER.

Secretary—MR. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

Principal—Madame MICHAELIS.

Mistress of Method—Miss E. E. LAWRENCE.

KINDERGARTEN AND SCHOOL.

Headmistress—Miss M. BOYS SMITH.

Further particulars may be obtained on application to the PRINCIPAL.

## ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS IN SECONDARY SCHOOLS AND IN FAMILIES.

—This College provides a complete Course of Professional Training for Women Teachers, in preparation for the Cambridge Teachers' Certificate. The Course includes attendance at the University, Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class-Teaching in Schools. Four Heriot Bursaries of £30 are offered in October. Apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

## ROYAL INDIAN ENGINEERING

COLLEGE, COOPERS HILL, STAINES.—The Course of Study is arranged to fit an Engineer for employment in Europe, India, and the Colonies. About 40 Students will be admitted in September, 1900; the Secretary of State will offer them for competition Twelve Appointments as Assistant Engineers in the Public Works Department, and Three Appointments as Assistant Superintendents in the Telegraphs Department, and One in the Accounts Branch P.W.D. For particulars apply to SECRETARY at College.

## CORRESPONDENCE TUITION,

Classes, or Private Lessons in all Subjects for all Examinations, &c., at moderate fees. Correspondence courses arranged to suit needs of individual pupils. Many recent successes.—F. J. BORLAND, L.C.P. (Science and Math. Prizeman), Victoria College, 87 Buckingham Palace Road, S.W., and Stalheim, Brunswick Road, Sutton, Surrey. Schools visited and Examinations conducted.

MATRON.—Re-engagement in high-class Boys' School. Highest references. Good experience in Public School. Address—F., "Educational Times" Office, 89 Farringdon Street, London, E.C.

## A COMPLETE FRENCH CLASS

BOOK.—HALL'S FIRST FRENCH COURSE and FRANCE AND THE FRENCH. 1s. 6d.; Key, 1s. 8d. New and Revised Edition. Contains nearly 200 Exercises, English and French Grammar, Questionnaire, Interesting and Easy Reading Lessons, Vocabulary, Maps, &c.

LONDON:

SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., Ltd.; and of all Publishers.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

## THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

Headmasters' Conference.  
Incorporated Association of Headmasters.  
College of Preceptors.  
Teachers' Guild.  
Welsh County Schools' Association.  
Private Schools' Association.  
Association of Headmasters of Preparatory Schools.  
Association of Headmasters of Roman Catholic Schools.  
Assistant-Masters' Association.  
Association of Technical Institutions.  
&c. &c.

The rates of Commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

## OXFORD LOCAL EXAMINATIONS. LONDON COMMITTEE (BOYS).

The Regulations for the Senior, Junior, and Preliminary Examinations for 1900 can be obtained from the Secretary,

E. LAYMAN, Esq.,

1 Garden Court, Temple, E.C.

Just published. SECOND EDITION. With numerous Illustrations and Additional Chapters. Crown 8vo, 5s. net.

## MENTALLY DEFICIENT

CHILDREN: their Treatment and Training. By G. E. SHUTTLEWORTH, B.A., M.D., &c., Medical Examiner, Defective Children, School Board for London; late Medical Superintendent, Royal Albert Asylum for Idiots and Imbeciles of the Northern Counties, Lancaster; formerly Assistant Medical Officer, Earlswood Asylum.

"The book is an admirable manual on the subject of which it treats, and calls for careful study by all dealing with the education and training of feeble-minded children."—School Board Gazette.

LONDON: H. K. LEWIS, 136 GOWER STREET, W.C.

## COLLEGE OF PRECEPTORS.

### Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

### INTELLECTUAL EDUCATION.

To be delivered by JAMES SULLY, M.A., LL.D., Grote Professor of the Philosophy of Mind and Logic at University College, London.

#### SYLLABUS.

I.—Education in its relation to Natural Development—Historical Evolution of the Idea of Education—Different Aspects of Educational End: Fullness of Individual Development, Fitness for Life: Readiness for the Social State and the Duties of Citizenship—Respective Functions of Parent, State, and Teacher, in Education—Claims of the Home, of the Child's World, and of the Child's Inner Self—Relation of Education to Social Conditions, to the Spirit of the Age, and to Progress.

II.—Intellectual Education in its relation to Education as a Whole—General Value of the Intellectual Side of Man—Gradual Evolution of the End of Intellectual Education: from Practical Skill (the End of Savage Training) to Intelligence—Conflict of Ideas of different stages of Culture in Contemporary Discussions: Useful Knowledge *versus* Culture—The True Standard of "Knowledge-Values"—What a Cultivated Intelligence includes—In what sense Intelligence can exist in a Child.

III.—The Process of Mental Development—Growth of Intelligence or Gradual Storage and Assimilation of Material—The Part of Feeling and of Effort in Intellectual Development—The Organic Base of Intellectual Progress: the Efficiency of Sense-Organs, Muscles, and Brain—First Movements of Intelligence in the Child's own World (Play), and in the Search for Facts and Explanations—The Problem of the Young Child's Curiosity—The Too Much and the Too Little in the way of the Grown-Up's Stimulation of the Growing Intelligence.

IV.—(1) Intellectual Education begins by a Primary Presentation of Sense Material—The Wakefulness of the Early Senses—Animal and Human Senses compared—The Importance of the Finer Exercises of Eye, Ear, and Hand—Interest of Children in the Report of the Senses—Interest and Value of a Testing of the Senses—Over-training of the Senses.

V.—A Child's Interest is in Things rather than in Sensations—The Attitudes of Child and Animal towards the World of Objects—The Charm of the Ever Unfolding New—The Gradual Evolution of Interests and their Effect on Attention and Inquiry—The Teacher's Function in relation to young half-formed Interests—What Awakening an Interest means—The Place of Sturdy Effort in the Growth of Interests.

VI.—The Progressive Examination of Things by the Child—First, "General" Impressions, and, later, Full and Concrete ones—The Minds that "stick" at General Impressions—What Education can do to take the Young Mind beyond these—Methodical Analysis of Presentations and its Difficulties—Error of plunging Child into the Abstractions of "Qualities" and "Relations"—Illustrations from the Teaching of Form and of Drawing.

VII.—The Relation of Observation to Assimilation of Sense-Presentations—Interest in Objects includes Impulse to Assimilate—The Lower Kind of Animal Assimilation: Recognition—Assimilation as Expansive, and as Mastering the New through its relation to the Old—True and False Conception of Apperception—The Apperceptive Attitude and its relation to the Store of Impressions—The Aim of Object Teaching as the Development of right Apperceptive Attitudes.

VIII.—The Way in which the Inner Store of Ideas grows into an ordered Multiplicity—Observation and Memory—The Child who Sees and Forgets—Associative Grouping of Ideas—Apperceptive Systems as the Beginning of Organized Knowledge—Types of Associative Grouping: the Mind for Particulars and Details, and the Mind for Generalities and Relations—The Exercise of the Memory as Training in Exactness—Errors of Childish Reproduction, Single and Recurring, and the way to deal with them.

IX.—The Psychology of Language as affecting Processes of Instruction—General Function of Names and of Articulated Language in the Growth of Intelligence—The Seer and the Namer of Things—Language as fixing the Results of Methodical Observation—The Need of Language in carrying out an orderly Arrangement of Ideas—The Teacher's Problem of selecting Fitting Language, and of insisting on its Accurate Reproduction—Language as a Fetish and as an Object of Contempt in Teaching.

X.—(2) Secondary Presentation of Intellectual Material through the medium of Language—The Aim and Process of Verbal Instruction, pure and simple—Words as Abstract Symbols, and as contributing to the Formation of Images—The Apperceptive Process in following Verbal Instruction—The Teacher must excite the Learner at once to a Reproduction of Ideas and to a further Elaboration of these—Different ways in which a Child's Mind may go wrong here—How a Child thinks of the Desert—How the Skilled Teacher keeps in touch with the Imaginative Movement of his Pupils' Minds.

XI.—The Name as Instrument of Thought—Transition from Image to General Idea—How a Child represents a Class of Things and their Qualities and Relations—The Problem of Thought-Training—The Child to rise above the Particular and yet to hold fast to Particulars—The Value of Judicious Presentation of Examples—When and how Definitions are to be reached.

XII.—Thought as an Articulated setting forth of Relations—Comparison of Primitive and Cultured Forms of Language—Grown-up Language as the Child's Burden—Meaning of the Rule "From the Indefinite to the Definite"—Early Exercises in Reasoning—The Stimulation and Restraint of Thought—How to deal with the Backward and the too Forward Reasoner.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\* \* \* The Lectures will be delivered on THURSDAY EVENINGS at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

# COLLEGE OF PRECEPTORS' EXAMINATIONS, 1900.

## SUITABLE BOOKS IN THE University Tutorial and Preceptors' Series.

### Latin and Greek Classics.

- CAESAR.—GALLIC WAR, BOOKS V., VI.** By A. H. ALLCROFT, M.A., and W. F. MASOM, M.A. Text and Notes. **1s. 6d.** each. Vocabulary. **1s.** each.
- CICERO.—DE SENEOTUTE.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. Text and Notes. **1s. 6d.** Vocabulary. **1s.**
- HOMER.—ODYSSEY, BOOKS XI., XII.** By J. H. HAYDON, M.A. Lond. and Camb., and F. G. PLAISTOWE, M.A. Text and Notes. **2s. 6d.**
- HORACE.—ODES, BOOK III.** By A. H. ALLCROFT, M.A., and B. J. HAYES, M.A. Text and Notes. **1s. 6d.** Vocabulary. **1s.**
- VERGIL.—ÆNEID, BOOK VI.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Lond. Text and Notes. **1s. 6d.** Vocabulary. **1s.**
- VERGIL.—ÆNEID, BOOK IX.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. Text and Notes. **1s. 6d.**

### English.

- ENGLISH GRAMMAR, THE PRECEPTORS'.** By W. H. LOW, M.A. Lond., and ARNOLD WALL, M.A. Lond. [In the press.]
- THE ENGLISH LANGUAGE: Its History and Structure.** By W. H. LOW, M.A. Lond. With 320 Test Questions. *Fifth Edition.* **3s. 6d.**
- HISTORY OF ENGLAND, THE MATRICULATION. (To 1702.)** By C. S. FEARENSIDE, M.A. Oxon. **3s. 6d.**
- SHAKESPEARE.—AS YOU LIKE IT.** Edited, with Introduction and Notes, by Prof. W. J. ROFFE, D.Litt. **2s.**

### Latin and Greek.

- GREEK READER.—THE TUTORIAL.** By A. WAUGH YOUNG, M.A. Lond., Gold Medalist in Classics. *Second Edition.* **2s. 6d.**
- LATIN COURSE, THE PRECEPTORS'.** By B. J. HAYES, M.A. Lond. and Camb. [In the press.]
- LATIN DICTIONARY, THE TUTORIAL.** By F. G. PLAISTOWE, M.A. Lond. and Camb., Gold Medalist in Classics. **6s. 6d.**
- LATIN GRAMMAR, THE TUTORIAL.** By B. J. HAYES, M.A., and W. F. MASOM, M.A. *Third Edition.* **3s. 6d.** EXERCISES AND TEST QUESTIONS ON. **1s. 6d.**
- LATIN COMPOSITION AND SYNTAX.** With Exercises. By A. H. ALLCROFT, M.A., and J. H. HAYDON, M.A. *Fourth Edition.* **2s. 6d.**
- LATIN READER, THE TUTORIAL.** With Vocabulary. **2s. 6d.**
- LATIN READER, THE PRECEPTORS'.** [In preparation.]

### Book-keeping.

- BOOK-KEEPING, PRACTICAL LESSONS IN.** By THOMAS CHALICE JACKSON, B.A., LL.B. Lond. **3s. 6d.** EXERCISE BOOK, RULED LEDGER, JOURNAL, or CASH. **3d.**
- BOOK-KEEPING, THE PRECEPTORS'.** By the same Author. [In preparation.]

### Mathematics and Science.

- CHEMICAL ANALYSIS, QUALITATIVE AND QUANTITATIVE.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and R. W. STEWART, D.Sc. Lond. **3s. 6d.**
- CHEMISTRY, THE TUTORIAL.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WM. BRIGGS, M.A., F.C.S. Part I.: Non-Metals. **3s. 6d.** Part II.: Metals. **3s. 6d.**
- CHEMISTRY, SYNOPSIS OF NON-METALLIC.** With an Appendix on Calculations. By WM. BRIGGS, M.A., F.C.S., F.R.A.S. Interleaved. **1s. 6d.**
- EUCLID.—BOOKS I-IV.** By RUPERT DEAKIN, M.A. Lond. and Oxon., Headmaster of Stourbridge Grammar School. **2s. 6d.** BOOKS I-II. **1s.**
- HYDROSTATIC, AN ELEMENTARY TEXT-BOOK OF.** By WM. BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. *Second Edition.* **2s.**
- MAGNETISM AND ELECTRICITY, TEXT-BOOK OF.** By R. W. STEWART, D.Sc. *Fourth Edition.* **3s. 6d.**
- MECHANICS, THE PRECEPTORS'.** By F. ROSENBERG, M.A. Camb., B.Sc. Lond. **2s. 6d.**
- MENSURATION OF THE SIMPLER FIGURES.** By WM. BRIGGS, M.A., and T. W. EDMONDSON, M.A. *Second Edition.* **2s. 6d.**
- SOUND, LIGHT, AND HEAT, FIRST STAGE.** By JOHN DON, M.A., B.Sc. Lond. **2s.**
- TRIGONOMETRY, THE TUTORIAL.** By WILLIAM BRIGGS, M.A., LL.B., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. **3s. 6d.**
- TRIGONOMETRY, THE PRECEPTORS'.** Edited by WILLIAM BRIGGS, M.A., LL.B., F.C.S., F.R.A.S. **2s. 6d.**

### French.

- FRENCH COURSE, THE PRECEPTORS'.** By E. WEEKLEY, M.A. Lond. **2s. 6d.**
- FRENCH COURSE, BARLET'S PRECEPTORS' JUNIOR.** By STÉPHANE BARLET, B. es Sc., Univ. Gull., Examiner in French to the College of Preceptors. **1s. 6d.**
- FRENCH PROSE COMPOSITION.** By ERNEST WEEKLEY, M.A. Lond. **3s. 6d.**
- FRENCH READER, THE PRECEPTORS'.** With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. Lond. **1s. 6d.**
- FRENCH PROSE READER.** Edited by S. BARLET, B. es Sc., and W. F. MASOM, M.A. With Notes and Vocabulary. *Third Edition.* **2s. 6d.**

# SCIENCE AND ART DEPARTMENT EXAMINATIONS.

## Suitable Books in the Organized Science Series.

### For the Elementary Stage. 2s. each Volume.

- FIRST STAGE MECHANICS (SOLIDS).** By F. ROSENBERG, M.A., B.Sc. *Second Edition.*
- FIRST STAGE MECHANICS OF FLUIDS.** By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc. *Second Edition.*
- FIRST STAGE SOUND, LIGHT, AND HEAT.** By JOHN DON, M.A., B.Sc.
- FIRST STAGE MAGNETISM AND ELECTRICITY.** By R. H. JUDE, M.A. Cantab., D.Sc. Lond. *Second Edition.*
- FIRST STAGE INORGANIC CHEMISTRY (THEORETICAL).** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WILLIAM BRIGGS, M.A., F.C.S.
- FIRST STAGE BOTANY.** By A. J. EWART, D.Sc. Lond. **2s.** [In preparation.]
- FIRST STAGE HYGIENE.** By R. A. LYNTER, B.Sc. **2s.** [In preparation.]
- FIRST STAGE PHYSIOGRAPHY.** By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S.
- FIRST STAGE INORGANIC CHEMISTRY (PRACTICAL).** By F. BRDOW, Ph.D., D.Sc. **1s.** *Second Edition.*
- PRACTICAL ORGANIC CHEMISTRY.** By GEORGE GEORGE, F.C.S. **1s. 6d.**

### For the Advanced Stage. 3s. 6d. each Volume.

- SECOND STAGE MATHEMATICS.** Being the Additional Algebra and Euclid with the Trigonometry required for the Second Stage. Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. *Second Edition.*
- ADVANCED MECHANICS.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Vol. I. DYNAMICS. Vol. II. STATICS. *Second Edition.*
- ADVANCED HEAT.** By R. WALLACE STEWART, D.Sc. (Lond.). *Second Edition.*
- ADVANCED MAGNETISM AND ELECTRICITY.** By E. WALLACE STEWART, D.Sc. Lond.
- ADVANCED INORGANIC CHEMISTRY.** By G. H. BAILEY, D.Sc. Lond. Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. *Second Edition.*
- ADVANCED INORGANIC CHEMISTRY.** **2s.**
- PRACTICAL ORGANIC CHEMISTRY.** By GEORGE GEORGE, F.C.S. **1s. 6d.**

# MESSRS. LONGMANS & CO.'S LIST.

By **CYRIL RANSOME, M.A.**

## A SHORT HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TO THE PRESENT DAY (1895).

ELEVENTH EDITION. Crown 8vo, 3s. 6d. Or in Two Parts, 2s. each. PART I.—To the Death of Elizabeth, A.D. 1603. PART II.—A.D. 1603 to 1895. With Tables, Plans, Maps, Index, &c.

### A SUMMARY OF RANSOME'S SHORT HISTORY OF ENGLAND.

With 22 Maps and Plans and 34 Genealogical Tables. Crown 8vo, 1s.

[Just Published.]

By **SAMUEL RAWSON GARDINER, M.A., LL.D.**

## A STUDENT'S HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TO 1885.

Vol. I.—B.C. 55—A.D. 1509. With 173 Illustrations. Crown 8vo, 4s. Vol. II.—1509—1689. With 96 Illustrations. Crown 8vo, 4s. Vol. III.—1689—1885. With 109 Illustrations. Crown 8vo, 4s.

COMPLETE IN ONE VOLUME, with 378 Illustrations. Crown 8vo, 12s.

### PREPARATORY QUESTIONS ON THE ABOVE.

By R. SOMERVELL, M.A., Assistant-Master at Harrow School. Crown 8vo, 1s.

## A SCHOOL ATLAS OF ENGLISH HISTORY.

With 66 Maps and 22 Plans of Battles, &c. Fcap. 4to, 5s.

## OUTLINE OF ENGLISH HISTORY, B.C. 55 to A.D. 1895.

With 98 Woodcuts and Maps. Fcap. 8vo, 2s. 6d.

By **C. W. C. OMAN, M.A., F.S.A.**

**A History of Greece.** From the Earliest Times to the Macedonian Conquest. With Maps and Plans. Crown 8vo, 4s. 6d.

By **ARTHUR SIDGWICK, M.A.**

**A First Greek Writer.** Crown 8vo, 3s. 6d.  
A KEY, for the use of Masters only. 5s. 2½d. net, post free.

**Introduction to Greek Prose Composition.**  
With Exercises. Crown 8vo, 5s.

A KEY, for the use of Masters only. 5s. 3d. net, post free.

**Scenes from Greek Plays.** Rugby Edition. Abridged and Adapted for the use of Schools. Fcap. 8vo, 1s. 6d. each.

**Aristophanes.**—The Clouds. The Frogs. The Knights. Plutus.

**Euripides.**—Iphigenia in Tauris. The Cyclops. Ion. Electra. Alcestis. Bacchae. Hecuba. Medea.

**An Introduction to Greek Verse Composition.** By ARTHUR SIDGWICK, M.A., and F. D. MORICE, M.A. With Exercises. Crown 8vo, 5s.

A KEY, for the use of Masters only. 5s. 2½d. net, post free.

By **T. K. ARNOLD, M.A.**

**Arnold's Practical Introduction to Latin Prose Composition.** By G. GRANVILLE BRADLEY, D.D., Dean of Westminster. 5s.

A KEY, for the use of Masters only. 5s. 2½d. net, post free.

**Arnold's Practical Introduction to Greek Prose Composition.** By EVELYN ABBOTT, M.A., LL.D. Crown 8vo, 3s. 6d.

A KEY, for the use of Masters only. 3s. 8d. net, post free.

By **Dr. B. H. KENNEDY.**

**The Revised Latin Primer.** Crown 8vo, 2s. 6d.

**The Shorter Latin Primer.** Crown 8vo, 1s.

**Exercises on the Shorter Latin Primer.** By M. G. and J. E. KENNEDY, and H. WILKINSON, M.A. Cr. 8vo, 1s. 6d.

A KEY, for the use of Masters only. 2s. 9d. net, post free.

By **ALEXANDER BAIN, LL.D.**

**A First or Introductory English Grammar.** 18mo, 1s. 4d.

KEY, with additional Exercises. 18mo, 1s. 9d.

**A Higher English Grammar.** Fcap. 8vo, 2s. 6d.

**A Companion to the Higher English Grammar.** Being intended as a help to the thorough mastery of English. Crown 8vo, 3s. 6d.

**English Composition and Rhetoric.** Original Edition. Crown 8vo, 4s.

**English Composition and Rhetoric.** Enlarged Edition. (Two Parts.) Part I.: The Intellectual Elements of Style. Crown 8vo, 3s. 6d. Part II.: The Emotional Qualities of Style. Crown 8vo, 3s. 6d.

**On Teaching English,** with Detailed Examples and the Definition of Poetry. Crown 8vo, 2s. 6d.

By **A. A. SOMERVILLE, M.A.**

**A First French Writer.** For the use of Lower and Middle Forms of Schools. Crown 8vo, 3s. 6d.

By **LÉON CONTANSEAU, M.A.**

**A Practical Dictionary of the French and English Languages.** Post 8vo, 3s. 6d.

**A Pocket Dictionary of the French and English Languages.** Being a careful Abridgment of the Author's "Practical French and English Dictionary," preserving all the most useful features of the Original, condensed in a much smaller Volume. Square 18mo, 1s. 6d.

By **JAMES SULLY, M.A.**

**Outlines of Psychology.** Crown 8vo, 9s.

**The Teacher's Handbook of Psychology.** Crown 8vo, 6s. 6d.

**Studies of Childhood.** 8vo, 10s. 6d.

**Children's Ways:** being Selections from the Author's "Studies of Childhood," with some additional matter. With 25 Figures in the Text. Crown 8vo, 4s. 6d.

## CAMBRIDGE UNIVERSITY PRESS.

NEW WORK BY SIR JOSHUA FITCH.

**Educational Aims and Methods.** Lectures and Addresses by Sir JOSHUA FITCH, M.A., LL.D., late Her Majesty's Inspector of Training Colleges, and author of "Lectures on Teaching," "The Arnolds and their Influence on English Education." [Nearly ready.]

The forthcoming volume consists of lectures and addresses given in Cambridge, or before the Teachers' Guild and other bodies of Teachers in England and in America. Its general aim is to direct attention to various aspects of educational theory and of practical work; and it includes several monographs on the lives of distinguished and representative teachers.

## PITT PRESS SERIES.—NEW VOLUMES.

A NEW FRENCH VERSE READER.

**A Primer of French Verse for Upper Forms.** Edited by FREDERIC SPENCER, Professor of the French Language and Literature in the University College of North Wales; formerly Chief Master of the Modern Side in the Leys School, Cambridge. 3s.

*Guardian*.—"A really valuable contribution to the list of French school books." *School World*.—"A very good book."

*Educational Times*.—"The rules are well expressed, and it may confidently be said that a pupil who has read this book with care will acquire an insight into French prosody such as no other 'primer' could give him, and will feel that this is a book to which he can always turn again with pleasure."

**Hauff.—Der Scheik von Alessandria und seine Sklaven.** Edited, with Notes and Vocabulary, by W. RIPPMAAN, M.A., Professor of German at Queen's College, London. [Immediately.]

## THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

*Subject for Cambridge Local Examinations, December, 1900; Oxford Local Examinations, July, 1900; and College of Preceptors Examinations, 1900.*

**As You Like It.** 1s. 6d. With Introduction, Notes, Glossary, and Index, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge.

*Guardian*.—"Mr. Verity, the editor, has provided material for all sorts of students. For the beginner we have the notes and a reprint of Charles Lamb's outline of the story. For older readers we have copious extracts from Lodge's 'Rosalinde.' For the examiner, the etymologist, and the curious student, we have the glossary, the index of the important words and phrases, and the notes on metre and on the date and sources of the play. All of these aids evince patient research, accurate scholarship, and thoughtful judgment."

**Cicero.—Pro lege Manilia.** Edited, with Introduction and Notes, by J. C. NICOL, M.A., Trinity Hall, Master of Portsmouth Grammar School. 1s. 6d.

*Subjects for Cambridge Local Examination, December, 1900.*

**Homer.—The Odyssey, Book XI.** Edited, with Introduction and Notes, by J. A. NAIRN, M.A., Fellow of Trinity College. 2s.

**Malot.—Remi on Angleterre.** Edited, with Notes and Vocabulary, by M. DE G. VERRALL, of Newnham College. 2s.

**Racine.—Athalie.** Edited, with Introduction and Notes, by H. W. EVE, M.A., late Fellow of Trinity College. 2s.

*Literature*.—"Admirably edited. . . . The introduction is a model of its kind—lucid in style, full of facts. . . . It is almost an ideal edition for use in higher forms." *Scotsman*.—"There could be no better edition of the play for English students."

## CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

General Editor—W. H. WOODWARD, of Christ Church, Oxford, Principal of University (Day) Training College, Liverpool, and Lecturer on Education in Victoria University.

*Adapted for Use of Candidates for Certificate Examinations of Education Department.*

**The Making of Character: some Educational Aspects of Ethics.** By JOHN MACCUNY, Balliol College, Oxford; Professor of Philosophy in University College, Liverpool. Crown 8vo. [Nearly ready.]

*Specially suited for Candidates for Queen's Scholarship Examinations, December, 1900, and Certificate Examinations, July, 1900.*

**A Short History of the Expansion of the British Empire, 1500-1870.** By WILLIAM H. WOODWARD. With Maps. Crown 8vo, cloth, 4s.; cloth extra, gilt top, 5s.

*Athenæum*.—"Thoroughly to be recommended."

*Educational Times*.—"Mr. Woodward tells this story *in usum scholarum* in an altogether admirable manner."

*School World*.—"It is full of wisdom applicable to our own day."

**Geometrical Drawing.** With Notes and Examples. Part I. Plane and Elementary Solid. By W. H. BLYTHE, M.A., Jesus College. 2s. 6d. *Extract from Preface*.—"This book is intended for Candidates reading Geometrical Drawing for the Science and Art Department, South Kensington, Elementary Stage, for entrance to Sandhurst and Woolwich, and for the Cambridge Preliminary and Junior Local Examinations."

Part I. contains Plane Geometrical Drawing and Solid Geometry so far as it is included in the Syllabus, Geometrical Drawing (Art), Subject 1 A, page 231, Science and Art Directory, 1899."

**Geometry for Young Beginners.** An Introduction to Theoretical and Practical Geometry. By F. W. SANDERSON, Headmaster of Omuld School. 1s. 4d.

*Teachers' Monthly* (Birmingham).—"We are delighted with this book."

*Morning Post*.—"The work will commend itself to teachers and students."

**Demonstrations in Greek Iambic Verse.** By W. H. D. ROUSE, M.A., formerly Fellow of Christ's College, Cambridge; a Master at Rugby School. Crown 8vo, 6s.

*Literature*.—"In many ways an improvement on the work of predecessors in the same field. . . . The exercises are singularly exhaustive and lucid, and the book will be of great service to composition masters and their pupils."

*Educational Times*.—"We hope that this book will find its way into the hands of many teachers, to the certain benefit both of themselves and of their pupils."

*School World*.—"This is a good book, which should be obtained by every classical master."

*Athenæum*.—"Mr. Rouse has written with care and judgment, and his work ought to be decidedly useful to teachers."

**Graduated Passages from Greek and Latin Authors for First-Sight Translation.** Selected and supplied with short Notes for Beginners by H. BENDALL, M.A., and C. E. LAURENCE, B.A., Assistant-Master of Blackheath Proprietary School. Crown 8vo.

Part I.—EASY. 1s. 6d.

Part II.—MODERATELY EASY. 2s.

Part III.—MODERATELY DIFFICULT. 2s.

Part IV.—DIFFICULT. 2s.

\* \* \* *Cambridge Editions of Caesar, Vergil, and Xenophon.*—The attention of Schoolmasters is called to the fact that there are now two editions of some of the works of these authors in the *Pitt Press Series* and the *Cambridge Series for Schools and Training Colleges*. The Editions in the *Cambridge Series for Schools and Training Colleges* have *Complete Vocabularies*. If, in ordering, the Edition required is not specified, the *Pitt Press Edition*, without vocabulary, will be sent.

The following editions have COMPLETE VOCABULARIES.

**Caesar.—Gallic War, I. (1-29), II., III., IV., V., VI.** Edited, with Introduction, Notes, and Complete Vocabulary, by E. S. SHUCKEBURGH. 1s. 6d. each.

**Vergil.—Aeneid, I., II., V., VI., IX., and XII.** Edited, with Introduction, Notes, and Complete Vocabulary, by A. SIDGWICK, Reader in Greek in the University of Oxford. 1s. 6d. each.

**Xenophon.—Anabasis, II., III., IV., and V.** Edited, with Notes and Complete Vocabulary, by G. M. EDWARDS, Fellow and Classical Lecturer of Sidney Sussex College, Cambridge. 1s. 6d. each.

**Ovid.—Selections from the "Tristia."** For the Use of Middle School Classes. Edited, with Notes and Vocabulary, by H. F. MORLAND SIMPSON, Rector of Aberdeen Grammar School, formerly Scholar of Pembroke College, Cambridge. 1s. 6d.

*School Guardian*.—"Exact and scholarly, and at the same time simple, text-books. The University Press are to be congratulated upon having secured as editors such eminent scholars: their names are a guarantee of their work. These text-books will find their way into numberless preparatory schools and lower forms of public schools: they deal so thoroughly and clearly with the subject in each case that nothing better could be desired by master or pupil. Among others, there is this immense advantage: each volume is its own note-book and dictionary: the student, however elementary his knowledge, needs only the book in hand and a simple grammar."

A MANUAL FOR CONFIRMATION CANDIDATES.

**The Church Catechism Explained.** By the Rev. A. W. ROBINSON, B.D., Warden of the Mission College of Allhallows Barking, E.C., and Examining Chaplain to the Bishop of Wakefield. Second Edition. Fcap. 8vo, 2s.

*Record*.—"A really useful manual."

*Church Bills*.—"A very excellent book; quite one of the best, if not the best, on the Catechism."

*Church Times*.—"An admirable work, both as to the matter and its arrangement."

Six or more copies of the two following books for class use can be supplied at Half the published prices, and may be ordered through any Bookseller.

**Gospel History of our Lord Jesus Christ** in the Language of the Revised Version, arranged in a Connected Narrative, especially for the use of Teachers and Preachers. By Rev. C. C. JAMES, M.A., Rector of Wortham, Suffolk, and late Fellow of King's College. Crown 8vo. Second Edition. 3s. 6d.

**A Harmony of the Gospels** in the Words of the Revised Version, With copious References, Tables, &c. Arranged by Rev. C. C. JAMES, M.A. Crown 8vo. 5s.

The Educational Times.

*A New Beginning.* Most interests of late have had to bow to the interest of war, compared with which nothing has had much chance of arresting and holding the public attention. The subject of education has suffered with the rest, yet not so much as the rest, because it has been borne in upon the mind of the country that war and education have a great deal to do with each other, and that physical strength and physical courage will not go very far without the applications of science and the guidance of a trained intelligence. War in itself is an "ugly and venomous" thing; but it carries in its head the "precious jewel" of self-revelation, stimulus, national union and effort. We do not wonder that statesmen and politicians, writers and speakers, have on many recent occasions agreed in declaring that we need nothing so much for the future as the trained intelligence and the scientific mind. Every new stimulating influence is welcome, no matter whence it flows. All is grist for our mills to grind. The people want to be better educated, not only to be drilled on their feet and made cunning with their hands, but to be trained in mind and character as well. If war has served to bring them to this point, let us be thankful for the fact.

The Board of Education will help us to make our new departure. It is now virtually constituted; we have the outlines of its new organization at the same moment with the statutes of the remodelled University of London, and the two will work together in shaping our public education according to our needs. One month from to-day the Act of last Session will come into operation, and the Government seem to be fully bent on completing the machinery by which it is to do its work. A day or two ago, the Duke of Devonshire said in the House of Lords that the Departmental Committee appointed to consider the consequent changes of staff and of organization had made two reports, which had been to a certain extent acted upon, and were being carried into effect. The Committee, he said, was now engaged in considering its third and probably final report, and it would be presented in a short time. Being asked when he hoped to introduce the Bill for constituting the Local Authorities to carry out the new system, the Lord President thought that he would probably not be in a position to bring it in until the Board of Education Act had come into operation. Well,

that is not long to wait. A Bill introduced in April might certainly be passed in July, even at our leisurely British rate of Parliamentary procedure.

Yet, as our readers are well aware, the Act, as it stands, will cover a large area of educational activity, and will become operative at once. The Permanent Secretary, a *grata persona* with all branches of the teaching profession, will know how to direct the new energy into the old channels, and he will have at his side three principal Assistant-Secretaries, specially concerned with technical, elementary, and secondary education. It is understood that Sir William Abney and Mr. Tucker have been appointed to two of these positions, but that the third is not (when these words are written) finally selected. It is very seriously to be hoped that the Assistant-Secretary for Secondary Education will be an official thoroughly in touch with the ideas on which secondary schoolmasters and the Universities have definitely expressed their opinions during the past five or six years. There was an article in last week's *Guardian*, written with much insight into the situation, which reminded the Government that they have been provided by schoolmasters themselves with a rare opportunity.

The opportunity is indeed unique. For once, all the living forces representative of secondary and higher education—the Universities, the public schools, and the other secondary schools—are united, and speak with unanimous voice in favour of reform. They ask for the training and certifying of teachers, the appointing of inspectors, for the establishing of a representative Consultative Body by which the Board of Education and schools of all kinds may be brought into organic and constant relationship. The new Act provides for all this; but, since its provisions leave registration, training, and inspection all optional, and indicate no principles on which the constitution of the Consultative Committee is to be framed, it rests absolutely with the new Minister of Education and his advisers to determine whether the promises of the Act become realities or not.

It cannot be too often pointed out that the main educational energy, zeal, and enthusiasm of the past few years, of which the Board of Education Act is in large measure the outcome, have been manifested by the Universities, by the secondary teachers, and by people concerned in secondary education. The elementary zeal came to a head in 1870; the technical zeal had its fruition twenty years later. All the friends of education are concerned in the new reforms; but, if the secondary schoolmasters had not spoken out and insisted, if there had been no Oxford and Cambridge Conferences, no Royal Commission, and no continuous activity of the secondary associations, there would at this moment have been either no Bill at all or a Bill treating national education in the secondary stage as a mere

question of higher-grade Board schools. The Board of Education Act is comprehensive, conciliatory, and impartial as regards the different branches of education, but it is stamped in particular with the secondary hall-mark. If the new organization and the new administration correspond with the ideas on which the Act is evidently framed, we may be hopeful as to the future of secondary schools. There is no reason why a great deal of useful work should not be undertaken at once—there is every reason why it should be undertaken. Inspection, registration, the definition of efficiency, the statement of conditions for grants in the case of non-technical schools—all these things require immediate attention. The fact is well brought out by Dr. R. P. Scott in his thoughtful and vigorous article in the *Fortnightly Review* for February. For the improvement of secondary education, he says,

Four things are necessary to be done. First, to find out exactly what is going on inside our existing uninspected schools. That means, as the first step, an intelligent survey by competent and experienced inspectors. And they must be men and women in sympathy with various types of educational endeavour, not pedants or mere partisans of literature or of science, or of State monopoly, but anxious to stimulate and to make use of every bit of good private effort. The next thing to be done is to rescue many of our day secondary schools from financial embarrassments, and to place the salaries and prospects of assistant masters and mistresses on a satisfactory level. The third step would follow at once—the raising of the intellectual standard of many of the schools, improvements in the professional preparation of the teachers, and the diffusion throughout the nation of a clear and inspiring idea of what a good secondary school could and should do for its pupils. But, concurrently with this, the fourth need should be grappled with—namely, the spread of the public-school spirit as far as possible throughout secondary education.

This is well and judiciously said. The new Act, rightly administered, should help us to advance in all these directions.

### NOTES.

THE Statutory Commission for the reorganization of London University has reported its conclusions to Parliament. The document which now lies on the table consists of 136 statutes and regulations, which will receive the Royal Assent before the end of the present month, provided that no motion in a contrary sense is carried in the meantime in either House. The effect of the new statutes is in accordance with what has already been made public. The Senate will consist of 54 members—4 to be appointed by the Crown; 16 by Convocation; 2 each by the Colleges of Physicians and Surgeons, University and King's Colleges, the Incorporated Law Society, and the County Council; 1 each by Lincoln's Inn, the Inner and Middle Temples and Gray's Inn, the City Corporation, and the City and Guilds Institute; and 16 by the Faculties of Arts, Science, Medicine, Theology, Laws, Music, Engineering, and Economics. The last two faculties are new creations, and they will have their schools at the Central Technical Institute and the School of Economics.

THE Senate will have three Standing Committees: an Academic Council of twenty, including the sixteen representatives of the faculties; a Council for External Students, numbering twenty-eight, and including the sixteen representatives of Convocation; and a Board for the Extension of University Teaching, which will probably take over the work of the London Society. The Academic Council and the Council for External Students will provide respectively for the Intermediate and Final ex-

aminations of internal and external students—Matriculation being identical for both classes; and they will arrange between them for “the equalization, as far as possible, of the standards of knowledge and attainments prescribed for the degrees conferred upon internal and external students.” Convocation will retain the proxy vote for the Chancellorship, the Chairmanship of Convocation, the sixteen representatives on the Senate, and the Parliamentary representative of the University.

THE schools of the University will include University and King's Colleges; Hackney, New, Regent's Park, and Cheshunt Colleges, the Richmond Wesleyan College, and St. John's Hall, Highbury; Holloway and Bedford Colleges for Women; the Royal College of Science and the Wye Agricultural College; the ten hospital schools of medicine, including the London School of Medicine for Women; the Central Technical College, and the London School of Economics and Political Science. When funds permit, the Senate will appoint professors, readers, lecturers, and “recognized teachers.” Special provision is made for the encouragement of post-graduate study and research. The Senate will have power to confer “ad eudem” and honorary degrees. These are the main provisions of the new statutes; and it is now at last reasonable to affirm that the teaching University of London is constituted on definite and durable foundations.

A CORRESPONDENT supplements as follows our notice last month of the appointment of Mr. Hobhouse as editor of the *Guardian*. The notice in question, we must admit, was a little meagre in regard to the transfer of an eminent schoolmaster to the editorial chair of our leading Church paper—a paper which is distinguished, amongst other ways, by its excellent weekly summaries of educational events. “Walter Hobhouse was a scholar of Balliol, student of Christ Church, Fellow of Hertford, tutor of Hertford and of Christ Church, winner of the Chancellor's English Essay Prize, 1885, and of the Chancellor's Latin Essay Prize, 1886. He was placed in the First Class in Classical Moderations, as well as in the First Class in Literæ Humaniores. But for the break-down of health at Durham last Easter, he was thought by good judges the fittest headmaster for Eton, should a vacancy arise. He is a man of decided, but moderate, Church views, of strong and calm judgment; a good representative of the old High Churchmen, scholarly and loyal, and by no means in sympathy with the extreme men who detest that Reformation which has probably been the greatest factor in the history of Great Britain, and has certainly developed all that is most energetic, expansive, and permanent in our national life.”

MR. ERNEST GRAY, M.P., has recently paid a visit to Wales, and delivered an address at Lampeter on “Our National System of Education.” His words were not words of comfort to the Welsh educational enthusiast. Not only is the average attendance in Welsh elementary schools much lower than in England, but the county in which he was speaking is, according to the Departmental returns, at the bottom of the scale, showing a percentage of only 72.9, as against 82 in the English counties. It also appears that the teaching is by no means satisfactory. Apparently he thought that a cold douche would have a bracing effect upon his audience. He explained that he dwelt upon the

black spots in Welsh education, and refrained from speaking of the great things Wales had done, because, if there was only one Welshman present, they might safely count upon hearing those things during the course of the discussion. This is a little hard on the Celtic Ego—although he is perhaps a little pampered. However, we are glad to see that the “facer” was taken with laughter and applause.

THE Primate's recent speech in Convocation on the Leeds and Manchester schemes for bringing voluntary schools into real connexion with the national system of elementary education showed little sympathy with either. The increasing financial burden, due to Departmental insistence on efficiency, presses heavily upon Churchmen in districts such as Lancashire and some parts of Yorkshire, where voluntary schools are the rule and Board schools the exception. By the Leeds scheme it is proposed that the Local Education Authority should be enabled to aid voluntary schools out of the rates, and that the managers of schools should be compelled to make provision for the separate religious instruction of children when required by a reasonable number of parents. The Manchester scheme, on the other hand, would provide for the transfer of the schools, neck and crop, over to the Local Authority, subject, however, to adequate representation of the religious body whose school was so transferred upon the committee of managers. The Archbishop, in effect, says: “A plague on both your schemes!” and thinks the generosity of Churchmen is not yet exhausted. Doubtless he sees much scope for skirmishing in the first scheme, and no way of retreat in the second.

WHITEHALL and South Kensington, which have winked for some time past at the running of secondary schools by the elementary School Boards, are returning to the mood of strict legality in anticipation of their new responsibilities under the Board of Education Act. At the London School Board meeting on February 15, a communication was read from the Science and Art Department, stating—

That it had been brought to their notice that, in certain science or art schools and classes under the management of School Boards, no fees are charged, and the cost of the instruction given is defrayed out of the school fund; that they are advised that this application of the school fund is illegal; that they will refuse to recognize new schools or new classes, or new subjects in existing schools or classes, if they are supported wholly or partially out of the school fund; that in Section VI., page 2 of the “Science and Art Directory” it is provided that every science or art school or class must have local support either in the form of fees and subscriptions or of rates; that no school or class will be permitted to charge abnormally low fees in order to compete with others in the same locality; and that in this section the word “rates” applies to rates levied under the Technical Instruction Acts, or any other rates which may be lawfully applied to the payment of science and art instruction, and not to the “school fund,” which is raised under the provisions of the Elementary Education Acts, and cannot, as the Department are advised, be lawfully so applied.

The Department inquired how the School Board proposed to comply with the views here expressed. The letter was referred to the School Management and the Evening Continuation Schools Committees for consideration and report. We imagine that these Committees will defer their reports until after April 1. It will remain for the Education Board to cut the Gordian knot.

THE deputation from University colleges in England and Wales which brought before Sir John Gorst the needs of the day training colleges met with little encouragement. The

old residential training colleges, which began the work of training teachers in this country, have now not nearly enough accommodation. Moreover, these colleges are limited in their scope by the fact that they are, in nearly every case, maintained by denominational funds, and impose a denominational test on their students. Furthermore, very few of them are affiliated to any University, and they are thus necessarily narrower in their influence than they would otherwise be. It was plain ten years ago that something must be done to give wider opportunities to candidates for the teaching profession. Hence the day training colleges organically connected with Universities. Of these there is now a considerable number, doing excellent work, in England and Wales. But there is not enough money to carry on the work as it should be carried on; for, though a Government grant is made, it is on a much lower scale than that given to the older residential colleges. The students have had to be admitted at reduced fees, and they suffer considerable hardship in some cases by reason of the smallness of the sum (£15) allotted to them for board and lodging. Sir John Gorst suggested that School Boards should augment the public grant from their funds; but it is evident that such a disposal of the “school funds” would be illegal. Meanwhile, the day training colleges must be content to wait, it seems, and carry on their work as best they may with the funds at their disposal.

It is often alleged that the free library movement in this country has proved a failure, and there are always those ready and eager to assist at its obsequies. It is stated, with an air of severe superiority, that four-fifths of the books borrowed are works of fiction, and that solid and improving reading is neglected. It is even affirmed that the free library is a refuge for the “unclean loafer,” and that this is one of its most heinous offences. As to that, it is conceivable that some would welcome the aforesaid loafer, as showing sparks of better things, and a desire for edification—else why should he not choose the warmth of the neighbouring public-house? That most readers read novels is probably true. At Cardiff the Libraries Committee is working, by means of lectures, &c., to train children in the schools to care for the best books. The schools and the libraries are closely connected, and many interesting experiments are now going on there. Manchester, too, is doing something in this direction. Last winter a course of lectures on “English History in Works of Fiction” was given in several branch libraries in the city, and the result was so encouraging that another course is now being held on similar lines. The subject this year is changed. “Nature in Books” is now the theme of the lecturer. “The Drama of Nature” and “The Unfolding of the Plot” are two of the subjects. Books and Nature ought never to be dissociated; but, unfortunately, town life has helped to separate them a good deal. A walker should also be a reader, and often is.

THE Agricultural Education Committee has aptly suggested that such secondary teaching work as is at present carried on under the Board of Agriculture should be transferred to the Board of Education, so that one body shall be responsible for agricultural education as a whole. While not losing sight of education as a means of mental training pure and simple, the importance of its being suited to particular work in after life must be considered, and, what is more, the possibility of almost

any science subject properly taught being made a means of all-round education. At present those who take most advantage of elementary education become fitted for clerkships and similar employment. The result is that intelligent country lads crowd into the towns and there is a dearth of farm hands. There are several important questions, economic, social, hygienic, behind all this, and any scheme which would tend to settle these must be of the greatest value to the community. It is evident that rural education will have to be made different from that of towns. A question of wages no doubt comes in—a clerk well fitted for his work may get more than an ignorant agricultural labourer; but the training which the latter at present receives is not suited to his needs.

At a recent meeting of representatives of the Chambers of Agriculture, Mr. Williams, a practical farmer, expressed his opinion that the present system aimed at discovering a possible Chancellor of the Exchequer in every school. He suggested that this was unfair to the majority of country boys, and it is interesting to note how these remarks agree with some made by Prof. Ripper at the Conference of Science Teachers with regard to more specialized education. Even out of a very large class of engineering students, only one or two, said Professor Ripper, became what the training was intended to fit them for, namely, successful engineers. The majority ended in being failures; whereas, if they had received manual instruction, they might have been successes instead. Mr. Williams pointed out that Scotland still possessed many of the best agricultural labourers, although the children had been educated time out of mind. What he wished was that subjects of direct usefulness to the boy in his life in the country should not be omitted, or left in a minority, and he had come to the conclusion that a change might be made in this direction without detracting one whit from the education now given. Little or no evidence of such a calling as agriculture is apparent in most village schools, although much instruction as to things bound up with life in the country is allowed, if not very strongly encouraged. Although the walls are often covered with pictures "of all the animals that entered the ark," one seldom sees the representation of a cow, or, if one does, as likely as not the maid is shown milking her from the wrong side. No reading book used deals with the farm. Indeed, direct discouragement may be given to a boy who might be desirous of tilling the land, for, if he prove dull at other subjects, he is told that he is only fit to drive a plough or to feed the pigs. In arithmetic, bills of parcels occupy the pupil's attention, when his brain might be just as well exercised with calculating how many bushels of turnips there would be in a certain crop, or how much land could be cultivated under given conditions in a given time.

The Agricultural Education Committee, who have taken the matter up, are, in the words of Sir William Hart Dyke, "determined to see it through." They have drawn up a careful syllabus of lessons which the Education Department is considering, and it is most probable that some such line of teaching will in time become compulsory in all village schools. In this syllabus simple but true and practical object lessons on everyday plant structures, the importance of air and water to vegetation, are first dealt with. Then elementary notions of tillage to be obtained, as far as possible, by visits to farms, and where

available from school gardens, the work of insects and birds, the needs of domestic animals, come in for attention. Lastly, some slight introduction to farm measuring, and agricultural machinery as exemplified by wheel and axle, pulley, and cog wheels, finish the course.

The action of *Eady v. Elsdon* recently tried before Mr. Justice Ridley and a special jury is a rarity in the history of English law. Of actions brought by pupils against their masters there has been, perhaps, more than enough; but it is not often that the tables have been turned, and the master has brought an action against the pupil (an infant) for damage done to the master's property. There has been some misconception as to the actual defendants, and even the *Times* in its leading article on the case assumed that the action was brought against the infant's parent, thereby adding an unnecessary terror to those which are supposed to afflict a father having boys at school. By English law an infant lacks the legal capacity to contract (except for necessities), and, therefore, no action can be brought against him for the purpose of making him liable upon any agreement he may have entered into. But an infant may commit a legal wrong provided he be over seven years of age, when the mind is considered capable of criminal intent, and he may be sued for any damage which follows from any wrong or actionable negligence committed by him.

In the above case Mr. Eady might have brought his action for the damage done by the fire to his premises; but, having recovered compensation from the insurance company in respect of such damage, he sought only to recover his collateral out-of-pocket expenses and loss of professional profits from the author of the mischief. It is satisfactory to know that the jury gave him £450, and, as the infant has expectations, there seems to be some probability that his judgment will prove effective. The case does not show that an action would lie against the parent. A child is neither the servant nor the agent of his parents, so as to make them liable for his wrongful acts. If, however, a parent concealed from the master the vicious proclivities of his boy, and damages resulted to the master therefrom, the parent would, we think, be liable, although we cannot recall any instance where such an action has been brought. A master is entitled to assume that a boy has no physical or mental abnormalities, unless they are brought to his notice; and the common-law action of deceit would lie if damage to the master resulted from non-disclosure.

## SUMMARY

### THE MONTH.

The new scheme prepared by the Charity Commissioners for the administration of the Colet Fund provides that the Mercers' Company may pay annually to St. Paul's School out of Dean Colet's Foundation two-thirds of the total income, or the sum of £14,000, whichever is the larger amount; and, in the case of the Girls' School, one-third of such income, or such smaller sum as remains after payment of the sum set apart for the purposes of St. Paul's School. The residue of the income, if any, will be allowed to accumulate, and will be dealt with under a further scheme for the promotion of secondary education in or near the County of London. The schools of the foundation are (a) a school for boys, to be called, as heretofore, St. Paul's School, and maintained in the present buildings as a classical school with a modern department, and, if the Governors think fit, other

departments, under the supervision and control of the High Master; (b) a school for 400 girls, to be called St. Paul's Girls' School, and maintained on the site in Hammersmith already acquired. The High Master's salary is fixed at £300 per annum and an annual capitation fee of £3 to £6 on each of the first 300 boys, and of £2 in respect of each scholar beyond that number; the Headmistress receiving a fixed stipend of £200 and a capitation payment of £2 to £4, and £2 respectively. The fees are as follows: "Registration, 10s.; entrance, £5; tuition, for boys, £20 to £30; ditto, for girls, £15 to £25. The High Master and Headmistress are given the power of dismissing assistant-teachers, subject, however, to an appeal to the Governors. As regards scholarships, one-third are open scholarships, and are to be competed for by candidates between twelve and fourteen years of age; and, as regards one-third of the scholarships, special weight is to be attached to subjects proper to the modern department. Greek is not to be required. In the Girls' School, provision is made for thirty scholarships, of which thirteen are open to candidates between the ages of twelve and fourteen years, whether attending the school or not. The Governors are to employ £700 a year for exhibitions for girls.

THE Corporate Property (Charities and Endowments) Committee of the London County Council submitted on February 6 and 13 a report in reference to St. Paul's School, which recommended, amongst other things, that assistant-masters in the school should be paid their salaries by the Governors direct, and that the Charity Commissioners should be asked to consider the question of the reconstitution of the governing body with a view to the reduction in the number of Governors the Mercers' Company might appoint, and to the appointment of three members at least by the Council. After several speeches objecting to the report, Mr. Organ, Chairman of the Technical Education Board, said the Council was the Secondary Education Authority for London, including the City, and therefore it had a right and a duty to deal with the matter. The representations of the Council had had weight with the Commissioners in the past. The Technical Education Board was mainly responsible for the report, and he could promise the Council that, if they sent it back, the Committee would bring it up again with fuller details. Mr. Gilbert, Chairman of the Committee, said he was willing to take the report back, and this course was agreed to.

THE National Education Association, at its meeting on February 12, received a report from its Executive Committee, stating that the main feature of the past year has been "the persistence of the Government in pursuing, by administrative actions, that policy of restricting and crippling popular education which was rejected by Parliament in 1896." It is added:—"The creation in certain districts of a spurious Local Authority for Secondary Education, which has neither the power nor the responsibility of adequately supplying schools, but which can prevent others from doing so, has been followed by the attempts to suppress higher-grade schools and by other attacks upon the progressive development of the education of the people." The Committee say that they have done all that was possible to help members of the Association and others to resist "these insidious proceedings," and they have reason to hope that the efforts to check them may be more successful "now that their effect is becoming apparent to the larger public." As to training colleges, the report states that the popular dissatisfaction with the insufficiency and the predominantly sectarian character of the provision for training elementary teachers has continued to grow. "The present inadequate and unfair system affects our whole national system of education; but influences behind the present Government will apparently prevent any reform so long as it remains in office."

ON February 14 a Gladstone memorial bust was unveiled in the Debating Hall of the Oxford University Union Society by Sir William Anson, M.P. The bust has been subscribed for by past and present members of the Society, and executed by Mr. Onslow Ford, R.A. The President, Mr. R. C. K. Ensor, of Balliol College, occupied the chair, and there was a large attendance. The bust was unveiled amid loud cheers. It is a striking likeness of Mr. Gladstone, who is represented in his D.C.L. robes. A plate upon the pedestal records the fact that Mr. Gladstone was Secretary of the Union in Easter Term, 1830, and President in Michaelmas Term of the same year. Sir William Anson said in the course of his address:

There was a deep-seated conservatism on some points discernible in Mr. Gladstone's character. When Mr. Gladstone was staying at

All Souls College in 1890 he himself (the Warden) became aware that this conservatism, as regarded all matters of University legislation, was so intense as almost to be quite reactionary. It was almost impossible to recall the Oxford of Mr. Gladstone's day; but one might wish that the literary culture which he, in common with the statesmen of his time and a hundred years before, enjoyed might not die out. One could not measure other men by Mr. Gladstone's capacity as regarded literature. His literary activity would do credit to a life devoted to nothing else but literary production.

MR. HORACE PLUNKETT, Vice-President of the Irish Board of Agriculture and Industries, stated in answer to a question in the House of Commons that it was the intention of the Lord Lieutenant to transfer to the new Board, as from April 1, the Science and Art Department's institutions in Dublin, namely—the Royal College of Science, the Museum, the School of Art, the National Library, and the Botanical Gardens; but the grants in aid of the Science and Art teaching will continue for the present to be administered as heretofore from South Kensington.

A COPY of the charter and statutes which are to govern the new University of Birmingham has been laid on the table of the House of Commons. They contain a list of honorary and other officers covered by the terms of the charter, but only three persons are mentioned who have been definitely appointed to positions in the new University. The first Chancellor will be Mr. Chamberlain. No name is associated with the office of Principal, which is to be a Crown appointment, made through the Lord President of the Council; but the Vice-Principal nominated is Dr. R. S. Heath, who has been acting Principal of Mason University College. The appointment of the first Dean of the Faculty of Medicine has been conferred on Dr. B. C. A. Windle, F.R.S.

A DINNER in aid of the funds for the new scientific laboratories at King's College, London, was held in Lincoln's Inn Hall on February 14. Mr. A. J. Balfour presided, and he was supported by the Bishop of London, Mr. Justice Byrne, Principal Robertson, Mr. W. F. D. Smith, M.P., Sir Michael Foster, M.P., and many others. Mr. Balfour said:

King's College will, without question, be one of the great teaching centres of the new London University. It requires at this moment, to enable it to carry out that great function, the assistance of the public to supply it with adequate scientific accommodation, especially, I am informed, in the matter of a bacteriological and physiological laboratory and lecture-room. The results of scientific research are not provincial, but extend their benefits to all parts of the civilized world, and, in no small degree, to this great Metropolis. Let us, therefore, who are dwellers in London, feel that we have some obligation to the world at large, corresponding to the international position which we occupy. Let us do what we can as a community to further that investigation into the secrets of Nature—that storming of the citadels of knowledge in which all civilized men are, or ought to be, co-operators. It is because we have in King's College an organization ready to hand which has already shown its capacity for prosecuting such investigation that we now appeal for generous and liberal support to enable it to carry out that work more efficiently in the future.

UNIVERSITY COLLEGE, LIVERPOOL, has obtained a new charter from the Crown, under which the Court of Governors secure various additional powers. The Council is to be reconstituted. Hitherto, in addition to the President, two Vice-Presidents, Treasurer, and Principal, who are *ex-officio* members, the Council has consisted of thirteen members, of whom two are professors chosen annually by the Senate, and eleven are persons elected for a term of three years by the Court of Governors. Under the provisions of the new charter, the Council will, in addition to the above-mentioned *ex-officio* members, consist of twenty-one members, of whom three will be professors chosen by the Senate, fifteen will be persons elected by the Court of Governors, and three will be persons to be nominated by the Liverpool City Council.

A RECENT Blue-book furnishes a return showing the extent to which, and the manner in which, Local Authorities in England, Wales, and Ireland have applied, or are applying, funds to the purposes of technical education (including science, art, technical, and manual instruction) during the years 1897-98 and 1898-99 under the Local Taxation (Customs and Excise) Act, 1890, the Technical Instruction Acts, 1889 and 1891, the Welsh Intermediate Education Act, 1889, and the Public Libraries and Museums Acts. The amount expended on technical education, exclusive of the sums allocated to intermediate and technical

education under the Welsh Intermediate Education Act, was in 1897-98 £860,104, and the estimated total expenditure during the year 1898-99 was £874,611. The amounts raised by loan on the security of the local rate under the Technical Instruction Acts were in 1897-98 £69,333, and in 1888-99 £133,583. The total amount of the residue received under the Local Taxation (Customs and Excise) Act by the Councils of counties and county boroughs in England, excepting Monmouth, in respect of the financial year 1897-98, was £834,826, of which £759,400 was appropriated to educational purposes and £75,426 to the relief of rates, the latter sum including £42,108 devoted by the London County Council to relief of the rates. Of the forty-nine counties, forty are applying the whole of the residue, and nine a part of it, to technical education. The total of the residue paid to the thirteen County Councils and the Councils of three county boroughs in Wales and Monmouth was £40,061, and these Local Authorities are devoting the whole of it to intermediate and technical education under the Welsh Intermediate Act, 1889. In the case of Ireland the residue is not applicable to technical education. Twelve Local Authorities expended on technical education during the year 1897-98 £5,649, and the estimated total expenditure by them during 1898-99 was £4,523.

SIR MICHAEL FOSTER was elected M.P. for the London University, in the week ending February 10, in succession to Sir John Lubbock, now Lord Avebury. Sir Michael polled 1,271 votes, against 863 for Dr. Collins and 586 for Mr. Busk, Chairman of Convocation. We are unable to define Sir Michael's political attitude, and must allow him to attempt the definition for himself. After the declaration of the poll, the new member said:

Even if he were the superior person he had been called by some newspapers, he could not expect to sit in an isolated chair, and he must respond to the lash of the Whips of one side or the other. He had carefully considered on which side of the House he should sit, and he had come to the conclusion that it was only consistent with the opinions which he had expressed concerning the present war, and with the feelings which he had as to the supreme importance of strengthening the bonds of our great Colonies with this little island, that he should, first of all, at all events, take his seat among the supporters of the present Government. But he took it that he might so order his ways that he did not sacrifice to party demands, or jeopardize by party action, the opportunities that he might have of forwarding in the House all interests of science, learning, and education. He was subject to tradition. As one who was born in the same town as Oliver Cromwell, who was married from the house in which he dwelt, as one whose forefathers—obeying what they thought their consciences—sheltered their friend John Bunyan when he preached outlaw sermons in the woods of Hertfordshire, he felt that tradition wrapped him so about that the war cry of civil and religious liberty always made him prick his ears.

THE Gilchrist Travelling Studentship of £70, which, in December, 1899, was in the award of the Committee of Management of St. George's Training College, Edinburgh, has just been awarded to Miss Maude E. Newbegin, M.A. Miss Newbegin—who received her professional training at St. George's Training College—is at present Lecturer on English History and Latin at Edgehill Training College, Liverpool. She intends to make the system of organization and the methods of the French *écoles normales* the special object of her study.

#### UNIVERSITIES.

(From our Correspondents.)

**Cambridge.** THE controversy regarding the Mathematical Tripos, after being waged fiercely in fly-sheet form, came to a conclusion in the Senate House on February 15. Newspaper readers have been kept fully informed of the arguments used by both sides, but it may be interesting to note the two distinct points scored by the opponents of the change. The second part of the Tripos, on the authority of Dr. Routh, has been practically a failure, and the new scheme of cutting down the first part to the level of Oxford Moderations was an attempt to force the better men to take two years for the second part, instead of, as at present, taking the first part at the end of the third year, and letting the second part take care of itself. The other point that scored in argument was this: If the first part has proved unsatisfactory, it is not the fault of the regulations, but of the examiners, who fail in their duty of properly carrying out the rules by which the examination is governed. Some examiners, it is hinted not ambiguously, are

proud of their skill in propounding mathematical conundrums, to show their own power in mental gymnastics, and not to test the training of the average man who submits himself for examination. A large number of members of the Senate, not themselves experts in mathematics, proceeded upon the common-sense ground that it was for the promoters of change to prove their case. The number of those voting was smaller than would have been expected, but the abnormal character of the weather was sufficient to account for the fact; and the graces were defeated by substantial, though not overwhelming, majorities.

A new departure has been taken by the War Office authorities in regard to the selection of University candidates for the Army. Hitherto, at every half-yearly examination, a certain number of commissions have been given to candidates from all the Universities, competition among such candidates taking place in the examination of candidates for admission to Sandhurst. The nature of the schedule of subjects for that examination makes it expedient to work at a large number of subjects simultaneously. In fact, the whole examination is designed to encourage cram instead of training. Men refuse to give up the regular course of their work for their degree to take the chances of success in the Civil Service Commissioners' Examination. The War Office authorities have grasped the situation, and boldly thrown the responsibility of selecting the candidates upon the University itself. Ten Commissions in the Artillery have been assigned by the Vice-Chancellor, acting with the advice of experts, and universal satisfaction has been expressed at the way in which a difficult task was discharged.

On February 7 a crowded and enthusiastic meeting was held in the Senate House, at which resolutions were unanimously passed, urging the necessity of making the University Volunteer Corps a nursery for the scientific training of our future officers. Mr. Roberts, of Caius, under whose command the Corps was practically galvanized into a new existence, in a most able speech dwelt upon the importance of training University men in the various departments of military science. After all, amateur soldiering is as good an amusement and quite as healthy a pursuit as the practice of that sort of athletics which consists in looking on while others play football or cricket. At the present moment lectures on tactics given in the University are well attended. One College (Magdalene) provides lectures on the same subject for its own men, through the enterprise of the revered Master, Mr. Neville, who was Vice-Chancellor when the first University Volunteers were sworn in nearly forty years ago.

Natives of Asia not of European parentage have for some considerable time been allowed to substitute for Greek in the Little-go a selected English subject, but there was no provision to enable such candidates to obtain exemption by means of passing the Senior Local Examinations unless they qualified in Greek. This anomaly is now to be removed, and, for the future, our Asiatic *confères* will be able to come to the University with all their preliminary examinations behind them, ready to start the serious work of their tripos. The Senior Wranglership last year went to a native of India, and this year the Member's Prize for an English essay has been awarded to a gentleman whose name proclaims his nationality—Mr. Rajjappaya Nazayanan.

The University Reader in Talmudic, having had an attractive offer made to him from another quarter, has been induced to remain with us on condition of receiving an additional grant of £100 per annum, thus making up the income to £450 a year, of which sum, however, £250 is provided by private munificence.

The Senate on February 15 duly ratified the proposal of the Council to abolish the present system of presenting the benefices, and the first Board of Electors was nominated at the same time. The list is a fairly representative one, and is composed exclusively of members of the Church of England. The principal grace was opposed by the redoubtable Dr. Mayo, who was, however, only able to persuade seven other members of the Senate to side with him, while seventy-seven recorded their votes in favour of the grace.

The Chancellor has been asked to interpret the statutes relating to a somewhat important point—whether University Readers are precluded from taking private pupils. The Chancellor has answered the question in the negative; so that the unofficial coaches will now find the competition keener than ever. The decision will be received with a certain amount of indifference by the well established coaches. As the readers are valuable recruits to the ranks of examiners, the new regulation, by practically closing this occupation against them, will probably do more harm than good.

Personal items of the Month.—Chancellor's Classical Medals,

(1) Ernest Harrison, B.A. Trinity, (2) Russell Kerr Gaye, Trinity; Pitt Scholarship, T. G. Johnson, Jesus; Porson Scholarship, W. Rennie, Trinity; Davies Scholarship, F. H. Marshall, Emmanuel; Seeley Medal, F. W. Head, B.A. Emmanuel; Hulsean Prize, C. J. B. Gaskoin, B.A. Jesus.

### SOME DIFFICULTIES IN DISCIPLINE.

In these days of large classes one of the most pressing problems of discipline is: How to keep a class together as an organic whole, at the same time that each individual is kept busy. Even in large schools where there is careful classification the difficulty is felt by experienced teachers. In smaller schools and less happy conditions (where the novice usually has to begin his career) the inexperienced teacher often feels he is a hopelessly poor disciplinarian; whereas it is often a mere matter of solving this single problem. After all, good discipline is of a slow and gradual growth, and very often the results of the so-called "born disciplinarian" are by no means so good or so permanent as those of a teacher who has built up rationally his own powers. A great writer on education has said that the fountain of discipline is the will of the pupil, and that obedience and attention must be active; if mechanical, they become a sort of disobedience and inattention, finally degenerating into servility, the very opposite pole to true discipline. This is probably the reason of our dissatisfaction with the results of Board-school education; it is not so much a question of this or that subject that has been taught or neglected, but it is the discontented, sulky, even idle, habits engendered by the military government of huge classes.

I. The most important point to bear in mind is the *distinction between amusing a class and interesting it*. An old teacher will often say: "Interest can be over-done; I don't believe in too much of it." Reason and experience both show that this is false. Interest can never be over-done. But amusement can be, and very often is; and it must be admitted that training colleges are responsible for a great deal of evil in this respect. One of the leading teachers in England overlooked this point in an "Essay on Stimulus" written some years ago. He advocated the use of bright and entertaining sentences for analysis or translation, in preference to the dull old exercises once in vogue. This is well; but it must be continually emphasized that an interest in the subject of an exercise is not an interest in translating it from one language to another. So subtle is this distinction at times that many brilliant teachers, who can always command the attention of their class, are surprised at the poor progress in the subject. The boys' minds have been busy and cheerful indeed, and never bored, but they have not been busy over the essential things. For this reason brilliant teachers are in some cases more harmful than the incompetent who cannot hold the class together at all; for the mischief done by the former is not so easily apparent. As a test, then, of one's work, it is always better to ask, not only: "Have my pupils been thoroughly interested and hard at work all the lesson?" but also: "In what have they been interested?" And let us measure our progress more by the quality than the quantity; and the quality is to be measured by the resultant activity of the pupils. Another point is to be noted in this connexion: Although the interest awakened in a subject can never be too great, it can be given too lavishly and too soon. Interest should rather be a gradual acquisition of the pupil than the gift of the teacher, and Arnold's rule, never to give a piece of information till the class had earned it, although often impracticable, is very sound in principle. Some teachers have a feverish desire to pick out all the most interesting parts of a subject, and in so doing they are in danger of producing a kind of mental dissipation in their class, as if one should spend his time in reading only the *Review of Reviews*. The self-restrained patient teacher will get a far more permanent interest aroused, although it may not bear full fruit until his pupils are removed from his influence. How far more permanently interesting, for instance, is it to feel the difficulty of the character of Hamlet after reading and re-reading the play than to have the opinions of many commentators served up in a bright discourse! In order to illustrate the distinction between interesting and merely amusing a class, no subject in the curriculum is more appropriate than reading—that *bête noire* of the weak disciplinarian. Teachers are always trying to discover good reading-books, and publishers trying to meet the demand by fresh departures, many of them entirely mistaken from an educational point of view. The numbers of historical and geographical readers are a striking instance of the futile attempt to do two things at once. The old idea of combining penmanship and morality only raises a smile now; but the confusion of aim in a geographical reader is no less ludicrous. It must be admitted, however, that the choice of a reader is a difficulty. If too heavy and abstruse, there is little opportunity for the pupils' exercise in intelligent expression; on the other hand, if too easy and interesting, there is a hurry to get on to see what comes next. Considering the enormous output of story-books for children in the present day, there seems no need whatever to foster the taste for mere tales during school hours. The very short time that can be devoted to the reading lesson ought to be spent in an endeavour to render as well as possible pieces of distinct literary merit. Interest in the subject of the piece

will doubtless be aroused, but only the interest in the actual rendering of it should be counted unto the teacher for righteousness. The old-fashioned book of extracts had many points to recommend it; the fault lay in the sense of unreality that always attends an extract, divorced from its context and often meaningless in consequence. On the other hand, again, the whole of a standard work would not afford sufficient variety. This difficulty could be easily solved if the fetish notion that every pupil must be provided with a copy were broken down.

The following experiment was once tried in a class of girls, and by its means an hour of boredom to the pupils and misery to the teacher was rendered one of the pleasantest in the week. Each girl was told to come to the next lesson with a book of her own choosing (from the home or the school library) prepared to read a passage of it to her fellows. The choice was to be kept a secret till the appointed hour, when one by one the girls stood up and read their pieces, while the others listened critically in order to vote on the best at the end. Pathos and fun followed one another quaintly, and all were eager to hear, so that any inaudibility or indistinctness was quickly pulled up by the class. The teacher indeed had little to do but to look on, limit the time, and jot down critical notes. It need hardly be said that the competition became so keen that the pieces were thoroughly practised beforehand in private, to the immense advantage of the pupil. The voting was managed by each pupil assigning marks to each reader in turn. These were quickly added at the end, and the order of merit was announced. After this, the teacher gave a short criticism of each reader, and a general criticism on the votes of the class, pointing out her reasons for agreement or disagreement. Thus each member of the class was busy during the whole lesson, and busy on the right points. One incidental advantage may be mentioned, that the pupils saw the real book from which the extract was read, very often in a far more attractive edition than would be possible in a school book.

II. Another general principle to bear in mind is that the *various enthusiasms lying dormant in a class of children may be utilized*. After a little observation it will be noticed that one pupil revels in excessive neatness, another in getting through a large amount of work in a given time, another in showing somebody else how to do it, another in shortening his labour by various devices. Each of these virtues is usually allied to a complementary vice—the neat one is slow, the quick one inaccurate, and so on. Instead of fighting the vices, it is often more profitable to call attention to the virtues, as opportunity arises, in order that the whole class may be leavened by them. For instance, in the up-hill work of giving a class a thorough mastery of a rule in arithmetic, certain definite ideals should be put before them, and no one should consider that he knew the rule till each ideal was fulfilled. To be quick, to use the best methods, to be neat in work, to be so clear as to the why and wherefore that you could explain it to the first man in the street, to be absolutely accurate—these are the points for a class to aim at. Certain lessons are appropriate for emphasizing certain ideals, e.g., simplification of fractions is a good opportunity for the neat pupil to shine forth as an example. The quick, inaccurate worker should be made to do his example by two, or even three, different methods. Impatient at first, he will gradually become interested in making his answers correspond, and this will prove a greater spur to accuracy than being merely told that the answer is wrong and the example must be redone. It may be objected that a second method is often clumsy, as, for instance, when an addition of decimals is to be checked by adding the vulgar fractions; but the apparent waste of time is fully compensated by the training in accuracy, for it is assumed that the boy is already quick enough, and the boy is of far more importance than the example; though, to judge by many a teacher's procedure, one would hardly suppose so.

III. *The function of competition as an aid to discipline* is another leading point to be considered. Roughly speaking, competition does no harm if used only for sheer routine work, in which it is almost impossible to awaken a rational interest. An enormous amount of *memoriter* work in language-teaching comes under this head, where it is certainly true that "repetition is the teacher's sheet-anchor." But no subject is quite exempt from this burdensome duty, so distasteful to the brilliant teacher. Marks are by no means necessary for competition; but where they are not employed the teacher's utmost ingenuity is required to keep the work alive. The Jesuits were specially clever in this direction, and their methods are well worth attention. Their class-matches, for instance, where the pupils were divided into sides and challenged one another, are not so difficult to manage as they sound by the description; for the class thoroughly enjoys it and enters heartily into the orderly arrangement of details, and a pupil will learn his lesson to save his side from defeat much more readily than to save himself from detention. The choice of leaders and sides need not take place every lesson, but may hold for half a term, and even then need not be arranged in actual school hours; so that very little loss of time is occasioned.

When the pupils are widely varied in capacity, or at widely different stages in a subject, the common refuge is a subdivision. But subdivisions are always the mark of a young teacher who is anxious to suit every one: a case has been known of a class of five pupils in French, in three divisions. An experienced teacher never makes a division in a class if he can possibly avoid it; for he knows that it

means direct loss of time, loss of the "sympathy of numbers," confusion in setting preparation work, and distraction to every one in the room owing to the varied work going on. With very rare exceptions, the class can be made to work together somehow; there will be a loss, no doubt, to a few pupils, but not the loss equal to that caused by a subdivision. In language-teaching the old fetish order of noun, adjective, pronoun, &c., can be entirely discarded. If one pupil has never done his adjectives, let him, nevertheless, plunge into the pronouns with the rest. The boy who is far ahead of the others is harder to deal with than the one who is behind. If he is obliged to work by himself for the greater part of the lesson, a pleasant change for every one can be made by putting him up to be questioned in turn by all the others; they will be glad to humble him, and he will endeavour to stand the fire with easy nonchalance. Work at a map in geography affords a good opportunity for this device. As for the inevitable group of backward pupils, repetition of verbs, &c., should often be done together by the whole class, for their benefit, the mere volume of sound being very helpful to the weak memories. A point often overlooked with regard to the backward is that they should frequently be allowed to join in the chorus, or answer single questions with their books open before them. It is far better that they should do this than give wrong or muddled answers; of course the rest of the class will see the reason of this and tolerate it easily.

## CORRESPONDENCE.

### THE FRANCES MARY BUSS SCHOOLS.

(NORTH LONDON COLLEGIATE AND CAMDEN SCHOOLS FOR GIRLS.)

To the Editor of the Educational Times.

DEAR SIR,—The fiftieth anniversary of the foundation of these schools falls on the approaching fourth of April. As the establishment of the North London Collegiate School in 1850 marks the first step in the development of the reformed system of girls' schools, which has characterized the half-century, and as the name of its founder stands in the foremost rank of the reformers, it is felt that the occasion may fitly be celebrated as a time of jubilee in the wider as well as in the narrower sense. We, therefore, invite you to take part in the proposed celebrations, and we shall have much pleasure in sending cards of invitation, with all particulars, on hearing from you of your desire to be present. A service of commemoration and thanksgiving will be held in St. Paul's Cathedral on the evening of April 3. Receptions will be held at the Schools in the afternoon and evening of the following day, which is the Day of Jubilee, in the course of which the commemoration music will be sung by the school choir in the Great Hall. We specially desire your co-operation in the Cathedral service.

WILLIAM LATHAM, Chairman of the Governors.  
ALFRED J. BUSS, Clerk to the Governors.  
SOPHIE BRYANT, Headmistress, N.L.C.S.G.  
FANNY J. LAWFORD, Headmistress, C.S.G.

Sandall Road, Camden Road, N.W.

### UNIVERSITY OF LONDON SENATORIAL ELECTIONS.

To the Editor of the Educational Times.

SIR,—The new Senate of the reconstituted University of London is to be appointed in May next, and as sixteen members, or about one-third of the whole, are assigned to Convocation for election, there is now a good opportunity for securing an improved representation of the interests of secondary education in the Governing Body of the University. A Committee has been appointed by the Incorporated Association of Headmasters, to which representatives of the various associations working for secondary education have been co-opted; and, as it will be important to have the active co-operation of all London graduates who are in sympathy with the object, you will render great service by making known that only "registered graduates"—i.e. Members of Convocation—will be able to vote. Under the new statutes, the elections will be by means of voting papers—transmissible by post—and in the several Faculties as follows:—Six Senators to be elected by Arts graduates, six by Science, two by Medicine, and one each by Law and Music. Those graduates who are not yet in Convocation are strongly urged to enrol themselves; and it should be known that all Doctors and Masters are immediately eligible, but Bachelors in Arts, Science, and Music must have graduated three years before acceptance; those in Law and Medicine two years. The fee is 5s. per annum, or a

life composition of £1. The application and fee should at once be sent to the Registrar.—I am, Sir, your obedient servant.

R. W. HINTON, Chairman of the Committee.  
Aske's Hampstead School for Boys, Cricklewood, N.W.

### THE BATTLE OF THE SCRIPTS.

To the Editor of the Educational Times.

SIR,—Mr. Joseph Deedy has done good service in collecting particulars as to the pronunciation of Latin affected at thirteen of our secondary schools. Let me offer your readers a summary. 1 means *ā* pronounced as in *father*; 2, as in *fate*. 3 means *c* and *g* before *e* and *i* as in *critic*, *gift*; 4, as in *city*, *gypsy*. 5 means *c* before *e* and *i* as in *violoncello*. Charterhouse, 2, 4; Cheltenham, 2, 3; Christ Church, Oxford, unsettled; Christ's Hospital, 1, 3; Downside College, Bath, 1, 4, 5; Dulwich, 2, 3, 4; Eton, 2, 4; Maynooth, 1, 4, modified Italian; Rugby, 1, 2, 3; Stonyhurst, 1, 4; Westminster, 2, various; Whitgift, Croydon, 2, 4; Winchester, 1, 4.

Mr. Deedy brings up what to me seem unanswerable arguments for 1 and 3. Latin has no *k*—*c* served its purpose; many words beginning with *ce* and *ci* are almost identical with the Greek from which they were taken, as *cetus*, *ketos*; *circus*, *kirkos*; *ceru*, *keros*; *coelum*, *koilos*. In the verb *dico*, *dicis*, *dicit*, the first form has the letter *h*; logically, the others would have it so, too; and, further, it must continue so to explain the perfect, *dixi* (*diksi*). Note, similarly, *virgo*, *virginis*; *rex*, *regis*; *dux*, *ducis*; *lego*, *legis*, *lexi*, *lectum*. There are many other arguments. As regards the vowels, the results of comparisons with other languages are all in favour of the "Roman values," as in *father*, *reign*, &c.

Will you let me take this opportunity of saying that I shall be happy to send, post paid, to any reader of the *Educational Times* interested in this matter, a copy of my little book of tables of "the sounds of speech," issued in connexion with "International Phonography," the current (15th) edition of "The Oxford Shorthand"?—Yours sincerely,

PERCY E. KINGSFORD.

Excelsior, Dover, January 18, 1900.

To the Editor of the Educational Times.

DEAR SIR,—The heads of secondary schools are interested to know the result of the second year's competition between the Script and Pitman systems conducted by Mr. Easterbrook in the Owen's School, Islington. I now enclose you copy of Mr. Easterbrook's report. The result of the first year's competition was the subject of editorial notice in 1898 in *Education*, the *Educational Times*, the *Journal of Education*, and other educational journals; but, as the competition was in the elementary stages, only the results in the more advanced stages have been looked forward to by those interested in the shorthand question. Mr. Easterbrook's experiment, extending over two years, is the first of the kind that has ever taken place, and we trust that you will deem it worthy of notice.—Yours faithfully,

January 16, 1900.

F. STRATFORD MALONE,  
Secretary, Script Shorthand Co., Ltd.

Owens School, Islington.

December 14, 1899.

The results of the second year's teaching of the parallel classes in shorthand are as follows:—The Pitman class consisted of nine boys and the Script class of five boys; but, for purposes of strict comparison, I ought, perhaps, to omit from the latter class one pupil who had learnt a little of the system before he joined our class, although it was very little indeed. This pupil obtained 123 marks, being at the head of the list. They were examined in reporting two passages—one read to them at sixty words a minute and the other at seventy words a minute. The marking, in order of merit, was as follows:—(Total—130 marks) Script pupil, 121 marks; ditto, 115; Pitman pupil, 110; ditto, 108; Script pupil, 103; Pitman pupil, 61; Script pupil, 29. The remaining six pupils, all from the Pitman Class, could do practically nothing with the passages.

J. EASTERBROOK, Headmaster.

To the Editor of the Educational Times.

SIR,—Your number of February, 1899, recorded a lecture on shorthand by Sir Edward Clarke, in the course of which he recommended the old "Taylor" system as being specially easy of acquisition and reliable in practice. In the recent College of Preceptors' Examination (December, 1899) my pupil, Charles Bryan, who passed in the First Division of the Second Class, scored a rather remarkable success in shorthand. He began the study of the Taylor system less than eight weeks before the date of the examination, and, in acquiring facility, had to rely largely on copying practice. Owing to the demands of other subjects, we were unable to devote more than twenty minutes a day to dictation.—Yours faithfully,

37 Gillingham Street, Eccleston Square, S.W.

January 22, 1900.

HUGH W. INNES, LL.B.

# From Mr. Murray's Educational List.

## MURRAY'S HANDY CLASSICAL MAPS.

### LIST OF MAPS NOW READY.

GALLIA	One sheet, 2s. cloth; 1s. net paper.	BRITANNIA	One sheet, 2s. cloth; 1s. net paper.
ITALIA { NORTHERN ITALY	Two sheets in one case, 3s. cloth; 1s. 6d. net paper.	HISPANIA	One sheet, 2s. cloth; 1s. net paper.
{ SOUTH AND SICILY }			

### MAPS AT PRESENT IN PREPARATION.

GRAECIA { NORTHERN GREECE	Two sheets in one case, 3s. cloth; 1s. 6d. net paper.	THE ROMAN EMPIRE (at different epochs)	Two Maps on one sheet, 2s. cloth; 1s. net paper.
{ SOUTH AND PELOPONNESUS }			
ASIA MINOR AND MARE AEGAEUM	Two Maps on one sheet, 2s. cloth; 1s. net paper.	PALESTINE, SYRIA, AND PART OF MESOPOTAMIA, AND A MAP SHOWING ST. PAUL'S VOYAGES	Three Maps on one sheet, 2s. cloth; 1s. net paper.
GHRMANIA, RHAETIA, ILLYRIA, MOESIA, &c.	One sheet, 2s. cloth; 1s. net paper.	EGYPT AND THE EASTERN EMPIRES	Two Maps on one sheet, 2s. cloth; 1s. net paper.

An Index is bound in each case.

\*. \* By cloth is meant that the map is both mounted on cloth and also bound in a cloth case. By paper is meant that the map is bound, unmounted, in a paper case. Where there are two or more maps on one sheet, there are also two or more indexes—one for each.

## AN IMPORTANT EDUCATIONAL WORK FOR CHILDREN.

**EARLY CHAPTERS IN SCIENCE.** A First Book of Knowledge of Natural History, Botany, Physiology, Physics, and Chemistry for Young People. By Mrs. W. AWDRY (Wife of the Bishop of South Tokyo, Japan). Edited by W. F. BARRETT, F.R.S., Professor of Experimental Physics in the Royal College of Science for Ireland. With nearly Two Hundred Illustrations. Crown 8vo, 6s.  
 "Deserves a warm welcome from all teachers of the young. . . . The illustrations are models of clear, careful, and unconventional work."—*Literature*.  
 "It can be confidently recommended to the young as a sound and pleasantly written introduction to science."—*Guardian*.

### SIR WILLIAM SMITH'S EDUCATIONAL SERIES.

#### Latin Course.

- The Young Beginner's Course.** 2s. each.
- I. First Latin Book.** Grammar, Easy Questions, Exercises, and Vocabulary.
- II. Second Latin Book.** An Easy Latin Reading Book, with Analysis of Sentences.
- Principia Latina.** PART I. Containing Grammar, Delectus, Exercise Book, Vocabulary, &c. Thirty-eighth Edition. 3s. 6d. APPENDIX TO PART I. Additional Exercises and Examination Papers. 2s. 6d. PART II. A First Reading Book. 3s. 6d. PART III. A First Verse Book. 3s. 6d. PART IV. Prose Composition. 3s. 6d. PART V. Short Tales and Anecdotes for Translation into Prose. 3s. 6d.
- Students' Latin Grammar.** For the Use of Colleges and the Higher Forms in Schools. Fifteenth Edition. Thoroughly Revised and partly Re-written. 6s.
- Smaller Latin Grammar.** For Middle and Lower Forms. 3s. 6d.

- III. Third Latin Book.** Exercises on the Syntax, with Vocabulary.
- IV. Fourth Latin Book.** A Latin Vocabulary for Beginners, arranged according to Subjects and Etymologies.

**Translation at Sight:** or, Aids to Facility in the Translation of Latin. Passages of Graduated Difficulty, carefully Selected from Latin Authors, with Explanations, Notes, &c. By Prof. T. D. HALL, M.A. Crown 8vo, 2s.

**A Child's First Latin Book.** Comprising Nouns, Pronouns, and Adjectives, with the Verbs. With ample and varied Practice of the easiest kind. Both Old and New Order of Cases given. By T. D. HALL, M.A. Enlarged Edition, including the Passive Verb. 16mo, 2s.

#### English Course.

- School Manual of English Grammar.** With Historical Introduction, copious Exercises, and Appendices. 3s. 6d.
- Primary English Grammar for Elementary Schools.** With numerous Exercises and carefully graduated Parsing Lessons. 1s.
- Manual of English Composition.** With Illustrations and Practical Exercises. 3s. 6d.

#### French Course.

- French Principia.** PART I. Grammar, Delectus, Exercises, Vocabulary, and Materials for Conversation. 3s. 6d. APPENDIX TO PART I. Additional Exercises and Examination Papers. 2s. 6d. PART II. A French Reading Book, with Etymological Dictionary. 4s. 6d. PART III. Prose Composition. 4s. 6d.
- Students' French Grammar.** Practical and Historical. For the Higher Forms. With an Introduction by M. LITRE. 6s.
- Smaller French Grammar.** For the Middle and Lower Forms. 3s. 6d.

**French Stumbling Blocks and English Stepping Stones.** By FRANCIS TARVER, M.A., late Senior French Master at Eton College. Feap. 8vo, 2s. 6d.

#### German Course.

- German Principia.** PART I. Grammar, Exercises, Vocabulary, and Materials for Conversation. 3s. 6d. PART II. Reading Book, with Dictionary. 3s. 6d.
- Practical German Grammar.** For Advanced Students. 3s. 6d.

#### Greek Course.

- Initia Græca.** PART I. A First Greek Course, containing Accidence, Rules of Syntax, Exercises, and Vocabulary. Edited and carefully Revised throughout by FRANCIS BROOKS, M.A., Lecturer in Classics at University College, Bristol, and formerly Classical Scholar of Balliol College, Oxford. 3s. 6d. APPENDIX TO PART I. Additional Exercises and Examination Papers. 2s. 6d. PART II. A Reading Book. 3s. 6d. PART III. Prose Composition. 3s. 6d.
- Students' Greek Grammar.** For the Higher Forms. 6s.
- Smaller Greek Grammar.** For Middle and Lower Forms. 3s. 6d.
- Greek Accidence.** 2s. 6d.

#### Italian Course.

- Italian Principia.** PART I. Grammar, Delectus, Exercises, Vocabulary, A New Edition, thoroughly Revised and in part Re-written. By C. F. CORCIA, Professor of Italian in the University of Oxford. 3s. 6d. PART II. A Reading Book. 3s. 6d.

### SIR WILLIAM SMITH'S SCHOOL DICTIONARIES.

- Smaller Latin-English Dictionary.** With a Dictionary of Proper Names. Thirty-eighth Edition. 7s. 6d.
- Smaller English-Latin Dictionary.** A companion to the foregoing. 7s. 6d.
- Concise Dictionary of Greek and Roman Antiquities.** Thoroughly revised and in the most part re-written (1898) by F. WARRE CORNISH, M.A., Vice-Provost of Eton. Profusely Illustrated from the best examples of Objects of Antiquity. Medium 8vo, 21s.
- Smaller Dictionary of Greek and Roman Antiquities.** Abridged from his larger Dictionary. With 200 Woodcuts. Crown 8vo, 7s. 6d.
- Classical Dictionary of Mythology, Biography, and Geography.** Compiled from his larger Dictionaries. With 750 Woodcuts. 8vo, 18s.
- Smaller Classical Dictionary.** Abridged from the above Work. With 200 Woodcuts. Crown 8vo, 7s. 6d.
- Concise Dictionary of the Bible.** Condensed from the larger Work. For Families and Students. With Maps and 300 Illustrations. Medium 8vo, 21s.
- Smaller Dictionary of the Bible.** Abridged from the larger Work. For Schools and Young Persons. With Maps and Illustrations. Crown 8vo, 7s. 6d.
- English-Latin Gradus or Verse Dictionary for Schools.** By A. C. AINGER, M.A., Trinity College, Cambridge, Assistant-Master at Eton College, and the late H. G. WINTLE, M.A., Christ Church, Oxford. Crown 8vo, 9s.

### SIR WILLIAM SMITH'S SMALLER MANUALS.

- A Smaller History of England.** From the Earliest Times to 1887. Revised by RICHARD LONGE, Professor of Modern History in the University of Glasgow, formerly Fellow of Brasenose College, Oxford. With 4 Coloured Maps, 14 Plans, and 68 Woodcuts. Crown 8vo, 3s. 6d.
- A Smaller History of Greece.** From the Earliest Times to the Roman Conquest. Revised by G. E. MARINDIN, M.A., sometime Assistant-Master at Eton College. With 2 Coloured Maps, 12 Plans, and 5 Illustrations. Crown 8vo, 3s. 6d.
- A Smaller History of Rome.** From the Earliest Times to the Establishment of the Empire. Revised by A. H. J. GREENIDGE, M.A., Fellow of Hertford College, Oxford. With Coloured Map, 6 Plans, and 66 Illustrations, many from Photographs of Italy at the present day. Crown 8vo, 3s. 6d.
- A Smaller Ancient History of the East.** From the Earliest Times to the Conquest of Alexander the Great, including Egypt, Assyria, Babylonia, Media, Persia, Asia Minor, and Phœnicia. By PHILIP SMITH, B.A. With 70 Woodcuts. Small crown 8vo, 3s. 6d.
- History of English Literature.** Giving a Sketch of the Lives of our Chief Writers, and an Account of their Works. By JAMES ROWLEY. Small crown 8vo, 3s. 6d.
- Short Specimens of English Literature.** Selected from the Chief Authors, and arranged Chronologically, from the earliest Saxon Chronicles to the Middle of the Nineteenth Century. With Explanatory Notes. By JAMES ROWLEY. Small crown 8vo, 3s. 6d.
- A Smaller Manual of Ancient Geography,** drawn up chiefly for the Lower Forms in Schools. By Canon BEVAN, M.A. With 30 Woodcuts. Small crown 8vo, 3s. 6d.
- A Smaller Scripture History of the Old and the New Testament.** With Coloured Maps and many new Illustrations from Photographs. Small crown 8vo, 3s. 6d.
- A Smaller Classical Mythology.** Illustrated with Translations from the Ancient Poets and Questions on the Work. By H. R. LOCKWOOD. With 90 Woodcuts. Small crown 8vo, 3s. 6d.

### MRS. MARKHAM'S CELEBRATED HISTORIES.

- A History of England.** From the First Invasion by the Romans down to the Year 1878. With Conversations at the end of each Chapter. With 100 Woodcuts. Crown 8vo, 3s. 6d.
- A History of France.** From the Conquest of Gaul by Julius Caesar down to the Year 1878. With Conversations at the end of each Chapter. With 70 Woodcuts. Crown 8vo, 3s. 6d.
- A History of Germany.** From its Invasion by Marius down to the completion of Cologne Cathedral in the year 1880. With 50 Woodcuts. Crown 8vo, 3s. 6d.

Mr. Murray's Illustrated Educational List can be obtained post free on application.

## MACMILLAN & CO.'S NEW EDUCATIONAL BOOKS.

### MACMILLAN'S MANUALS FOR TEACHERS.

**The Logical Bases of Education.** By J. WELTON, M.A., Professor of Education in the Yorkshire College, Victoria University. Globe 8vo, 3s. 6d.  
\* \* \* This book meets the requirements of the Teachers' Certificate Examination.  
*Educational Times*.—"Mr. Welton has written distinctively well on logic, but we are inclined to think that he has never produced anything better than this succinct and lucid exposition of the application of logical method to educational purposes. The volume appears in a series of 'Manuals for Teachers.' . . . It will be an admirable series if the rest of the volumes come anywhere near the excellence of this one."

### GRADUATED SERIES OF ENGLISH GRAMMARS.

By J. C. NESFIELD, M.A. For use in Secondary Schools.

**The Uses of the Parts of Speech.** Price 6d., cloth. A general outline, with a large number of Exercises, showing the main purpose or purposes for which each part of speech is used in the construction of a sentence. For the use of students up to the age of ten or thereabouts.

**Outline of English Grammar.** Price 1s. 6d., cloth. A short and easy guide to Accidence, Parsing, Analysis of Sentences, Conversion of Sentences from one form to another, Sequence of Tenses, Analysis of Words, the Sounds, Symbols, and Spellings in present use, the origin and history of the chief inflexions and of words in common grammatical use. With copious and carefully graded Exercises throughout.

**Manual of English Grammar and Composition.** Price 2s. 6d., cloth. A guide to Parsing and Analysis, Composition, the Figures of Speech, Enlargement of the Vocabulary by Allusions and Metaphors, the main divisions of Prose Composition, the peculiarities of Poetic Diction, and an outline of the History of the Language. With copious and carefully graded Exercises.

KEY TO MANUAL OF ENGLISH GRAMMAR AND COMPOSITION. [In the press.]

**English Grammar Past and Present.** Price 4s. 6d., cloth. A full account of Modern English Grammar, some peculiarities of Idiom and Construction, the Origin and Growth of English, a History of Sounds, Symbols, Spellings, and Accents, the Growth of Accidence from Anglo-Saxon and other sources, the origin and use of Prefixes and Suffixes. With Appendices on Prosody, Synonyms, the Changed Meanings of Words, and other outlying subjects. With copious and carefully graded questions selected from the London Matriculation Examinations.

### MACMILLAN'S ENGLISH CLASSICS.—New Volume.

**Dryden.—The Hind and the Panther.** With Introduction and Notes by W. H. WILLIAMS, M.A., formerly Scholar of Trinity College, Cambridge, Professor of Classics and English Literature in the University of Tasmania. Globe 8vo, 2s. 6d.

**The Gospel according to S. Luke in Greek, after the WESTCOTT and HORT Text.** Edited, with Parallels, Illustrations, various Readings, and Notes, by the Rev. ARTHUR WRIGHT, M.A., Vice-President of Queens' College, Cambridge. Demy 4to, 7s. 6d. net.

Second Edition. Now ready.

**The Iliad.** Edited, with Apparatus Criticus, Prolegomena, Notes, and Appendices, by WALTER LEAF, Litt.D., sometime Fellow of Trinity College, Cambridge. Vol. I.: Books I. XII. 8vo, 18s. [Classical Library.]

**Introduction to Physical Chemistry.** By JAMES WALKER, D.Sc., Ph.D., Professor of Chemistry in University College, Dundee. 8vo, 10s. net.

**The Principles of Mechanics presented in a New Form.** By HEINRICH HERTZ, late Professor of Physics in the University of Bonn. With an Introduction by H. VON HELMHOLTZ. Authorized English Translation by D. E. JONES, B.Sc., District Inspector under the Department of Science and Art, &c., and J. T. WALLEY, M.A. 8vo, 10s. net.

**Text-Book of Paleontology.** By KARL A. VON ZITTEL, Professor of Geology and Paleontology in the University of Munich. Translated and Edited by CHAS. R. EASTMAN, Ph.D., Assistant in Paleontology in the Museum of Comparative Zoology at Harvard. With numerous Illustrations. Medium 8vo, 25s. net.

\* \* \* This English Edition is revised and enlarged by the Author and Editor in collaboration with numerous Specialists.

### THE PLAYS OF SHAKESPEARE.

CONTENTS:—Chief Events in the Life of Shakespeare—Shakespeare's Works—Introduction—Date and Early Editions—Source of the Plot—Sketch of the Plot—Sketches of the Principal Characters—Literary Notes—Notable Passages—Proverbial Expressions and Familiar Quotations—The Text—Miscellaneous Notes—Notes on the Language of the Play—Etymological Notes—Proper Names—Examples of Paraphrasing—Examples of Analysis of Sentences—Anachronisms and a few Typical Questions selected from various Examinations.

#### REVIEWS:—

*Saturday Review*.—"Mr. Page has edited 'English Classics' in a manner to command approval."

Sir HENRY IRVING.—"A most faithful and scholarly edition."  
*Daily Telegraph*.—"Julius Caesar" . . . is invaluable as an aid to the study of the play."

*South Africa*.—"What a handy 'book of the play' they form!"  
*Student's Friend, Bombay*.—"Decidedly the very best for students, be they Indian or English."

*Athenaeum*.—"Essentially books for students."  
*Educational News*.—"It would be difficult to imagine anything more perfect than this edition of 'Macbeth.'"

## FORECASTS AND COMMENTS.

March 1, 1900.

THE Professional Preliminary Examination of the Fixtures. College of Preceptors, for certificates recognized by the Education Department and various professional bodies, will be held on March 6-8.

PROF. SULLY's course of weekly lectures on "Intellectual Education"—the first course of the twenty-eighth annual series of Lectures for Teachers at the College of Preceptors—began on February 22. The second lecture will be delivered this evening at 7 p.m.

THE next Evening Meeting of members of the College of Preceptors will take place on Friday, March 16, when Mr. Arnold-Forster, M.P., will introduce a discussion on "Maps—what they are and what they ought to be." The lecture and discussion promise to be exceptionally interesting, and it is expected that a number of distinguished geographers and cartographers will be present. Dr. Scott Keltie, Secretary of the Royal Geographical Society, will take the chair.

ON March 2 and the five following Fridays, Miss F. M. Purdie, of Newnham College, will lecture (to women only), at the Home and Colonial Training College, Gray's Inn Road, on "Phonetics and their Uses in English and Foreign Language Teaching." These lectures are given by the trustees of the late Miss Soames, in pursuance of her work in English and foreign phonetics. They will deal with the methods and aims of phonetics generally, and will also describe the Soames Phonetic Method of teaching children to read. A syllabus will shortly be ready, and may be obtained from Miss Verrall, 26 Gloucester Place, Brighton (Soames Trustee). Admission to the lectures is free, and all teachers are specially invited.

AS the rooms lately occupied by the School of Art Wood-Carving in the Imperial Institute buildings have been handed over to the London University, the day classes, and a special Saturday afternoon class for pupils who cannot otherwise attend, will, after March 1, be carried on in the North Gallery of that building. The evening classes will, necessarily, for the present be closed. Some of the free studentships, maintained by means of funds granted to the school by the City and Guilds Institute and the Worshipful Company of Drapers, are vacant, and forms of application for these, and further particulars relating to the school, may be obtained from the manager, Miss Rowe.

AT the Royal Institution, on March 22, Mr. H. J. Mackinder, M.A., F.R.G.S., will deliver the first of a course of three lectures on "Equatorial East Africa and Mount Kenya," in the place of Mr. E. A. Fitzgerald, who is unable to deliver his lectures owing to his departure for South Africa.

THERE will be examinations this month for fifteen major scholarships, and for exhibitions and sizarships, at Trinity College, Cambridge, and for entrance scholarships at Magdalene and Selwyn.

A SCHOLARSHIP of £50 a year will be offered for competition on the results of an examination in classics, open to candidates

for entrance and to students in their first year, to be held at Newnham College on March 14 and two following days. The scholarship is tenable for three years from entrance. The Mathilde Blind Scholarship of £50 a year for three years will be offered for competition to candidates intending to take a three years' Honours course in literature on the results of an examination to be held at Newnham College on June 13 and two following days. Candidates will not be eligible for this scholarship unless they are qualified in mathematics for entrance to the college.

\* \* \*

THE Easter Conference of the Private Schools' Association will be held at Oxford during the week commencing April 24.

Education  
Gossip.

THE small Committee representing the Education Department and the Treasury, which was appointed on the passing of the Board of Education Act to reorganize the work hitherto carried on in Whitehall, at South Kensington, and at Gwydyr House, and to provide for the new administration which will be necessary under the above-mentioned Act, is understood to have virtually completed its task. The Committee has taken a long adjournment, and apparently little remains to be done except to make the definite appointments which will complete the new staff of the Education Department in its several subdivisions.

\* \* \*

THE Government are, doubtless, well aware of the importance which is attached by secondary schoolmasters, and by all who understand the question of English education as a whole, to the efficient organization of the Secondary Education Department of the new Board. We may also trust that they have been careful to mark the necessary distinction between such secondary education as will be based, in the main, on technical instruction—which must needs be encouraged by Departmental grants, and which may be treated on the lines of direct continuation from the elementary schools—and that other kind of secondary education, whose basis is mainly literary, which is pursued in the public schools, endowed or proprietary, and in private schools, and which could not possibly be treated on the same lines of continuation.

\* \* \*

THERE are, unfortunately, many bodies and individuals who do not, even yet, perceive this necessary distinction, or who deliberately ignore it, as though their masterful way of ignoring the laws of gravity would succeed in making water run up-hill. They talk too often as if every secondary school ought to be graded on to the Government elementary schools. It is absolutely impossible.

\* \* \*

SECONDARY education will depend for its encouragement and control on a secondary and non-technical Department of the Board, on the Under-Secretary of that Department, and on the Consultative Committee. The distinction has been partly recognized and provided for by the new Act; and the secondary profession of teachers are now looking, not without anxiety, for the appointment of the permanent Secondary Assistant-Secretary. There ought to be no question about the appointment of an official who has a thorough knowledge of the literary schools, who is in touch with the organized secondary bodies, and who would inspire confidence in the secondary profession.

\* \* \*

WHEN our next number makes its appearance, the Education Board will be constituted and at work. The first of April is the date on which the Act is to come into operation. Parliament is not trivial enough to make *poissons d'Avril* of the educational world; but it is amusing, none the less, to find that the date on which the Board of Education is to set about its administrative work is a Sunday.

\* \* \*

We fear that Sir Philip Magnus has had to pay dearly for the

vindication of his right to sit as a member of the Court of Governors of the Worshipful Company of Plumbers; but it may be supposed that the costs of the long litigation will follow the decision of Mr. Justice Farwell on February 19. May we also suppose that the Court of Governors will accept the judge's sensible advice, and avail themselves of Sir Philip's able assistance in the future?

\* \* \*

TWO exhibitions (one of the value of £50, and one of the value of £30) will be offered by Trinity College, Cambridge, to candidates selected for admission to the Civil Service of India at the open competitive examination held in August, 1900. The first of these exhibitions is open only to those whose names are placed not lower than twenty-fifth on the official list of selected candidates, and who either are members of Trinity College or are not members of any college in Cambridge or Oxford. The second of these exhibitions is open only to members of Trinity College whose names are placed on that list.

\* \* \*

PRIZES, each of the value of £10, are offered by Trinity College to those among the candidates selected at the open competitive examination held in 1900 who during each term of their year of probation have resided at the college, and who, in the "Final Examination" to be held in 1901, pass highest in Arabic, Sanscrit, or Persian, provided that they obtain at least three-fifths of the total marks given for those languages respectively.

\* \* \*

THE Mathematical Association held its annual general meeting at University College on Saturday, January 27, when papers were read by the President, Sir Robert S. Ball, Prof. R. W. Genese, and Messrs. R. F. Davis and J. A. Third. It was announced that the *Mathematical Gazette*, the second volume of which commences with the present year, would in future be issued six, instead of three, times a year. The *Gazette* will contain articles suggestive of improvements in methods of teaching, or covering ground not satisfactorily treated in text-books, reviews of mathematical books of the first importance, together with shorter notices of new text-books, elementary mathematical notes, problems, and any other matter of direct interest to mathematical teachers.

\* \* \*

A REQUEST of £20,000 has been made to the New College, Hampstead (now a constituent college of London University), under the will of the late Mr. Henry Vaughan. This is the largest amount ever bequeathed to a Congregational college. New College is the best endowed of any of the colleges of the Congregational denomination. The present Principal is the Rev. R. Vaughan Price, M.A., who succeeded Dr. Samuel Newth in 1889.

\* \* \*

IT is far better to lower the fees, when possible, than to lose pupils. It appears that the number of students at the Guildhall School of Music has during the past year or two fallen off, and the number of new pupils for the spring term is nearly 30 per cent. less than in the corresponding period of 1896. A report has been presented on the subject to the Court of Common Council, and the recommendation has been made that the entrance fees of pupils shall be lowered, and the fees of the professors slightly increased. The students even now exceed three thousand.

\* \* \*

THE Lord President of the Committee of Appointments and Vacancies. Council has appointed Sir William Richmond, K.C.B., R.A., Mr. T. G. Jackson, R.A., Mr. E. Onslow Ford, R.A., and Mr. Walter Crane as a Council to advise the Department of Science and Art on art matters relating to art schools and classes, the Art Museum, and the Royal College of Art. He has also appointed Mr. A. Spencer, Headmaster of the Municipal School of Art, Leicester, to be Headmaster of the Royal College of Art.

THE Principalship of Aberdeen University has been vacated by the sudden death of Sir William Geddes, LL.D. Sir William was formerly Professor of Greek at Aberdeen, and became Principal in 1885.

\* \* \*

MR. KAHN has been appointed Master of the Commercial Side of University College School, under the arrangement recently made between the authorities of the school and the Technical Education Board of the London County Council.

\* \* \*

DR. N. TIRARD, who has been appointed Professor of Physiology at King's College, London, has resigned his Examinership in Natural History in the College of Preceptors.—Mr. G. T. Moody, D.Sc., F.C.S., has been appointed one of the Examiners in Chemistry in the College of Preceptors, in the place of Prof. W. N. Hartley, F.R.S., who has retired.

\* \* \*

AT Oxford Mr. C. H. Firth, M.A. Balliol College, has been elected Ford Lecturer in English History for the ensuing academical year.

\* \* \*

THE Vice-Chancellor of Cambridge University announces that he has appointed Mr. Frederic Harrison, M.A., Hon. Fellow of Wadham College, and Professor of Jurisprudence to the Inns of Court, as Rede Lecturer for the present year.

\* \* \*

THE REV. F. H. CHASE, D.D. of Christ's College, Cambridge, has been elected Hulsean Lecturer for 1900-1.

\* \* \*

THE Professorship of Medicine at Edinburgh University is vacant by the death of Sir T. Grainger Stewart.

\* \* \*

MR. JAMES MAIR, M.A., has been appointed Headmaster of Banff Public School, in succession to Dr. Wilson.

\* \* \*

Literary Gossip. No two opinions would coincide as to the best twenty or fifty books on the history, theory, and practice of education. The question is one of much importance, and, if our readers—many of whom are competent to form a valuable judgment on this subject—would try their hands at a selection, the result could not fail to be interesting. We observe that the School Board for London has forwarded to the public libraries of the Metropolis a list, drawn up by experts of the Board, of books for teachers and others interested in the history or theory and practice of education, with the suggestion that the books be added to the libraries. The books recommended are fifty-eight in number, and cover a wide field, from Tylor's "Anthropology" and Mill's "System of Logic" to Froebel's "Mother-Play" and Heerwart's "Course of Paper Folding." It is satisfactory to know that in most libraries many of the books proposed are already on the shelves.

\* \* \*

CONSIDERING the eminence of St. Paul's as a first-grade classical school, it is not surprising to find that eight out of thirty-four editors of the new "Scriptorum Classicorum Bibliotheca Oxoniensis" (Clarendon Press), to which we draw attention in one of our reviews of this month, are either Old Paulines or past or present masters at St. Paul's.

\* \* \*

THE Bill permitting the optional use of the English language in the Jersey "States" was carried by a large majority. The language question in Austria (shall we add in the Transvaal?) is not to be so easily settled. Meanwhile our Celtic brethren are pushing their own language question for all it is worth. Though we have no great idea of its importance, we will quote from an Irish paper the strongest argument which we have yet seen in favour of the teaching of Irish to Irish children.

Any one who knows the language of Ireland, with its magnificent list of 60,000 townland and other place names, has opened up for him a new field of vivid interest and pleasure. These fine names will stand

for ever as a monument of the beauty and variety of our language, and the poetic and imaginative faculties of our ancestors. But to those who do not know Irish they are of course incomprehensible. It is strange for people to live in their own country and not to know the meaning of their surroundings.

\* \* \*

THE death of Mr. H. D. Traill is a loss to English letters and a loss to *Literature*, which he edited with much ability. He was an Oxford Honour-man, and began his London career by working in the Education Department.

\* \* \*

THE Oxford Delegacy for the Extension of University Teaching give some interesting particulars in their report for last year. No fewer than 1,231 lectures were delivered by thirty-four lecturers in 119 local centres. The lecturers on literary subjects were the Revs. J. G. Bailey, R. Bayne, and W. Tuckwell, and Messrs. F. S. Boas, R. W. Bond, W. G. de Burgh, E. L. S. Horsburgh, R. Ashe King, J. A. R. Marriott, W. Alison Phillips, J. C. Powys (the newest edition to the ranks), and E. de Sélin-court. The gross average attendance at lectures was 4,376; the average per centre being 104. Judged by the average attendance, the most popular lectures were the following:—Mr. Marriott's "English Novelists," at Cheltenham, evening lectures, average attendance, 315; Mr. Horsburgh's "Shakespeare," at Bolton, evening lectures, 312; Mr. King's "English Novelists," at Gloucester, evening lectures, 220, and Mr. Marriott's "English Novelists," at Redditch, evening lectures, 200.

\* \* \*

WITH regard to our notice, in January, of Prof. Schoenfeld's "Schiller's Maria Stuart" (Macmillan), we are assured by Dr. Schoenfeld that he has not used Dr. Buchheim's edition at all. There is so much common material for Schiller criticism that we can quite understand coincidences. Certainly, our reviewer had no intention whatever of implying that other editions had been unfairly used. Dr. Schoenfeld also informs us that he had very high authority for coupling the quotation "Nihil est in intellectu quod non prius fuerit in sensu" with Catholic symbolism. Possibly he is right; its most usual application is certainly to the philosophy which maintains that all knowledge comes through the senses, and that there are no such things as innate ideas.

\* \* \*

MR. W. B. CLIVE announces a new "History of Greece," by W. J. Woodhouse, M.A., Lecturer in Ancient History and Political Philosophy in the University of St. Andrews, sometime Craven Fellow in the University of Oxford, and author of "Aetolia: its Geography, Topography, and Antiquities." This book is intended primarily for those who are studying in outline the history of Greece down to the death of Alexander for examinations such as the London University Intermediate Arts and B.A. It will also be found useful in schools where Greek history is offered for the Locals or the Oxford and Cambridge Board Examination.

\* \* \*

THE same publisher will shortly produce "The Tutorial History of English Literature," by A. J. Wyatt, M.A., joint author of "The Intermediate Text-Book of English Literature." The common complaint against smaller histories of literature is that they attempt too much, and fail to preserve due proportion between the greater and lesser writers. Mr. Wyatt has only incidentally included the lesser names. The work of our great writers has been described many times: here the attempt is made not only to describe again the work of our great writers for its own sake, but through it to tell the story of our literature as a whole. Illustrative extracts form a prominent feature in the book, and will, it is believed, considerably add to its educational value.

\* \* \*

IN "The Story of the Nations" the history of Italy is divided into three separate volumes, "The Tuscan Republics," "Venice," and "Modern Italy," the last of which Mr. Fisher Unwin will

publish next week. It gives a clear account of Italy during the last hundred and fifty years. The author is Prof. Orsi, Professor of History in the Reale Liceo Foscarini, Venice, and already favourably known as the author of a short history of Italy and other scholarly work.

### THE LICENSING OF TEACHERS.

At the evening meeting of the members of the College of Preceptors, held at the College on February 14, with the Rev. J. O. Bevan in the chair, Prof. FOSTER WATSON read a valuable historical paper on "The Licensing of Teachers in England in the Past." We regret that we are unable to report this lecture in full.

Prof. Foster Watson's introduction was in the following terms:—

"Not a man in Europe," says Cardinal Newman, "who talks bravely against the Church but owes it to the Church that he can talk at all." It is only when we come to read the history of the middle ages that we realize the full import of what Newman asserts. And, whatever may be said on the subject by partisans, the impartial historian of education will always gladly recognize the glorious part played by the Church in the episcopal and early monastic schools. Not that the candid inquirer will necessarily suppose that the Church was the first or only institution which recognized the responsibility of handing on the torch of learning from one generation to another, or of spreading widecast the benefits of culture and instruction. The Holy Catholic Church had been founded on the model of the "Universal Empire," which the City of Rome had held before itself in its political vision. The military, social, political organism, which hoped to complete itself in universal dominion had, it is true, passed away. But, like the waves of the sea, as the currents of history moved onward into fresh regions the old ideals passed onwards, and moulded the new waters with the old forms of aspiration towards a universal empire, now to ecclesiastical, rather than political, ends. In attempting large and far-reaching ecclesiastical objects, it was not likely that educational ends, in some subsidiary degree, would be left out. For the institutions of Church and State, corporations as they are of the highest and most comprehensive forms, "never die," and for the continuance of the ideas for which they stood to future ages—nay to even the following generation—the culture and education of the young is too pressing and obvious a condition to escape the urgent attention of a State or religion of even a comparatively low type.

We should expect, therefore, that the care for the young in their up-bringing would not be overlooked by the builders of the old Roman Empire. Into this I cannot go further than to quote the words of Gibbon: "In all the cities of the Roman world the education of youth was entrusted to masters of grammar and rhetoric, who were elected by the magistrates, maintained at the public expense, and distinguished by many lucrative and honourable privileges." Without further inquiry on what would be an interesting question—viz., to what degree the organization in this direction was elaborated by the Romans—I only pause here to remark that the arrangements spoken of by Gibbon, however thorough, or however lacking, in their completeness, were clearly directed to the production of the citizen—probably, indeed, with that high ideal before them, as declared in detail to us by Quintilian, of the *bonus orator*.

With the words of Cardinal Newman still sounding in our ears, it is best to respectfully pass by in comparative silence the early centuries of the Christian era; for details of educational history are lacking, or, when found, are not indicative, for the most part, of the encouragement of secular learning. The Fourth Council of Carthage, for instance, disallowed the reading of secular books, even by the bishops. This was in 398 A.D.; and, although there were individual Churchmen who had more generous views as to literature, yet it would seem that learning and teaching came into prominence in the Christian Church with the foundation and development of the Benedictine Order of monks.

It was not, however, till the time of Charlemagne that education became organized as such. In 787 he addressed a letter to the abbots of the monasteries throughout his Empire. This proclamation has been called "the first general charter of education for the middle ages." In it abbots are exhorted to study "letters," to enable them to understand more clearly the contents of the Scriptures, and because, "although right doing be preferable to right speaking, yet must the knowledge of what is right precede right action." But the abbots are further expected to choose men for study who will not only be zealous and capable students, but also will be desirous of instructing others. These instructions were issued to bishops as well as to abbots. Theodulf, the Bishop of Orleans, was one who carried out the directions of the King. The spirit in which he did this is seen by the fact that he required all the clergy in his diocese to receive all children who should be sent by their parents to be taught in each parish, and that no fees were to be exacted. There is the principle of universal free

elementary education suggested. How far this was adopted in the other dioceses, or even in Theodulf's own, it is difficult to suggest. But the idea of universal education is there, and it is in the spirit of his great King, Charlemagne. I only add that Charlemagne established the great Palace Schools for the people about his Court, together with others of the laity from a distance, and that into these schools he brought the most distinguished scholars of the day, one of the greatest being obtained from England, viz., Alcuin, of the York School. . . .

After rapidly tracing the progress of the organization of education through several centuries, the lecturer quoted decretals from the Popes requiring bishops, or their officers, to license fit persons to teach, and ordering that no payment should be asked for such licences. Cases were quoted to show the qualifications required in applicants for the licence. Cases, further, were quoted to show that unlicensed teachers and schools were put down vigorously. The conclusion was that the evidence pointed to obtaining a licence as being the only mode of entrance to school teaching from the twelfth century onwards. Mr. Watson continued:—

Mr. Arthur F. Leach did an inestimable service to the history of education in showing with such a wealth of illustration the importance of the chantry schools in English education of the pre-Reformation times. "The great bulk of the chantries," he says, in England, "seem to have been founded in the fourteenth, fifteenth, and sixteenth centuries, and went on in increasing crowds with the spread of wealth, right up to the Reformation." Although the chantry priest was, in the first place, appointed to pray for the soul of an individual, his family, and friends, eventually other functions fell to his lot, one of the most common being that of teaching poor boys. As there were chantries in connexion with most, if not all, of the important churches of the country, that the teaching of children should be required of the chantry priest by the bequeather of a chantry was analogous to the institution by the Church of a prebend in the cathedral churches for the *scholasticus*.

Mr. Leach has nothing to say about licences to these chantry priests in his "English Schools at the Reformation—1546-48"; but, in his newly issued volume on "Early Yorkshire Schools,"\* he has given interesting cases in connexion with licensing of teachers in the chapter schools of York, Beverley, and Ripon.

In connexion with York, he tells us how, in 1367, Mr. Adam, of York, Precentor, complained that, "Whereas by immemorial custom the keeping school in the city of York for teaching boys singing ought to be held in a certain place belonging to the Cathedral Church, the appointment and removal of the rector or master of which was appurtenant to the Precentorship, yet divers chaplains, holy-water carriers, and many others, actually keep song school or schools in parish churches, houses, and other places in York, to the no small prejudice and grievance of the Precentor. . . ." All such masters, or keepers of schools, on the order of the Archbishop, were required to give them up within a fortnight on pain of ecclesiastical censure.

In 1375 one of the York schools had a master, John of York, who, on appeal to the Chancellor, had an unlicensed grammar-school master put down. The alternative was pain of excommunication. Mr. Leach refers to further cases of suppression of unlicensed teachers at St. Paul's, London, 1137, and at Winchester in 1180, at Canterbury, 1307-22; and states that similar rights were exercised by the Abbot of Walden, at Saffron Walden, in 1475.

The cases referred to by Mr. Leach at Beverley are given more circumstantially.

In 1304, on the motion of the rector of the school, Robert of Dalton, clerk, "who, unmindful of his salvation," had dared to teach school there, to the prejudice of the liberties of the Church, was directed by the Chapter to desist in nine days, or he would be solemnly excommunicated in Dalton Church. In the following year, Stephen of Gorton, clerk, received a similar warning for keeping an adulterine (i.e., unlicensed) school in Kelk. If he did not desist, he, too, was to be excommunicated, but, in his own school ("in scholis ipsius Stephani"). Mr. Leach's third case is at Beverley itself—an action against Geoffrey of Sancton, in 1305, for keeping an unlicensed school. He was warned to abstain from teaching, and actually fell under sentence of excommunication. "But, as with hardened mind, he despised the things of the Church, a hearing was refused him. They, therefore, asked the Official to avoid the said Geoffrey in the Consistory Court and other places whatsoever, and cause him to be avoided by others; that whilst he is shut out from common intercourse, being overwhelmed with shame, he may be more easily bent to the grace of humility and the result of reconciliation." This was effectual, for, in 1306, the Chapter directed Sir Alan of Humbleton to absolve Geoffrey of Sancton from excommunication.

The system of licensing teachers, I take it, thus remained in the hands of the Church till the time of the Reformation. As Mr. Leach has shown, the chief schools at that time were the chantry schools, and, with the dissolution of these, consequent upon the Chantry Acts

\* "Yorkshire Archaeological Society's Record Series," 1898. (1899.)

of 1546-48, in the reign of Edward VI., the system of licensing, it would seem, lost its *universality*. But it continued to exist, at least, as a *survival* from the old ecclesiastical system. As I shall show, it continued without a break to remain part of the Canon Law of the English Church.

In the reign of Mary, on the restoration of the Roman Church, there was, in 1555, an attempt to return to the practice of licensing. In the "Constitutiones Legatinarum R. Poli Cardinalis" the eleventh Decretum is in Latin: "Let no one, for the future, dare to undertake in any place the office of teaching, unless he has been examined by the Ordinary, and has been admonished as to the books which he ought to read. If it be otherwise, let him incur the pain of excommunication, and be prohibited from teaching for three years. And, amongst those who already perform the office of teaching, if any one should be found unworthy in faith, teaching, or morals, let him be ejected; but, if worthy, let him be confirmed."

Immediately after Elizabeth's accession, at the meeting of Convocation of the Province of Canterbury, it was proposed—but it does not seem clear whether it actually became an ordinance—"that no one should be admitted to teach youth, either in schools or private families, unless he has been approved by the Ordinary." This was embodied in the injunctions given by the Queen concerning the clergy and laity of this realm. And, again, in 1571, Convocation of Canterbury not only made this quite definite, but added: "That the bishop shall approve no schoolmaster as worthy of the office of teacher, unless, in his judgment, he has sufficient knowledge ["*nisi quam suo iudicio doctum invenerit*"], and unless he is recommended as worthy in life and morals by the testimony of pious men."

In Queen Elizabeth's reign there still need to be considered the notices of the Visitations of the Archbishop's province. In 1567 Archbishop Parker laid down in one of the Articles of Visitation the question: "Whether the officers and ministers, including the schoolmasters, within your church, *as without*, do either privily or openly preach or teach any unwholesome, erroneous, seditious doctrine." It is true that at the same time the inquiry is to be made: "Whether your schoolmasters be of a sincere religion, and be diligent in teaching and bringing up of youth." But it is quite clear that, with these visitations of Elizabeth's reign, the machinery of the Bishop with regard to the old ecclesiastical jurisdiction over schools is now being brought to bear for a political and religiously orthodox, rather than a pedagogical, purpose. The Privy Council, for instance, in 1581, ask Archbishop Grindall to have a good regard to the execution of the Act regarding recusant schoolmasters. Whereupon Grindall at once despatches the order for inquiry: "Whether any schoolmaster of suspected religion, or *that is not licensed to teach* by the Bishop or Ordinary, doth teach in any public or private place within this diocese." So, again, in 1583, Archbishop Whitgift directs the similar inquiry throughout his province, from all schoolmasters, "as well public as private, with order that such as be unsound may be removed, according to the statute in that behalf provided." In 1585, again, Whitgift is making inquiries in the diocese of Chichester, and in 1588 he enjoins the churchwardens and sworn men in the ordinary visitation of the diocese of Sarum to inquire "if any within your parish doth teach without licence of his Ordinary, under his seal." In 1604 the English Church Canons were adopted, and, I suppose, continue to be the Canon Law of this realm to-day. The Seventy-seventh Canon enjoins: "No man shall teach either in public school or private house, but such as shall be allowed by the Bishop of the Diocese, or Ordinary of the place, under his hand and seal, being found meet as well for his learning and dexterity in teaching as for sober and honest conversation, and also for right understanding of God's true religion; and also except he shall first subscribe to the first and third Articles"—i.e., "King's Supremacy" and "The Church of England as a true and Apostolical Church." (This Canon was supplemented, if not superseded, by the Act of Uniformity of 1662; and it was only the Act of 9 and 10 Victoria, c. 59, which repealed the section of the Act of Uniformity which imposed the sanction of punishment on those teaching without the licence. By 32 and 33 Victoria, c. 56, s. 20, the Endowed Schools Commissioners are to provide in every scheme for abolition of the necessity of having the Ordinary's licence.) The ecclesiastical jurisdiction of schoolmasters by the bishop was turned into an instrument for the punishment of heresy, rather than the promotion of education; though Bishop Gibson, in his "*Codex Juris Ecclesiastici Anglicani*," 1761, says that the licences to teach school appear without number on the records of particular sees, as also prohibitions. I may add to this the interesting fact that in the Commonwealth the power of licensing schoolmasters was exercised by the major-generals, and it is needless to add that good affection to the Council of State was a necessary condition of the licence. The ecclesiastical aspect has become political, and the pedagogical aspect over-shadowed. I have found a case in which the political side is all-prominent in Charles I.'s reign—in 1629. In that year Andrew Bird, head of the Free School at Reading, complains that the Chancellor of the diocese has granted a licence to one to teach grammar to the prejudice of the borough school. "It is," says the King's ordinance, "the King's pleasure that he cause that licence to be revoked."

To show how the question of licences could be made obnoxious to

Nonconformists, let us take the case of R. Claridge. Richard Claridge was a Quaker, who, in 1707, kept a successful school at Edmonton. Lord Coleraine and another parishioner took exception to the school on the ground that Claridge might proselytize children, and that, at any rate, the school was an eyesore to the vicar, his lecturer, and the master of the free school. Claridge was cited to appear personally at Doctors' Commons, charged with teaching boys and young men in the rudiments of the grammar and English tongue, and other school-learning, without licence in that behalf first had and obtained. This action dropped through; but, eight months afterwards, Lord Coleraine put up his footman, Edward Earl, to prosecute Claridge. Earl was a man who was no householder, nor had he any "visible estate"; but he was thought good enough for the purpose. The cause was tried at the Consistory of St. Paul's. Evidence was given tending to show that the prosecution arose from malice and ill will, and that Edward Earl was not acting of his own initiative, but at "the instance, request, and charges of Lord Coleraine." But the case proceeded, whereupon Claridge applied, through his counsel, to the Queen's Bench for a prohibition to stay proceedings in the ecclesiastical court. His counsel argued that teaching school is lawful for any person by the common law; that canons against the common law are void, and that Acts of Parliament and offences against them belong to the judgment of the temporal, and not to the ecclesiastical, courts. A prohibition was granted to stop proceedings till the next term, when the spiritual court might appear to show cause why a writ of prohibition should not be made out. The counsel on the other side did not appear, and the ecclesiastical court was tied up from any further prosecution.

Now how vexatious these proceedings were will be judged when it is pointed out that Claridge taught some of these children *gratis*; that he claimed "not to corrupt the youth, but to instruct them in the principles of truth and righteousness." But, to show conclusively that the legal action was based on difference of theological tenet, and not upon any question of educational fitness, it is enough to say that Claridge was an M.A. of the University of Oxford, where he had the reputation of being a good orator, philosopher, and Grecian. That he was a good teacher may be concluded from the size of his school, in which the boarders increased, and divers of the townspeople also sent their children to him. A clear statement of the bishops' views as to their ecclesiastical jurisdiction is to be found in a letter from Bishop Nicholson to Mr. Baron Price in 1705. He says: "Archbishop Arundel's Constitutions in Lyndwood's '*Provinciale*,' where it is stated that all manner of teachers (*quicumque docentes*, as well as *magistri*) are under the cognizance of the Canon as to licensing. 2. The gloss observes that the instructors of women and girls (which will hardly ever appear to have been the case of men in orders) are comprehended under that general title. 3. The private teachers (*in cameris et introitibus*) are then required to have licences from the Ordinary in form; and they that have them not, are to be proceeded against as sowers of schism."\*

This, however, is not the view held by the Crown Law Courts, as will be shown by the following case:—

In 1700, a schoolmaster called Cox was summoned before the Ecclesiastical Court at Exeter for teaching school without a licence from the bishop, and, on motion before the Lord Chancellor, an order was made that cause should be shown why a prohibition should not go. It was in the Court of Chancery moved to discharge the said order, alleging that before the Reformation this was certainly of ecclesiastical jurisdiction. Lord Keeper Wright gave judgment: "That both Courts may have a *concurrent* jurisdiction, and a crime may be punishable both in the one and the other. The Canons of a Convocation do not bind the laity without an Act of Parliament. But I always was, and still am, of opinion that keeping of school is, by the old laws of England, of *ecclesiastical* cognizance. Therefore, let the order for prohibition be discharged." But he held that, if it was for the teaching of any school except a grammar school, viz., writing schools, reading schools, and dancing schools, and suchlike, then the prohibition was to be granted.

As a practical illustration that, in the popular view, jurisdiction was accorded to the bishops' power of licensing, the case of the charity schools may be cited. These schools, established about 1700, by 1760 had reached the number of over 1,800. The number of scholars was about 42,500.† The great text-book for these schoolmasters was Dr. Talbot's "*Christian Schoolmaster*." It is there distinctly stated that to take the bishop's licence is required from every teacher; and it is added that any one teaching in any parish without a licence ought to be prosecuted by the churchwardens of the parish where he teacheth for the said offence.

My last instance of insistence on the necessity of obtaining the bishop's licence falls within the reign of our present Sovereign. In a book called "*Church-Clavering; or, the Schoolmaster*," by the Rev. W. Gresley, Prebendary of Lichfield,‡ we have a picture drawn as it

\* From a letter of Bishop Nicholson to Mr. Baron Price, 1705, in Sir H. Ellis's "*Letters of Eminent Literary Men*."

† "*Charity School Sermon*," by Dr. Worthington, 1768.

‡ Published in 1843.

presents itself to his mind of an ideal master of a National school. Joseph Primer just escapes becoming a Dissenting preacher and becomes instead a teacher of a National school. "I have often wished," he says, "that I had received a regular licence and commission from the bishop. I should feel more comfortable with such an authority, and do not live without the hope of receiving one some day." An interlocutor inquires: "Well, but you do not mean to say that in the present day you would prevent all persons from keeping schools unless they are licensed by the bishops?"

To which Primer replies that "those who belong to the Church should obey its rules. All Church of England schoolmasters, I conceive, would be bound to go to the bishop for a licence if he required it . . . let the bishops [continues Primer], if they think fit, revive the practice of licensing masters. Let such masters be subject to a strict examination as to their principles and qualifications, and let the Church-people send their children to masters who are so licensed. What is then more extraordinary in requiring that schoolmasters should be licensed than forbidding surgeons or lawyers to practise without authority? And is it not better to send our children to be educated by a master whose competency is guaranteed by authority than to commit them to the tender mercies of any ignorant person who may think fit to open a school?"

With Mr. Primer's last argument we all here should cordially agree. But, seeing that national education has to be organized, we wish our licensing or registration to be national also, and have it on a wide basis which may, or rather shall, include all teachers of every sect and denomination—men and women teachers, public and private teachers, University, secondary, and elementary teachers, on the common possession of the knowledge of the principles of, and skill in, the practice of teaching—without regard to either theological or political opinions held by the teacher. The National Church once was without the competition of dissenting bodies of theological thinkers. It included the nation. Now the nation includes all the churches. But the importance of education is still as great and is much more widely recognized as urgent. It behoves us therefore as a nation to assert the distinction between a qualified teacher and one not qualified with as keen an emphasis as was done by the old licence of the Church, though now on strictly professional lines.

Nor ought we to be ungrateful to the Church for the organization of the past. Modern developments have led to a differentiation of functions. The Church once provided the hospitals, almshouses, libraries, and provided our other national needs. Now voluntary secular bodies manage hospitals, Poor-laws provide for the poor, municipalities for libraries. So we now have School Boards—and we have rates levied on the people for the support of schools, instead of the old endowments of prebends and chantries for teachers. Necessarily, therefore, the differentiation of teachers from Church jurisdiction has followed that of other professions—as, for instance, doctors and lawyers. But the historical study of the old conditions strengthens the case for registration by an appeal to past experience of the ages; and, at least, one reflection will follow the study of the question of licensing, viz., that the full force of the old conviction of the need of personal piety and soundness of conversation and devotion to the teaching office, which belonged to the best ecclesiastical tradition of the teacher, should unconsciously be at work as the true and only lasting basis for a professional spirit in the future as it has been in the past; and for the rest—let us so far, in our national registration of teachers, learn from the old ecclesiastical system of licensing to follow what was good in it, and to avoid its errors and failings. So, finally, we see that registration is no new thing. It was found necessary in the middle ages, when education was, considering the difficulties, so wonderfully organized. And now that we, in this age, are beginning to organize education, we too, at last, have learned to recognize the need of licensing which was recognized and provided for so thoroughly in those ages.

Mr. THORNTON remarked that teachers used to think a great deal of registration, and he thought that the extent of the disagreement as to the way in which it should be brought about had greatly diminished. The more important question, however, was not the registration of the teacher, but the registration of the school. If that were secured, the registration of the teacher would come about indirectly.

The CHAIRMAN regretted that the lecturer had not found time to say something about the origin of the Universities. The reason of the selection of Oxford and Cambridge as the seats of learning was not clear, but it was evident that certain eminent teachers had gathered there, that their schools had gradually increased in numbers and importance; they acquired certain privileges, and became, in course of time, a close corporation; subsequently, all the different schools and colleges were constituted under one governing authority, and the supreme master was called the Chancellor, this word being presumably originally an ecclesiastical term. The mode of disputation which had been touched upon by the lecturer was extremely interesting, and it might be noted that this disputation gave rise to the term "Wrangler," now in use at Cambridge. In past times the clergy were the professors of all sciences. They were the leeches and the law-makers, and were concerned in the administration of the law. At a certain time the Pope

made a decree that ecclesiastics should not take part in legal cases as advocates; and, in order to avoid the consequences of this decree, the ecclesiastics put on wigs, which enabled the tonsure to be concealed. That was the origin of the wearing of wigs. He was glad to hear something about the licensing of girls' schools. It was well known that at the time of the Renaissance certain ladies—as, for instance, Lady Jane Grey—attained very great proficiency, even in the classics; but such exceptional cases were due to special circumstances, and the education of girls was generally very much neglected. It was interesting to note a remnant of old-time procedure in the power of conferring degrees still possessed by the Archbishop of Canterbury.

A vote of thanks to the Lecturer concluded the proceedings.

## MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held on February 10. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Barlet, Rev. J. O. Bevan, Mr. Bowen, Mr. Brown, Mr. Butler, Mr. Charles, Mr. Chettle, Mr. Eve, Rev. Dr. Hiron, Mr. Millar Inglis, Mr. Milne, Mr. Pinches, Mr. Rushbrooke, Rev. Dr. Scott, Mr. Sergeant, and Rev. J. E. Symms.

The minutes of the last meeting were read and confirmed.

The Diploma of Licentiate was granted to Mr. C. Clifford Lloyd, who had passed the required examination.

The Report of the Finance Committee was adopted.

The Report of the Examination Committee was adopted, and Mr. G. T. Moody, D.Sc., F.C.S., was appointed one of the Examiners in Chemistry.

The Moderators and Examiners for the year 1900 were appointed.

The Very Rev. the Dean of Wells was re-elected President of the Council, and Dr. Wormell, Sir Philip Magnus, and the Rev. J. Stewart were re-elected Vice-Presidents. Mr. H. W. Eve was re-elected Dean, and Mr. E. E. Pinches Treasurer of the College.

The following persons were elected members of the College:—

Miss E. A. Hargreaves, A.C.P., Hope House, Barton-on-Humber.

Miss A. B. Knight, Powerscourt, Boscombe, Bournemouth.

Miss A. Petter, A.C.P., Fairfield Road Higher-Grade School, Fishponds, Bristol.

The following books had been presented to the Library since the last meeting of the Council:—

By the BUREAU OF EDUCATION, WASHINGTON, U.S.A.—Report of the Commissioner of Education, 1897-98, Vol. I.

By E. ARNOLD.—King Alfred Readers, Books I.-VII.; Bell's German without Tears, Book I.; De Ségur's Histoire de la Princesse Rosette and La Petite Souris Grise.

By G. BELL & SONS.—Colson and Gwyther's Cæsar, Book III.; Headlam's Translation of the Supplements of Æschylus; Pencilbury's Short Course of Elementary Plane Trigonometry; Seccombe's Age of Johnson; Traves's Hannibal's First Campaign in Italy; Wainwright's Virgil's Æneid, Book II.; Warman's Virgil's Æneid, Book IV.; Wells' First Exercises in Latin Prose Composition.

By BLACKIE & SON, LTD.—Blackie's Merit Certificate Handbook of British History; Blackie's English Classics, Three Parts (Tennyson's Poems); Harrison's First Steps in Earth-Knowledge; Henderson and Parker's Introduction to Analytical Chemistry; Ninet's My First French Book; Proper's Sand's Les Ailes de Courage; Skeat's Specimens of English Prose.

By C. J. CLAY & SONS.—Cambridge Local Examination Papers, 1899; Edwards' Xenophon's Anabasis, Book V.; Eve's Racine's Athalia; Nicol's Cicero, Pro Lege Manilia; Reynolds' The Teaching of Geography in Switzerland and North Italy; Shuckburgh's Caesar's Gallic War, Book V.; Sidgwick's Virgil's Æneid, Book V.; Simpkin's Selections from Ovid's Tristia; Verity's Shakespeare's As You Like It; Verrall's Malot's Remi en Angleterre; Woodward's Expansion of the British Empire, 1500-1870.

By W. B. CLIVE.—Matriculation Directory, January, 1900; Fearenside's Matriculation History of England.

By MACMILLAN & CO., LTD.—Williams' Dryden's The Hind and the Panther. By SIR ISAAC PITMAN & SONS, LTD.—Pitman's Commercial Correspondence in English, Shorthand, French, and German.

By WHITTAKER & CO.—Cooper's Elementary Practical Chemistry; Coppock's Volumetric Analysis; Crump's Hoffman's Schiller's Jugendjahre. Calendar of the Royal Holloway College, Egham, 1899-1900. Calendar of the Pharmaceutical Society, 1900.

## COLLEGE OF PRECEPTORS CERTIFICATE AND JUNIOR FORMS EXAMINATION.

ERRATA IN CLASS LIST (CHRISTMAS, 1899).

### CERTIFICATE EXAMINATION.

#### SECOND CLASS (BOYS).

Insert in 1st Division: Ledger, A. V., Private tuition, and omit in Third Class, 1st Division.

Insert in 3rd Division: Washington, J. H., Balham S.

#### THIRD CLASS (BOYS).

Insert in 1st Division: Turpin, W. E., Nelson Coll., Blackheath.

Insert in 3rd Division: Yeomans, H., University S., Stroud Green.

#### SECOND CLASS (GIRLS).

Insert in 3rd Division: Tait, E. M., 61 Pevensey Road, St. Leonards, and omit in Third Class, 2nd Division.

#### THIRD CLASS (GIRLS).

Insert in 2nd Division: Hayes, F. J. A., h.7., Guildford Lodge S., Lee, S.E.

### JUNIOR FORMS EXAMINATION.

#### BOYS.

Insert: Lamdin, A., Castle Coll., Guildford. By Google

Newton, J., for Allenby Coll., Derby, read Whitworth S., Derby.

REVIEWS.

A MONUMENT OF ALFRED.

*Alfred in the Chronicles.* By Edward Conybeare, M.A.  
(Elliot Stock.)

We have here the best book which could have been written in advance of the millennium of the death of Alfred the Truth-teller—not, in the ordinary sense of the word, the most popular or easily readable, but still the most attractive and interesting for any grown-up and intelligent reader. It is, above all, an ideal book for a historical student, because Mr. Conybeare has set himself to give, in good plain English, all the notable early authorities for the life of King Alfred, extracted from the chronicles, and presented side by side, with due explanations and cross-references. The extracts number fourteen, and their sources are as follows, the original text being in Latin when not otherwise indicated:—Asser, “The Deeds of Alfred”; the Anglo-Saxon Chronicle, in Old English; the “Chronicles” of Eethelwerd; Simeon of Durham’s “Deeds of the English Kings”; William of Malmesbury’s “History of the Kings”; Henry of Huntingdon’s “Histories of the English”; Florence of Worcester’s “Chronicles”; Geoffry Gaimar’s “L’Estorie des Engles,” in Old French; Roger of Wendover’s “Flowers of Histories”; John of Wallingford’s “Chronicles of the English”; John of Brompton’s “Chronicle”; Ingulf’s (interpolated) “History of Crowland”; the Book of Hyde; and the Chronicle of St. Neot’s.

From these texts Mr. Conybeare has taken all that relates directly to Alfred, with so much more as serves to illustrate and characterize his time. To these hundred and fifty pages of authentic narrative we would send all who can read history, all who can lend themselves to the quiet and straightforward record of the Chronicles, not merely for their own entertainment, but as a training for the historical taste and instinct.

Prefixed to the documents which we have mentioned the reader will find an admirable “Introductory Sketch” of eighty pages, in which Mr. Conybeare has given us an adequate account of the Celtic and Teutonic mixture of races, laws, customs, characters, and ideals over which Alfred was born to exercise dominion, and which he did so much to combine and weld into a single nation. He shows us how our English conception of the life and work of the Anglian King has been built up on the early English histories, and he adds to the lifelike qualities of the picture by describing and quoting from Alfred’s written works, his laws, and the beautiful poem of “The Proverbs of Alfred,” of which we have only two manuscripts of uncertain date. It has never been translated; but Mr. Conybeare supplies a version, close in word and metre, of one-third or one-fourth of this legendary bequest of wisdom from “England’s darling.” We quote a few passages:—

Thus quoth Alfred,  
England’s joy:  
“Would ye, my folk,  
List now your Lord,  
Then should ye wit  
Of Wisdom’s way;  
How ye may this world’s  
Worship wield,  
And eke your soul  
To Christ may cleave.”

Wise were the words  
That Alfred spake:  
“Mildly I move you,  
Dear my friends,  
Poor and eke rich,  
People of mine,  
That all do fear  
Our Christ and Lord,  
Love Him and please Him  
Who Lord is of Life. . . .

“Behoveth the knight  
’Gainst foemen to fight,  
Lest they harry the land  
With fire-raising hand;  
That the Church have her  
peace,  
And the churl be at ease,  
His seeds for to sow,  
His meads for to mow,  
To the welfare of all.  
To the knight this I tell,  
Let him look to it well. . . .”

Thus quoth Alfred:  
“Hard is it to row  
’Gainst the tide in his flow;  
So is it to toil  
’Gainst the heart’s own tur-  
moil.

Yet he that in youth  
So to labour is fain,  
World’s wealth for to gain,  
That in eld he may rest;  
And eke ’mid his wealth,  
Aye worketh God’s will,  
His youth’s hard spell  
It hath sped him full well. . . .”

Thus quoth Alfred:  
“If thou in thine eld  
Art wasted in wealth,  
And no more canst lead thee  
With power nor with might,  
And no more hast strength  
For to steer thee aright;  
Then thank thy Lord  
Of all His love,  
And of all thine own life,  
And the light of the day  
And of all the mirth  
He maketh for man.  
And wheresou thou wendest,  
Say this at the end:  
‘Whate’er may befall me,  
God’s will be done.’”

Alfred has been commemorated as the “creator of the English Navy.” No doubt he utilized the sea-faring qualities which had always been displayed by the northern Teutons. Asser gives us an account of the famous fight in Swanage Bay.

Day by day the number of the miscreants [*perversi*] grew ever larger, so that, were thirty thousand slain in one day, others would take their place twice told. Then bade Alfred make barks [*cymbas*] throughout the realm, and keels [*gateas*], that is long ships, that he might meet the foes in sea-fight, as they came in. Therein embarked he adventurers [*piratos*] and let them keep the water-way [*vias maris*]. But himself hied he with all speed to Exeter, where the heathen were wintering, and shut them up in that city, and besieged them. On his seamen also laid he strait command that they should suffer no supplies to reach the foe by way of the Narrow Seas [*in parte freti*]. Then met there his seamen 120 ships, laden with armed warriors, coming to the help of their kinsfolk [*concivium*]. And when the King’s officers found ships thus filled with heathen war-men, then leapt they to arms, and boarded the savages like men. But the heathen, who now for nearly a month had been wave-tossed and ship-worn, vainly returned the onset. So that in a moment their line of battle was shattered [*lacerata*] and sunken in the place called Swan-wich; and they perished one and all.

Alfred’s long ships were bigger than the Norsemen’s “esks.” They were manned by sixty or more oarsmen, and were neither Frisian nor Danish in build; but “so as it seemed to the King they would best profit.” After Alfred the land had rest from the Vikings for a hundred years.

THE OXFORD CLASSICAL TEXTS.

“Scriptorum Classicorum Bibliotheca Oxoniensis.”—*Thucydidis Historiæ*, recognovit H. Stuart Jones (*Tomus Prior*); *Lucretii de Rerum Natura libri sex*, recognovit Cyrillus Bailey. (Clarendon Press.)

It is now many years since Jowett suggested that the Clarendon Press should issue a series of texts of the classical authors. The project was one into which the Master of Balliol entered very keenly, and long cherished; but the design was perforce abandoned because it was found impossible to obtain collations of the manuscripts in the Continental libraries. So engrossing are the duties generally assigned to the scholars who would be willing to undertake such work, and so entirely are we in England still wanting in those facilities with regard to leave of absence and funds for travelling students that exist in countries where the higher education is under State control, that the Englishmen who are able to range through the libraries of Europe at their leisure are exceedingly few in number.

Nor even now, it is clear, would it have been found possible to publish such a series as the present had it not been that during the last two decades an immense mass of manuscript work has been done by foreign scholars, and the text of many classical authors has thus at last been placed upon a satisfactory basis. Even now by no means all the greatest authors have been so generously dealt with. It is indeed only quite recently—long subsequent to the days of Bekker, subsequent even to the two Dindorfs—that the work of classifying manuscripts, deciding which are of importance for the text, and collating those down to the minutest details, has been thoroughly taken in hand. In many cases—as, for example, in that of Xenophon—a great quantity of manuscript work has still to be done.

It is somewhat unfortunate that, side by side with a laudable zeal to get at the manuscript readings, there has grown up on the Continent a desire to improve upon them, which we cannot help regarding as carried to great excess. What an English student desires to see before him in his text is the testimony of the best manuscript, the best class of manuscripts, or best manuscript reading available: always provided that obvious and certain corruptions are removed, so far as they can be removed. He feels quite a secondary interest in the ingenious improvements that are proposed by modern scholars at every line. Of course he does not despise the good emendation; but he cannot help feeling that so very few even of the most attractive emendations that can be offered, after obvious mistakes have been put right, are certainly what the author wrote, and he would sooner put up with an almost certain corruption than accept a wholly uncertain correction.

It seems to us that this is the view of the matter taken by the authorities of the Clarendon Press; that it is, at least for English students, the view that ought to be taken; and that consequently we have here in the first two volumes the beginnings of what promises to be a series of the utmost value to all lovers of the classics. Mr. Stuart Jones has, of course, availed himself largely

of Dr. Karl Hude's collations. Mr. Bailey depends mainly on the labours of Lachmann. But the former gives in his preface a lucid account of the best manuscripts of Thucydides and a very useful estimate of the importance of Messrs. Grenfell and Hunt's papyrus fragments. The critical apparatus—which, like the preface, is written in Latin—is cut down to the briefest possible dimensions consistent with thoroughness. Only those readings are noticed that have some real importance, either as showing an early divergence between different classes of manuscripts, or, at least, as Mr. Bailey says, as exhibiting common errors of the manuscripts. Mere blunders are excluded when the right thing is forthcoming in one or any other manuscript.

We have thus briefly indicated the general scope of the series. It may be of interest to our readers if we append the complete list of the authors so far arranged for, and the editors in charge of each:—Æschylus, A. Sidgwick; Apollonius Rhodius, R. C. Seaton; Aristophanes, W. M. Geldart, F. W. Hall; Cæsar, R. L. A. Du Pontet; Catullus, R. Ellis; Cicero, A. C. Clark, S. G. Owen, W. Y. Fausset; Cicero, Op. Rhet., A. S. Wilkins; Cicero, Op. Phil., J. S. Reid; Cicero, Epp., L. C. Purser; Demosthenes, S. H. Butcher; Euripides, G. G. Murray; Herodotus, G. C. Richards; Homer, D. B. Monro, T. W. Allen; Horatius, E. C. Wickham; Juvenalis et Persius, S. G. Owen; Lucretius, C. Bailey; Martialis, W. M. Lindsay; Ovidius, S. G. Owen; Pindarus, W. R. Hardie; Plato, J. Burnet; Plautus, W. M. Lindsay; Propertius, J. S. Phillimore; Sallustius, A. M. Cook; Sophocles, W. J. M. Starkie; Tacitus, H. Furneaux; Terentius, R. Y. Tyrrell; Thucydides, H. S. Jones; Tibullus, J. P. Postgate; Vergilius, F. A. Hirtzel; Xenophon, E. C. Marchant.

The paper, type, and binding are all that can be desired, and students and scholars alike will want to possess these books. True the price, if we mistake not, is rather higher than that asked for some of the texts issued by Continental firms; but the extra value is in the *format*; and, if the books are not remarkably cheap, they are as far as possible removed from being nasty. They will not fall to pieces; that merit alone is worth the difference. Many of the authors are to be issued in three forms, paper covers, limp cloth, and "on India paper"; but to the more severe authors, such as Thucydides, is denied the felicity of India paper. But the authors of antiquity were not troubled about such matters; and it is a far cry from Thucydides to India paper.

#### GEOGRAPHY AND WAR.

"Cambridge Geographical Series." Edited by F. H. H. Guille-mard, M.D.—*Outlines of Military Geography*. By T. Miller Maguire, LL.D. (Cambridge University Press.)

The newspapers afford a very good "post-graduate" course of geography. Nothing can teach a man the map of the world, the configuration of the land, the people, productions, and climate of particular countries half so well as the printed records of wars and expeditions. What would most of us know about the Cape Colony and Natal, the South African Republics and their borders, apart from the lessons of the past three or four months, or the corresponding lessons of an earlier date? The intelligent reader of letters and dispatches from the battlefields of a single generation should have a fair knowledge of the geography of many different portions of the world. This is not precisely what Dr. Maguire understands by "military geography"; though it is an approximation to it. Military and naval strategy is based in large measure on the knowledge of geographical detail.

Many of our international difficulties could never have arisen had the leaders of either political party been possessed of any sound knowledge of military or political geography. Our diplomacy has drifted into strange blunders, not so much through lack of skill as through lack of knowledge. Delagoa Bay, the key of South Africa, is a striking example; so are several districts on the borders of Canada. . . . A very rudimentary knowledge of the movements of armies from the valleys of the Euphrates and Oxus, and from the Khanates of Tartary towards India, from the days of the early Persians to those of Nadir Shah, would have prevented much wild talk on public platforms between the years 1876 and 1882.

No one will question that a student who is specializing for the Army or Navy at a college or University ought to make a salient feature of the study of geography, physical and political alike. "Every day," wrote General Sherman, one of the heroes of the American Civil War, "I feel more and more in need of an atlas, as the knowledge of geography in its minutest details is essential to a true military education." That was said by Sherman as a young man, twenty years in advance of the war. He devoted himself to geographical study, and it enabled him to render

invaluable services at Chattanooga, Atlanta, and Savannah. Instances are innumerable. The Boers have been able to hold the British in check for four months largely by their superior knowledge of the geographical detail of a country beyond their borders, whilst the Cape Colony and Natal had not carefully surveyed or mapped their own frontiers.

Dr. Maguire writes for students the geographical and strategical history of the chief wars of the century. He discusses the leading principles of strategy and military geography, the laws which govern the command of the sea, the significance of frontier features in military operations, the all-important question of fortification in its relations to geography, the selection of lines of march, and the influence of climate on military movements. Three chapters are devoted to the geography of European roads and defiles, and to the principal historic lines of invasion. The interest of the book is inexhaustible for one whose work and taste are concerned in military affairs. We turn to its pages at hazard for an illustration. There is an acute criticism of the fortifications of France since 1870. They are "stupendous," but "in many cases useless from a strategical point of view."

After the war Germany reduced the number of its small places to a considerable extent, while France increased its *forts d'arrêt*. In 1882 there were in France 147 places or independent forts, and 434 outworks and detached barriers. . . . The expense of construction and maintenance is a terrible drain on the resources of the State; but the waste of men in garrisons who ought to be with the armies in the field is a far more costly charge, and perchance a fatal injury to the State.

In 1880 the Commission of Defence laid it down that the various sections of the fortified frontiers and defensive positions would require garrisons to the aggregate of 518,194 men; and the number of places and forts has since been considerably increased.

If a nation will have forts and places, instead of placing them in a cordon along the frontier, a study of strategic geography would suggest that they should be placed *perpendicular* to the frontier, just as strategy suggests when possible a flank instead of a front attack. . . . The great danger of entrenched camps, as was fully evident in 1870, is that they prove a fatal attraction to field armies which pivot on them. After any check or temporary disaster the troops fall back into them, get shut up, and surrender. Thus Metz entrapped Bazaine, and even the small fortress of Sedan was injurious to MacMahon.

For soldiers, or for a boy who wants to be a soldier, this is a book of the utmost interest and utility.

#### THE NEW ORGANIZATION.

*Educational Reform: The Task of the Board of Education*. By Fabian Ware. (Methuen.)

This is a very complete review of the educational position as it is formed by the Board of Education Act. The first chapter traces the movement for the organisation of education from the Endowed Schools Act of 1869 to the recent Act of 1899. The second reviews the national resources for secondary education. The capital and talent invested in private schools are properly included. "The private day school has arisen either owing to the inability of endowed schools to meet the requirements of a locality, or in response to the demand of certain parents for an education which satisfies definite religious or social conditions. Those which meet this demand will continue to exist, and those that are efficient will contribute no little to the moral force and stamina of the nation." "Dependence on public favour is the key to the private school problem." There is something yet to be said for private schools which is not even hinted at here. When they are assured that they are fairly safe against destruction by State-supported competition they will attract much more capital than has hitherto been possible. The following is a case of fact:—A private schoolmaster had £3,000 to spend in building a school-house. Instead of taking for his model a modern public school, he chose a plan of building which could easily be altered into two private residences. Herein he was wise, for he knew that as affairs stand at present the greater his success the more likely would be the appearance of an endowed or State-aided competitor within a few yards of him, which would kill his school. This uncertainty of tenure accounts for the fact that there are few private schools held in buildings designed and built solely for the purposes of a school. The necessity for a census of schools and a criterion of efficiency is very fairly stated at the close of this chapter. The chapter on Technical Education insists emphatically on the folly of attempting to transplant any foreign system into this country, and the still greater folly of adopting a misrepresentation of a foreign system. It is probably true that the

average middle-class German is a better educated man than the average middle-class Englishman; but this is not due to technical or commercial institutes—it is due to the perfect organization of secondary education in Germany. This chapter forms a good introduction to those which follow it, and deal with the Board of Education Act and its expected developments, including the Consultative Committee, the general inspection of schools, the establishment of Local Authorities. We specially commend to our readers the last chapter on "The Nation's Opportunity," and in particular the description in this chapter of the kind of men who should be selected to help the Board to build up the national system.

#### HISTORICAL FRENCH.

*Outlines of French Historical Grammar.* By A. T. Baker. (Dent.)

It is, perhaps, unfortunate for this book that it appears so soon after the English translation of Darmesteter's. It is, however, on a different system—on German lines, in fact, rather than on French lines—so that there is room for both. The introductory matter is clearly arranged, and includes a tabulated list of dialectic peculiarities which is likely to be useful. Its value would have been still greater if the short *chrestomathie* at the end of the book had contained short annotated specimens of the several dialects. The account of popular Latin, so interesting a feature of Prof. Darmesteter's book, is perhaps too brief; and so is the notice of the changes which took place after the Old French period. The section on vowel and consonant changes, which occupies a considerable part of the book, is clear and full, and does not omit, as is sometimes done, the Germanic element of the language. Even more attention might have been given to that element, and the student's path enlivened by an occasional reference to the representatives in Modern German of the original words. One is inclined to ask, in this connexion, whether it would be possible to treat phonetic changes more briefly. There is some danger of "not seeing the wood for trees." In discussing the accident of verbs, Mr. Baker has wisely confined himself as much as possible, to a single form for each part of the verb in Old French, which is a distinct gain to the student. We cannot but regret that he has dispensed with paradigms, and that he has not seen his way to give us an alphabetical list of strong verbs in addition to the scientific classification. We miss, by the way, the perfects of *naître* and *rire*, both interesting forms. In dealing with the syntax the book is less satisfactory. The subjunctive, for example, is inadequately treated. But it is difficult for any one, especially if he is under the fascination of phonetics, to combine in one small book a reference grammar of Old French and a history of French syntax, as well as a study of the later changes, which have produced the vocabulary.

#### A WHIMSICAL STUDY.

*The Mind and Art of Poe's Poetry.* By John Phelps Fruit, Professor of English Language and Literature in William Jewell College, Mo. (H. R. Allenson.)

There may have been many good reasons why this book was written, but we cannot discover any for its publication. Prof. Fruit in his preface says: "I have kept, whimsically, to a study of Poe's poetry and known no other poet the while; I have, therefore, no opinions to venture on questions of comparative merit." Such a self-denying ordinance would not commend itself to the catholic soul of the poet; and a tea-taster's palate in time loses its power of appreciating the flavour of richest Pekoe. Prof. Fruit has made a mistake in indulging his whim, because he has thereby diminished his power of making us partake of his enthusiasm for the subject of his admiration. Even if light were needed for the due interpretation of Poe's poetry, nothing could be more useful for this purpose than a short account of the literary atmosphere and influences which surrounded him. Whence came the poet's fine sense of tone and cadence? Was it the influence of the classical poets which

brought me home  
To the glory that was Greece  
And the grandeur that was Rome,

or of Coleridge and Keats? Such questions, however, are outside the sphere of our author's critical activity; and, instead, we are given page upon page of paraphrase in which he drives home the obvious with most unkind iteration. We think that, in spite of the pains taken to make his paraphrases read melodiously, Prof. Fruit belies his own advice "that to get the

right good of the poet is to plunge soul-forward into his works." After a plunge he sometimes rises with an ecstatic fervour redolent of a young literary professor's lecture-room, and speaks thus:—

The maiden's name, "Ligeia," begins with the liquid of liquids:  
"Ligeia! Ligeia!  
My beautiful one!"

Repeat "Ligeia" with the rising inflexion; then pause a moment for the liquid tones of the name to flow into and through your soul. After that how aptly does "My beautiful one!" flow from the lips!

There is similar appreciative comment on "The Raven" and "The Bells." Prof. Fruit has brought much enthusiasm and industry to bear upon his task, and, in no unkind spirit, we would recommend him to let his literary tastes "come out East."

## GENERAL NOTICES.

### CLASSICS.

*Vergil: Georgics, Book IV.*, edited by John Sargeant (Blackwood), is a volume in "Blackwoods' Classical Texts"—the first of the series that has come under our notice. We have recently referred in this column to two new illustrated series—those of Messrs. Bell & Sons and Messrs. Blackie. Now Messrs. Blackwood come forward with yet a third. Some of the illustrations are coloured, and the reproduction is admirable. The books are intended for more advanced students than those of Messrs. Bell, and, consequently, are without vocabulary. The editing of the specimen before us is thoroughly competent; the notes are brief and interesting, and the introduction and appendices are of more than average merit. Mr. Sargeant's remarks on the flowers of Vergil are specially pleasing. He rightly says that the *narcissus* of line 123 is "probably the *Sternbergia lutea*," but might have added that this is none other than the autumn daffodil of our gardens—figured, for example, in Robinson. The price of the book is remarkably low.

*First Exercises in Latin Prose Composition*, by E. A. Wells (Bell & Sons), is another remarkably cheap book issued by a firm that is pouring out a great number of superior elementary books. A series of vocabularies is followed by exercises on the rules of Latin grammar, the rule, in every case, being very briefly stated at the head of the exercises. This book requires no grammar or dictionary. We have noticed that the syllables are not in all cases correctly marked. The system of marking *longs* only is to be commended.

*Ovid: Metamorphoses I.*, lines 1-150, by A. H. Allcroft and B. J. Hayes (Clive), is a volume of the useful Matriculation series issued with a view to a forthcoming examination. The reason for slicing up the book is, no doubt, cogent; but, as the same price will buy a complete edition, with pictures, it is scarcely likely that this work will be adopted in our schools.

"The Cambridge Series for Schools and Training Colleges."—(1) *Ovid, Selections from the Tristia*. By H. F. Morland Simpson. (2) *Cæsar, De Bello Gallico V.* By E. S. Shuckburgh. (3) *Vergil, Æneid V.* By A. Sidgwick. (4) *Xenophon, Anabasis V.* By G. M. Edwards. (Cambridge University Press.)

Some months ago, in noticing a volume of Mr. Sidgwick's well known "Vergil," which is included in the above series, we took occasion to express our ignorance as to what special features are supposed to fit the series for "Training Colleges." We have an idea that the system of teaching Latin in those colleges differs in many respects from the system in vogue hitherto; and we believe that those responsible for the work in training colleges base their work on the teaching of the celebrated German theorists. Take up Gullett's "Latin Reader." Have you any doubt as to what features are supposed to render it specially fit for the use of those who follow the great theorists? Now we have opportunity of examining four of the "Training College" volumes together; and we have no hesitation in returning the answer to the question we propounded. A book for training colleges has a vocabulary. That is all; in other respects it differs not at all from the ordinary "Pitt Press" book. It is proper, however, to say that Mr. Morland Simpson has proceeded on a definite plan. He has excluded translation almost entirely, and has left it for the teacher to supply "the model of elegant translation" when the pupil "has done his best." As the book is intended for those who are making a first acquaintance with Latin poetry, we think this plan is rather severe on the pupil. It is easy to give too much help in translation; to give none seems to us equally wrong in theory. With another part of the editor's plan, however, we cordially agree. He has avoided as far as may be references to dictionaries, grammars, and parallel passages. The selection is designed to illustrate the life of the poet; and therefore, some of the most beautiful of the "Tristia" are necessarily omitted.

Mr. Edwards's "Xenophon" supplies a marked contrast to Mr. Simpson's book; and we cannot imagine how it is suitable for the same series. It has a very long introduction, printed in long sections

and small type, with a most forbidding look about it; and among the notes are many quotations and bits of learning that will be entirely useless to the young student. Mr. Shuckburgh's volume of "Caesar" is supplied with a map of the Gallic campaigns that will, at least, startle the principals of training colleges, for its aggressive hideousness has seldom been surpassed, even in an English school book. It is to be understood that we offer no adverse criticism of these two books, as ordinary school books; they are neither better nor worse than hundreds of others produced by men who are out of touch with the teaching of low forms, and forget what a beginner's requirements are. But we wish to emphasize our protest against the title of the series.

"Bell's Illustrated Classics."—(1) *Vergil, Æneid II.* By L. D. Wainwright. (2) *Vergil, Æneid IV.* By A. S. Warman.

Mr. Warman's notes occupy twenty-five pages; Mr. Wainwright's, eighty. Probably the ideal lies somewhere between the two extremes. Certainly Mr. Warman's comments seem to us too slight in parts; but, on the whole, his volume is well suited to its purpose, and is the work of a man who understands the needs of beginners. Mr. Wainwright's edition is quite elaborate enough for middle, or even upper, forms, as the following specimen will show. Commenting on the words *integer viri*, Mr. Wainwright remarks that "Rohy considers it [the genitive] closely connected with the locative use of *animi*, with such adjectives as *eger, ancicus, fidens, maturus, victus*, &c. Except with *animi*, the construction is only found in the poets, and later writers such as Tacitus." He shows a wide acquaintance with the work of other commentators, including Henry, and with verse translations. Altogether, this is a scholarly edition. Both books have good introductions and grammatical summaries; only it is to be understood that everything in Mr. Wainwright's volume is on a more liberal scale. The illustrations, all taken from authentic sources, form a great attraction.

*Tales of Ancient Thessaly*, by J. W. E. Pearce (Blackwood), is a new departure in elementary reading books, and, like the two volumes just noticed, is welcome as the work of an editor who understands the difficulties of beginners. Two or three pages at the beginning of the book, in which Mr. Pearce deals very intelligently with these difficulties, would form a valuable lesson to many of the editors whose work comes under our notice. The text of the book is adapted—with the requisite Bowdlerization and de-Madaurization—from the fourth book of Apuleius' "Metamorphoses." The central portion is occupied with the story of Cupid and Psyche; but we have also the robbers' cave and the transformation of Lucius. There are some exercises for re-translation, a very good index on grammar, to which references are given in the notes, and, of course, there is a vocabulary. About the notes there is an unconventionality that makes them refreshing to the reviewer who looks through so much that he knows is absolutely useless to schoolboys. "If you can't read Latin pretty easily and connectedly," says Mr. Pearce, in a somewhat lengthy, but very comforting, aside, "take this as a general rule for picking your way through a complex sentence." There is something which the poor pupil will think worth having. We think that those teachers who are tired of "cooked 'Livy'" might profitably give Mr. Pearce's "Tales" a trial. What joy it would have been to learn to read Latin in such books as Messrs. Bell and Messrs. Blackwood are now issuing!

*Homer, Odyssey XI.*, edited by J. A. Nairn (Pitt Press), is an admirable book for use with upper forms and for University students. There is much learning here in a narrow compass. The introduction gives an account of the Homeric Underworld that will be valuable even to advanced scholars. An outline of Homeric grammar follows, and several special points connected with grammar and prosody are dealt with in a series of appendices. We should have liked to see a comparison of Homer's Hell with Vergil's and Dante's. The book may be unreservedly commended as a first-rate edition.

The latest volume we have received from Messrs. Clive is a half-crown *Prometheus Vincetus*, edited by F. G. Plaistowe and T. R. Mills. The introduction contains the leading facts about the Greek drama and the theatre. The circumlocution by which the editors avoid saying whether there was a stage or not in the theatre of the fifth century is a piece of ingenious but rather low cunning, if we may say so without intending any offence. "Beyond the orchestra, and facing the audience, was the area on which the actors performed." We should like to tackle a few of the numerous examination candidates who will use this volume after they have read the introduction, and ask them whether there was a stage or not. The description of metres is rightly limited to the *senarius* and the anapestic measure. The notes are all that the candidate can require.

*Cicero pro Lege Manilia.* Edited by J. C. Nicol. (Pitt Press.)

The introductory matter includes a clear account of the long conflict with Mithridates, and a good analysis of the speech. The notes are adequate, but do not give too much help; in fact, the editor protests in his preface against the tendency to make things too easy for boys and save them the trouble of thinking. In two directions his notes are particularly valuable—the varied meanings of words like *ratio, res*, &c., are carefully collected, and short quotations to illustrate the meanings of words are freely introduced. Nothing is better calculated to fix the meaning of *contentio* or *difficilis*, for example, on a boy's

mind than to quote, as Mr. Nicol has done, *contentio quaedam et comparatio, nec difficiles nec inhumani senes*. It prepares him, too, to use a large lexicon with advantage. Nizolius ought to lie on the table of every sixth-form class-room. The index is conveniently arranged for the comparative study of constructions.

*Caesar's Gallic War, Book I.* Edited by J. W. Bartram. (Longmans.)

This edition is to be recommended for its large clear print and excellent illustrations, showing pretty well everything that is known about the Roman soldier. The maps, too, are very good. The introduction includes a life of Caesar and an account of his army, giving the impression that it is intended to reappear in succeeding volumes of the series. A short special introduction to the first book would be a useful addition. The vocabulary is carefully drawn up, the meanings of words being well classified. The notes are full and helpful. Attention is often called to quite ordinary constructions; but perhaps that is not amiss for beginners. Occasionally, but not often, a free translation is given without showing how it is led up to.

#### MODERN LANGUAGES.

*Racine: Athalie.* Edited by H. W. Eve, M.A. (Cambridge University Press.)

The excellent editions of French classical plays edited by Dr. Brauholtz for the "Pitt Press Series" are well known to English teachers, and have justly attracted attention even on the Continent. We welcome Mr. Eve's edition of Racine's masterpiece as a worthy companion to these volumes. The first part of the introduction deals with the history of French tragedy and Racine's place in it; and with the consideration of "Athalie" as a drama. In the space of some fifteen pages, Mr. Eve succeeds in giving a clear and accurate account of what is absolutely essential for the proper appreciation of the play. The second part of the introduction consists of "Notes on the French Alexandrine." It cannot be too strongly recommended that pupils should receive a knowledge of French prosody as soon as they proceed to read poetry in that language. Mr. Eve's Notes are clear and helpful; but is it well to use the terms *anapest, piron, choriamb*, &c., in dealing with French, where quantity plays practically no part? The English term "overflow" is preferable to *enjambement* (page 36). The text is printed with that scrupulous care which we expect from the Cambridge Press; and the notes are excellent alike in substance and in expression.

*Malot: Remi en Angleterre.* (A Selection from *Sans Famille.*) Edited by Margaret de G. Verrall. (Cambridge University Press.)

There can be no doubt that the well merited success of "Remi et ses Amis," by the same editor, has led to the publication of this further selection from Malot's novel. The notes and vocabulary have been prepared with the same care, and the book can, therefore, be recommended as warmly as its predecessor. We have only one suggestion for the next edition—the "classification of the uses of the French subjunctive in this book" would be far more helpful if the sentences were quoted in full, or, at any rate, in such a form as to give a meaning. It is a wearisome process to refer to the text for every quotation, and very few students will have the patience to do so.

*Madame de Ségur: Histoire de la Princesse Rosette and La Petite Souris Grise.* Edited by B. Daly Cocking. (Edward Arnold.)

Two short fairy tales, which show the usual strong and weak points of the French fairy tale. The first contains more than reminiscences of Cinderella. The faultless princess happily weds an equally faultless prince, who appears to be taken quite as much by her extremely refined manners as by the apparently boundless resources of her wardrobe. Some half-dozen costumes are described in detail. The other tale is intended to show the dangers of being inquisitive. In spite of the enmity of the fairy Détestable, the heroine Rosalie is eventually betrothed to Prince Gracieux. There is a faint, old-fashioned smell of musk about these tales which makes us sure that a healthy English boy will not read them with pleasure; and we doubt whether an English girl will be satisfied with such fare. The notes have been written with evident conscientiousness, and the vocabulary is practically complete as far as we have tested it. Such slips as are to be found in the printing are too trivial to enumerate.

*Cassell's Lessons in French.* By L. Fasquelle, Prof. De Lolme, and Prof. E. Rouband. New Edition, revised by J. Boielle. (Cassell.)

The First Part (145th thousand) and the Second Part (95th thousand) are issued in a single volume. The whole book has been reset in clear type, and each lesson, with the exercises bearing on it, has been brought within the compass of an hour's work. This book is too well known to need a detailed description. It is to be regretted that the examples of the grammar rules are not taken from modern French. The practice of using seventeenth-century passages for this purpose is, indeed, common, but still to be deprecated; it tends to obscure the very marked changes which the language has undergone in the last two centuries. Mr. Boielle has done his work with commendable thoroughness; and the book will be found useful for purposes of reference, even by teachers who do not care to introduce it into their classes.

*Select Passages from Modern French Authors (Senior and Junior Course).*  
Compiled by L. E. Kastner.

These selections are taken from authors of the seventeenth century, from Chateaubriand and Lamartine down to Heredia, Zola, and Loti. They are primarily intended to supply candidates for higher examinations with specimens of authors from whom passages are likely to be taken; but they are well enough chosen to make them an interesting anthology for general readers. To such readers, and probably to most teachers, a few notes on unfamiliar phrases and allusions would be very welcome. But few Englishmen could identify all the proper names or interpret all the numberless technical words that find their way into modern French poetry. The notices of authors prefixed to each group of extracts are often open to the reproach: "Brevis esse laboro; obscurus fio." They do not take sufficient account of the limited knowledge of the average student or sixth-form boy, to whom a phrase like "A link between the self-confession of the Romanticists and the impassibility of the Parnassians," or "There is no doubt that a good deal of his satanism is pure charlatanism," is not easily intelligible. What such students want is short estimates of authors expressed in ordinary language, and based on the extracts selected—such estimates as Mr. Kastner very likely gives in his own lectures.

*A First German Writer.* By A. A. Somerville and L. S. R. Byrne.  
(Rivingtons.)

This is not altogether a new book, but is made up from the grammar and exercises by the same authors, with certain alterations and additions. The exercises consist of short sentences of the ordinary type, interspersed with a good many continuous stories and other pieces adapted to the stage which the pupils have reached. Even Mr. Punch's "Not a fair exchange," enumerating the foreign articles to be found in an English house, has been ingeniously brought in. There is a good deal to be said for the arrangement; the verbs, including even the passive voice, come first, then the declension of adjectives, and then the declension of nouns. The order of dependent sentences comes comparatively late, so that the continuous pieces in the first half of the book are made up entirely of simple sentences. The book is practical, and evidently the result of considerable experience in teaching.

*German without Tears.* By A. H. Hutchinson. (E. Arnold.)

This is adapted from Mrs. Hugh Bell's "French without Tears." It is a collection of childish stories, with pictures, readily lending themselves to conversational exercises. The vocabulary is strictly limited, and very few idioms are introduced. It should prove a useful help for those who begin German in the nursery; it is much to be wished that more children did so; the difficulties of elementary German are less than must be encountered in the early stages of French. The book is printed in English type.

*A Compendious German Reader.* Compiled by G. B. Beak. (Blackwood.)

This book is intended for Army classes, and will be found useful either as a reader or for "unseens." It contains a number of extracts from modern historians, illustrating the history of Germany from 1640 to 1888. Many of them, but by no means all, are descriptions of battles. We have, for example, notices of Stein and his reforms, of Joseph II. and of Bismarck on Social Democracy. An appendix, to which reference is constantly made, contains a history of Germany during the same period, written in clear and readable English. The historical extracts are supplemented by a few literary ones, including passages not only from the classics, but from quite modern writers, as Paul Heyse, Spielhagen, Sudermann, and Gerhart Hauptmann. These are accompanied by short notices of the authors. The idea of the book is a good one, and it is well carried out.

*Schillers Jugendjahre, eine Erzählung.* By F. Hoffmann. Edited by F. Hamby. (Whittaker.)

Neither the vocabulary nor the notes of this edition are satisfactory; there are omissions in the vocabulary, and the notes are neither scholarly nor suggestive. Nor, indeed, are they always correct—for example, to "Kein Opfer schien ihm zu gross, das er ihnen nicht mit Freude hätte darbringen mögen" we have "the auxiliaries should follow the finite verb, but when there are two only one is inverted: 'No sacrifice to him so great that he would not willingly consent to it.'" The explanation is, at least, wanting in clearness; a single word cannot be inverted; while the translation is neither literal nor a free rendering into English; the past tense is ignored, and *darbringen* (one of the many words that do not appear in the vocabulary) is mis-translated.

#### MISCELLANEOUS.

*The Scientific Study of Scenery.* By John E. Marr, M.A., F.R.S.  
(Methuen.)

This pleasant book, with its twenty-one capital illustrations and many diagrams, is concerned with a distinctive subject, to which Mr. Marr gives the name of Geomorphology, "sprung from the union of geology and geography." It discusses the origin of scenery in the contour of the earth's surface, where it has been subjected to volcanic and other elemental agencies; and we owe the book as it stands to the conjunction in one person of the physiographer and the artist. It is a

volume which will be very welcome to the general reader, especially readers who have acquired a love of scenery by travelling; and it has a special value for students of geology and physiography.

*Historical Tales from Shakespeare.* By A. T. Quiller-Couch.  
(Edward Arnold.)

Mr. Quiller-Couch has naturally confined himself to the plays which were not used by Charles and Mary Lamb for their "Tales from Shakespeare." We have, therefore, little of the romantic interest which was the main attraction of the earlier volume, but, in its place, a somewhat stiff and archaic paraphrase of the dialogue and action of "Coriolanus," "Julius Caesar," "King John," "King Richard the Second," "King Henry the Fourth," "Fifth," and "Sixth," and "King Richard the Third." Of these eight plays we have the substance of the plots in narrative form, told by a competent hand. It is no longer Shakespeare, but the book may serve a useful purpose in more ways than one.

*A Short Story of English Literature.* By E. S. Mellows. (Methuen.)

Miss Mellows has added one to the long list of stories and histories of our national literature, and, if she does not increase the sum of knowledge, she unquestionably makes a pleasant contribution to the variety of our English handbooks. She recounts the progress of literary thought and production in England, with titles, subjects, occasional brief extracts, biographies of authors, and summaries from time to time of the historical conditions and characteristics of successive periods. The book is suitable for reading by boys and girls as a general introduction to literary annals; though even for this limited purpose it might have been possible to secure a little more precise exactitude. A touch of revision would have improved such phrases or sentences as these: "The earliest inhabitants of these islands . . . were the Ancient Britons"; "by the third century a form of writing was in use"; "Utopia, which means nowhere." On the whole, however, Miss Mellows is accurate and very readable.

*First Steps in Earth Knowledge: being an Introduction to Physiography.*  
By J. Ansted Harrison, B.Sc., and W. Jerome Harrison, F.G.S.  
(Blackie.)

The subject commonly called "Physiography" is defined by the authors as "the application of all the sciences to the study of the great globe which we inhabit." This text-book is an introduction well written, illustrated, and printed. It consists of three sections forming elementary introductions to the sciences of mechanics, physics, and chemistry.

*Plane Trigonometry for Colleges and Schools.* By Daniel A. Murray,  
B.A., Ph.D. (Longmans.)

Although there are already so many good text-books on this subject, yet this book has a *raison d'être* on account of the clear and intelligent explanations of principles, which maintain a logical consecutiveness throughout the work. The exercises are good and well graduated.

(1) *Institutes of Education, comprising an Introduction to Rational Psychology.* Second Edition. (2) *Lectures on Linguistic Method in the School.* Third Edition. By Prof. S. S. Laurie. (Edinburgh: Oliver & Boyd.)

These are revised and extended editions of two of Prof. Laurie's well known and very helpful volumes. There is much new matter in the "Institutes"; though the book remains essentially the same as when it first appeared. To the volume of "Lectures" is added an out-of-print essay on "Language versus Science" as a basis of school instruction.

*The Swan Shakespeare.* With Introductions, Notes, and Illustrations.  
(Longmans.)

The "Swan Shakespeare" is a new edition of the plays, with a separate volume for each play, and with many useful and attractive features. The edition is intended for the use of schools, and the apparatus is ample for the guidance and assistance of young students. Each volume begins with an illustrated life of Shakespeare, and in each there are ten full-page pictures. The editors of the several plays have worked studiously on a common plan, and we imagine that the series will commend itself to most of those who make its acquaintance. The plays already published are "Julius Caesar," "The Merchant of Venice," "King John," "The Tempest," "As You Like It," "Henry V.," "Richard II.," and "Macbeth."

*Macaulay's Frederic the Great.* Edited by A. T. Flux. (Macmillan.)

This edition of one of the most brilliant of Macaulay's Essays will be found useful by the general reader as well as by the student. The innumerable historical and literary allusions in Macaulay's "picture-prose" must, one would think, prove a stumbling-block to most people—to the Australian miner, for instance, or the American backwoodsman, in whose huts, it is said, the "Essays" are frequently to be found. Mr. Flux has performed his difficult task with considerable skill. His notes are plentiful, but brief and to the point. There is a map of Europe at the time of the Seven Years' War, and a sketch of Macaulay's life. In the latter we are frequently told the sums of money made by Macaulay: the author had possibly the desire to give the world in general the advice that Macaulay gave his nephew, that, "if he minded his syntax, he might eventually hope to reach a position which would give him £300 a year, a stable for his horse, six dozen of audit ale

every Christmas, a loaf and two pats of butter every morning, and a good dinner for nothing, with as many almonds and raisins as he could eat at dessert."

"University Tutorial Series."—*The Matriculation History of England.*  
By C. S. Fearenside, M.A. (Clive.)

This concise and carefully considered book is designed in the first place to meet the requirements of the London Matriculation syllabus, which is not likely to change its general character under the new order of things. It is a history of England to the end of the seventeenth century, with the geography relating thereto. Mr. Fearenside has done his best to observe due proportions in dealing with different periods, he has arranged his text in the manner most likely to assist a student who makes good use of his memory, and he has made "ample provision for problem work"—which apparently means that he has suggested topics and questions for treatment. The plan of the book is practical and helpful.

*General Intelligence Papers, with Exercises in English Composition.*  
By Gerald Blunt, M.A. (A. M. Holden.)

An excellent book of papers for practice in the reproduction of miscellaneous knowledge. The easier questions can be answered by a boy or a girl with intelligent parents who talk freely at meals; the more difficult ones by boys and girls who read and remember things; others, again, only by studious boys and girls from fourteen upwards. It is a book of which much use may be made.

*Europe: Its Physical and Political Geography.* By M. J. C. Meiklejohn. (A. M. Holden.)

A good introductory text-book of physiography, with chapters on latitude and longitude, day and night, and the seasons. This is undoubtedly a very serviceable little book, full of matter, but not overloaded. The information is clearly and simply set forth, and there are two capital maps of Europe, physical and political. From the same publisher we have a third edition of Mr. Meiklejohn's *British Colonies and Dependencies*.

Of texts with notes or glossaries we have *The Faerie Queene, Book VI.*, edited from the original editions by Kate M. Warren (Constable & Co.); *The Hind and the Panther*, with introduction and notes, by W. H. Williams, M.A. (Macmillan)—a very good school edition; *L'Allegro, Il Penseroso, Comus, and Lycidas*, with introduction and notes, by T. F. Huntington (Harvard: Ginn & Co.); *Macaulay's Essay on Horace Walpole*, with introduction and notes, by John Downie, M.A. (Blackie & Son); and from the same publishers, in "Blackie's English Classics," *Murmion, Canto III.*, and *Robert Browning, Select Poems*.

Amongst our reprints this month we have Charles Darwin's *Journal of Researches into the Natural History and Geology of the Countries visited during the Voyage of H.M.S. "Beagle" round the World.* (Ward, Lock, & Co.) This is a volume of the "Minerva Library." It is well printed, with the original illustrations, and is prefaced by a short biography. From the same publishers we have *Holmby House: a Tale of Old Northamptonshire*, by G. J. Whyte-Melville.

WE HAVE ALSO RECEIVED the following publications and new editions:—

*The Royal Holloway College Calendar, 1899-1900* (Spottiswoode).  
*The London Matriculation Directory, No. XXVII.* (Burlington House, Cambridge).

*Mentally-Deficient Children: Their Treatment and Training*, by G. E. Shuttleworth, B.A., M.D. (H. K. Lewis)—a second edition of this well known and useful work.

*The Newton Object-Lesson Handbook, Part III.* (Blackie).

*Combined Readers in Elementary Science and Geography*, by Vincent T. Murché, F.R.G.S., Book II. (Macmillan).

*Algebra for Elementary Schools, Part I.*, by H. S. Hall, M.A., and R. J. Wood, B.A. (Macmillan)—a serviceable introduction on easy lines. "Arnold's Geographical Handbooks."—VII., *Africa*; VIII., *United States of America*; IX., *Central and South America*; X., *The World in Outline* (Edward Arnold).

*Chambers's New Recitations for Schools*, selected by R. C. H. Morrison and W. Woodburn, Books I.-V. (Chambers).

*The Arcadian Reciter, Book III.*, selected by Margaret W. Rudd (Cox & Co.).

*A Primer of Mental Science*, by the Rev. John H. MacMahon, A.M., LL.D. (Simpkin, Marshall).

*The National Vocalist*, edited by Alexander Anderson (Curwen & Sons).

N.B.—The small italic letters denote that the candidate to whose name they are attached was distinguished in the following subjects respectively:—

*a* = Arithmetic, *g* = Geography,  
*al* = Algebra, *h* = History,  
*d* = Drawing, *l* = Latin,  
*e* = English, *ph* = Physiology,  
*eu* = Euclid, *s* = Scripture,  
*f* = French. *sp* = Spanish.

The small figures <sup>1</sup> and <sup>2</sup> prefixed to names in the Second and Third Class Lists denote that the candidates were entered for the First and Second Classes respectively.

MATHEMATICS.

To prove that, in any triangle, the perpendiculars from the vertices upon the opposite sides are concurrent. By J. W. SHARPE, M.A., late Senior Fellow of Gonville and Caius College, Cambridge.

In the triangle ABC, draw BE, CF perpendicular to CA, AB, respectively, intersecting each other at O. Join AO. Bisect AO, BC at G, H, respectively; and join EG, GF, FH, HE.

Then, since the angles AEO, AFO are right angles, and G is the middle point of AO, therefore GE, GA, GF, GO are all equal.

Similarly, HB, HF, HE, HO are all equal. Therefore  $\angle HFB = B$ ,  $\angle HEC = C$ ,  $\angle AFG = \angle FAG$ ,

and  $\angle EGF = 2A$ ; also  $\angle GEH = \angle GFH$ .

Now  $\angle HFB + \angle HEC = \angle EHF + A$ ; therefore  $\angle EHF + 2A = B + C + A = 2$  right angles;

therefore  $\angle EHF + \angle EGF = 2$  right angles;

therefore the equal angles GFH and GEH are each a right angle;

therefore  $\angle AFG + \angle BFH =$  a right angle;

therefore  $\angle OAB + B =$  a right angle;

therefore AO produced is the perpendicular from A upon BC.

Note 1.—If P be the middle point of GH, it follows, since HEG, HFG are right angles, that PE, PG, PF, PH are all equal. This establishes the fundamental property of the nine-point circle, and gives a construction for its centre P and diameter GH.

Note 2.—The above proofs depend only upon the first book of EUCLID.

14193. (Professor G. B. MATHEWS, F.R.S.)—Given the general equation of a conic referred to rectangular axes, find the locus of  $(\xi, \eta)$ , first, when  $x - \xi = 0$ ,  $y - \eta = 0$  are conjugate with respect to the conic; and, secondly, when  $x + y - \xi - \eta = 0$ ,  $x - y - \xi + \eta = 0$  are conjugate. Hence show that the equation of the axes of the conic may be written in the form

$$(a-b)\{Cry - Fx - Gy + H\} - h\{C(x^2 - y^2) + 2Fy - 2Gx + A - B\} = 0.$$

Solution by G. D. WILSON, B.A.

The condition that the lines  $lx + my + n = 0$  and  $Lx + My + N = 0$  should be conjugate with respect to the conic is

$$A/L + B/m + C/n + F(mN + nM) + G(nL + nN) + H(M + nL) = 0;$$

therefore, if the lines  $x - \xi = 0$  and  $y - \eta = 0$  are conjugate,

$$C\xi\eta - F\xi - G\eta + H = 0,$$

and, if the lines  $x + y - \xi - \eta = 0$  and  $x - y - \xi + \eta = 0$  are conjugate,

$$C(\xi^2 - \eta^2) + 2F\eta - 2G\xi + A - B = 0.$$

These define the locus of the point  $(\xi, \eta)$  in each case. Both these loci must pass through the four foci. Now the axes form a conic passing through the foci and the centre  $(G/C, F/C)$ . Hence the equation of the axes can be written

$$\lambda \{Cxy - Fx - Gy + H\} + \{C(x^2 - y^2) + 2Fy - 2Gx + A - B\} = 0$$

where  $\lambda \{CH - FG\} + \{AC - G^2 - BC + F^2\} = 0;$

so that  $\lambda = -(a-b)/h.$

**14448.** (V. SRINIVASA RANGACHARI, B.A.)—OA, OB are two straight lines fixed in direction, and P any point within or without them. It is required to draw through P a straight line so that the part of it intercepted between the given straight lines may be of given length.

Remarks by GEORGE SCOTT, M.A.

This problem has long been recognized as insoluble by elementary geometry, i.e., when only ruler and compass are allowed to be employed. The problem can be solved graphically by the use of the trammel or by tracing the conchoid of NICOMEDES and finding its intersections with one of the lines.

FIG. 1.

FIG. 2.

[Before consising this problem to limbo, a brief analysis of what can be determined regarding it may prove useful.

Let OC, perpendicular to OA (Fig. 1.), equal half the required line when P is between the lines (the only case we need examine). Draw CD parallel to OA, cutting OB in D. Then the circle EDF, described about O as centre, is the locus of the circumcentre of OXY (or OX'Y', for there are two lines possible in this case). Having the circum-radius given, and the length of the required line XY, take M as the centre of the circle (Fig. 2), and join MX, MY. Moreover, make  $\angle XMN = 2\angle XON$  (given by Fig. 1). Then N is a known point, and NG (perpendicular to XY) is also known; also GX, GY are known. Produce NG to H, making  $GH = OP$  (given by Fig. 1). Then the conchoid of NICOMEDES (in respect of the point N and the line XY, together with the constant  $GH = OP$ ) cuts the circle in O and O', and we obtain OX, OY or OX', OY' for application to Fig. 1. Otherwise, with N as origin and NM as axis, the loop of a limaçon can be drawn,  $\rho = a \cos \theta - b$ , where  $a = 2NM$  and  $b = OP$ . This will intersect XY in P, P'.

But, algebraically, we may take  $PN = u, XY = a, OP = b, NG = c, GX = d$ . Then

$$bu = \{d - \sqrt{(u^2 - c^2)}\} \{a - d + \sqrt{(u^2 - c^2)}\} = R^2 - MP^2,$$

whence we readily obtain a biquadratic in  $u$ . This should enable us to assign two positive values to PN. Then, bisecting ON and drawing LM at right angles to meet the locus EDF in M, we are able at once to find X, Y by describing the circle through O.

For the case in which P is external to OA, OB, similar reasoning applies, but here the solution depends on Euc. III. 36, and the value of  $u$  is negative.]

**14409.** (F. H. PEACHELL, B.A.)—In a newspaper competition, in which a prize of £ $x$  is offered, every correct coupon obtains an equal share of the prize, and a competitor may send in as many coupons as he likes. A person enters for this competition, and it is found that there are  $y$  correct coupons besides his own. What number of coupons (all correct) should he have sent in in order that his net profit may be the greatest possible, supposing each coupon to cost him  $s$  pence? Find also the amount of this profit.

Solution by H. W. CURJEL, M.A.

If  $\xi$  is the number of coupons, then  $\xi$  is the greatest integer, such that

$$240x \left( \frac{\xi}{\xi + y} - \frac{\xi - 1}{\xi + y - 1} \right) > s,$$

i.e., such that

$$(\xi + y)(\xi + y - 1) < 240xy/s,$$

i.e.,

$$(2\xi + 2y - 1)^2 < 960xy/s + 1;$$

therefore  $2\xi + 2y - 1 = \text{greatest odd integer } n \text{ } (960xy/s + 1)^{1/2}$

$$= 2k - 1, \text{ say.}$$

Then  $\xi = k - y$ , and net profit =  $\left\{ \frac{240x(k-y)}{k} - ks \right\}$  pence.

[Rev. T. ROACH, M.A., solves the first part of the question as follows:—Let A send in  $p$  coupons; then he receives  $240xp/(p+y) - ps$  pence. For a maximum  $240x/(p+y) - s + p(-240x/(p+y)^2) = 0;$

therefore  $p = (240xy/s)^{1/2} - y,$

which is in virtual agreement with Mr. CURJEL's result.]

**14389.** (Rev. A. M. WILCOX, M.A.)—If a straight line be drawn from the figure X to the figure XII on a clock, and another from the figure IX to the figure I, all the figures being supposed on the circumference, prove that the area of the dial between the straight lines is one-sixth of the whole area.

Solution by Rev. T. WIGGINS, B.A.; and L. E. REAY, B.A.

Required area

$$\begin{aligned} &= AEB - DEC \\ &= (OAEB - OAB) - (ODEC - ODC) \\ &= \left( \frac{\pi r^2}{3} - \frac{r^2\sqrt{3}}{2} \right) - \left( \frac{\pi r^2}{6} - \frac{r^2\sqrt{3}}{2} \right) \\ &= \frac{\pi r^2}{6}. \end{aligned}$$

**14417.** (J. A. THIRD, D.Sc.)—The locus of the centre of a variable inconic K of a triangle is a conic having (imaginary) double contact with the maximum inscribed ellipse on the line  $\Sigma a \cos A = 0$ , if the locus of the point of concurrence of the lines joining the points of contact of K with the sides to the opposite vertices is the envelope of a system of similar circumconics.

Solution by Rev. J. CULLEN.

Let  $(x, y, z)$  be the point of concurrence; then the equation of the inconic is  $\Sigma (a/x)^2 = 0$ . Also, if  $(\alpha, \beta, \gamma)$  be its centre, we have  $1/x \equiv a(S - \alpha a)$ ,  $(2S - \Sigma a\alpha)$ . Now the condition for a system of similar circumconics which are similar to  $\Sigma/x = 0$  is

$$\Sigma (l \sin A)^2 - 2\Sigma mn \sin B \sin C = k\Sigma (l \cos A)^2.$$

Hence the equation of the envelope is

$$k\Sigma (\sin A/x)^2 - 2\Sigma [(1+k)2 \sin^2 A \sin B \sin C - k \sin B \sin C]/yz = 0.$$

Substituting for  $x, \&c.$ , we get

$$(1+k) [\Sigma (aa)^2 - 2\Sigma bc\beta\gamma] + 4R^2k\Sigma (a \cos A)^2 = 0,$$

R being the radius of the circumcircle of the triangle of reference. Therefore, &c.

**14311.** (Professor U. C. GHOSH.)—Points  $O_1, O_2, O_3, \dots, O_n$  are taken in order on the circumference of a circle circumscribing a triangle ABC. If  $AO_1, AO_2, AO_3, \dots, AO_n, BO_1, BO_2, BO_3, \dots, BO_n, CO_1, CO_2, CO_3, \dots, CO_n$  cut BC at  $G_1, G_2, G_3, \dots, G_n, AC$  at  $F_1, F_2, F_3, \dots, F_n$ , and AB at  $H_1, H_2, H_3, \dots, H_n$ , respectively, show that (1)  $F_1H_1, F_2H_2, F_3H_3, \dots, F_nH_n$  will all pass through the same point A'; (2)  $\angle F_r A' F_{r+1} = \angle G_r O G_{r+1}$ , O being the centre of the circle; (3) if  $N_1, N_2, N_3, \dots, N_n$  be the points of intersection of  $OG_1, OG_2, OG_3, \dots, OG_n$  with  $F_1H_1, F_2H_2, F_3H_3, \dots, F_nH_n$ , they will lie on the circumference of the circle described on  $OA'$  as diameter.

Solution by Professor A. DROZ-FARNY.

Dans le quadrilatère inscriptible ABO<sub>1</sub>C, G<sub>1</sub> est le point de coupe des paires de côtés opposés.

Il en résulte que le triangle F<sub>1</sub>G<sub>1</sub>H<sub>1</sub> est autopolaire par rapport à la circonférence; G<sub>1</sub> se trouvant sur BC, sa polaire F<sub>1</sub>H<sub>1</sub> passe par le pôle A' de BC.

En outre OG<sub>1</sub> est perpendiculaire sur F<sub>1</sub>H<sub>1</sub>, ce qui démontre les deux dernières parties.

**10344.** (Professor MOREL.)—Si  $a$  est un nombre impair premier avec 3 et 5,  $(a^2 - 1)(a^4 - 16) \{a^2 - (2n + 1)^2\}^2$  est divisible par 23040.

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

Every odd number  $a$  is of form  $a = 4i \pm 1$ ; therefore  $a^2 = 8j + 1$ . Here  $a$  and  $(2n + 1)$  are both odd; therefore  $a^2 - 1 = 8a$  and

$$\{a^2 - (2n + 1)^2\}^2 = (8a)^2 = 64a^2.$$

Again,  $a$  being prime to 3,  $a = 3\beta \pm 1$ ; therefore  $a^2 = 3\beta^2 + 1, a^4 = 3\beta^4 + 1$ ; therefore  $(a^2 - 1)(a^4 - 16) = 3\beta^2(3\beta^2 - 15) = 9\beta^2 \cdot 2(\beta^2 - 5)$ .

Again,  $a$  being prime to 5,  $a = 5\gamma \pm 1$  or  $5\gamma \pm 2$ ,  $a^2 = 5\gamma' \pm 1$ ,  $a^4 = 5\gamma'' + 1$ ; therefore  $(a^4 - 1) = 5\gamma''$ .

Thus the complete product is divisible by  $8 \times 64 \times 9 \times 5 = 23040$ .

Cor.—Similarly it may be shown that, if  $a, b$  be odd numbers and prime to 15, then the continued product to  $n$  terms  $(a^2 - b^2)(a^4 - b^4)(a^8 - b^8) \dots$  contains  $2^{4n(n+5)} \cdot 3^n \cdot 5^{n-1}$ .

14317. (G. H. HARDY, B.A.)—Prove FRULLANI'S theorem

$$\int_0^\infty \frac{\phi(ax) - \phi(bx)}{x} dx = \{\phi(\infty) - \phi(0)\} \log a/b,$$

extending it to apply to the cases in which (1)  $\phi(x)$ , while possessing a determinate integral near any value of  $x$ , has a discrete set of infinities in the range  $(0, \infty)$ ; (2) only the principal value of the integral is determinate. Consider also the case in which  $\phi(x)$  oscillates at infinity between finite or infinite limits. As examples, evaluate

$$\int_0^\infty \log \left( \frac{1 - pe^{-ax}}{1 - pe^{-bx}} \right) \frac{dx}{x}, \quad \int_0^\infty \left( \frac{e^{-ax} - e^{-bx}}{x} \right)^2 dx,$$

$$\int_0^\infty \left( \frac{1}{\cos ax} - \frac{1}{\cos bx} \right) \frac{dx}{x}, \quad \int_0^\infty \left( \frac{1}{\cos ax} - \frac{1}{\cosh bx} \right) \frac{dx}{x}.$$

[The last two integrals are defined by their principal values.]

Solution by the PROPOSER.

The usual proof of the formula is, if  $b > a$ ,

$$\lim_{h \rightarrow 0, H \rightarrow \infty} \int_h^H \frac{\phi(ax) - \phi(bx)}{x} dx = \lim_{h \rightarrow 0, H \rightarrow \infty} \left( \int_{ah}^{bh} + \int_{aH}^{bH} \right) \phi(x) \frac{dx}{x} = \{\phi(\infty) - \phi(0)\} \log a/b.$$

Now, provided  $\phi(\infty)$ ,  $\phi(0)$  be determinate, this remains valid under the conditions (1); for we can choose  $h, H$  initially so that all the infinities of  $\phi(ax)$ ,  $\phi(bx)$  fall in  $(h, H)$ . And the same is true under conditions (2).

Thus, 
$$\int_0^\infty \log \left( \frac{1 - pe^{-ax}}{1 - pe^{-bx}} \right) \frac{dx}{x} = \log(1-p)^2 \log \frac{b}{a},$$

whether  $p$  be  $>$  or  $<$  1. And

$$P \int_0^\infty \left( \frac{1}{1-ax} - \frac{1}{1-bx} \right) \frac{dx}{x} = \log \left( \frac{b}{a} \right).$$

[The rest in Vol.]

14239. (B. N. CAMA, M.A. In continuation of *Quests.* 14177 and 14207.)—If  $OP_1P_2 \dots, OQ_1Q_2 \dots$  be two vectors including a right angle, meeting an equiangular spiral (pole  $O$ ) in the points  $P_1, P_2, \dots, Q_1, Q_2, \dots$ , show that the parabolas drawn to touch the curve at  $P_1Q_1, P_2Q_2, \dots$ , and having the chords of contact for their focal chords are in geometrical progression; further, that their axes are parallel to a fixed line.

Solution by the PROPOSER.

It is clear that  $P_1Q_1$  is parallel to  $P_2Q_2$ . Now the latus rectum of the parabola  $P_1Q_1$  is

$$(OP_1^2 + OQ_1^2)^{\frac{1}{2}} \sin^2 \phi;$$

i.e., 
$$= a(e^{2\psi \cot \alpha} + e^{2(\psi - \pi) \cot \alpha})^{\frac{1}{2}} \sin^2 \phi$$

$$= ae^{\psi \cot \alpha} (1 + e^{-\pi \cot \alpha})^{\frac{1}{2}} \sin^2 \phi.$$

For the parabola  $P_2Q_2$ , it is

$$(OP_2^2 + OQ_2^2)^{\frac{1}{2}} \sin^2 \phi';$$

i.e., 
$$= a(e^{2(\psi + \pi) \cot \alpha} + e^{2(\psi + \pi - \pi) \cot \alpha})^{\frac{1}{2}} \sin^2 \phi'$$

$$= ae^{(\psi + \pi) \cot \alpha} (1 + e^{-\pi \cot \alpha})^{\frac{1}{2}} \sin^2 \phi'.$$

Also  $\phi = \phi'$ , since each  $= 2(\psi - \alpha)$ .

Thus the latera recta are proportional to  $1, e^{\pi \cot \alpha}, e^{2\pi \cot \alpha}, \dots$ ;

therefore the curves are in G.P.

Also, the  $\phi$ 's being the same, and  $P_1Q_1, P_2Q_2, \dots$  being parallel, the axes are parallel.

QUESTIONS FOR SOLUTION.

14480. (Professor G. B. MATHEWS, M.A., F.R.S.)—Let the vertices  $X, Y, Z$  of an equilateral right-angled spherical triangle be denoted by 000, 010, 001; and let any point  $P$  be called rational and denoted by  $abc$  when  $\cos PX : \cos PY : \cos PZ = p_1 : p_2 : p_3$ , where  $p_1, p_2, p_3$  are positive integers. Further, let a triangle  $ABC$  whose vertices are rational be called a unit triangle when the determinant  $\Sigma \pm a_1 b_2 c_3 = \pm 1$ . It is required (1) to prove that, if  $ABC \dots L$  is a spherical polygon whose vertices are rational, it can be divided into unit triangles; (2) to find the least number of such triangles. [Example.—The triangle whose vertices are 100, 230, 503 can be decomposed into 12 unit triangles whose vertices are, respectively, (100, 110, 201), (110, 230, 311), (311, 230, 431), (431, 230, 321), (431, 321, 311), (311, 321, 522), (522, 321, 412), (622, 412, 311), (311, 412, 613), (613, 412, 503), (613, 503, 311), (311, 503, 201). Is this the simplest decomposition? If not, which is?]

14481. (H. M. TAYLOR, M.A., F.R.S. Suggested by *Quest.* 14382.)—On the sides of a triangle  $A'B'C'$ , triangles  $B'C'A, C'A'B, A'B'C$  are

constructed similar to three given triangles. Having given the triangle  $ABC$  and the three triangles, reconstruct the triangle  $A'B'C'$ .

14482. (Professor NEUBERG.)—Soient  $a, b, c, d$  les côtés  $AB, BC, CD, DA$  d'un quadrilatère sphérique  $ABCD$  circonscrit à un petit cercle. Démontrer la relation  $\sin a \sin b \cos^2 \frac{1}{2} B = \sin c \sin d \cos^2 \frac{1}{2} D$ .

14483. (Professor S. SIRCOM, M.A.)—Obtain the current function for the motion along  $OX$ , in an infinite liquid under no forces, of the cylinder whose right section is

$$\{(x+a)^2 + y^2\} \{(x-b)^2 + y^2\} = m(a+b)^2(x^2 + y^2),$$

where  $m > 1$ . [If  $m = 1$ , we have the case of two orthogonal circles.]

14484. (Professor A. DROZ-FARNY.)—On joint un point  $A$  de la directrice d'une parabole au sommet  $S$  de cette dernière.  $AS$  coupe la courbe en un second point  $B$ . La tangente en  $B$  rencontre en  $P$  le diamètre de la parabole mené par  $A$ . Tirons la deuxième tangente  $PC$ . La droite  $CB$  est normale en  $B$  à la parabole.

14485. (Professor SANJANA, M.A.)—Eliminate  $p$  and  $q$  from  $x = p(p-2), y = q(q+2)$ , and  $p^2 - q^2 = 4$ .

14486. (Professor COCHEZ.)—Courbe  $\rho^2 - 2\rho + \tan \omega - 3 = 0$ .

14487. (J. A. THIRD, D.Sc.)—In *Quest.* 14292, show that, if the locus of  $S$  is  $LMN$ , the locus of  $P$  is the conic which touches the sides of  $ABC$  at  $L', M', N'$ ; and that, if the locus of  $P$  is  $LMN$ , the locus of  $S$  is the circumconic which touches  $AL, BM, CN$ .

14488. (Professor UMES CHANDRA GHOSH.)—If the vertical angle  $A$  and base  $BC (= a)$  of a triangle  $ABC$  are given, show that the locus of its BROCARD points is

$$(x^2 + y^2)^2 - a(x^2 + y^2)(x + y \cot A) + 4R^2 y^2 = 0,$$

$R$  being the radius of the circumcircle of the triangle,  $B$  the origin, and  $BC$  the axis of  $x$ .

14489. (Professor N. BHATTACHARYYA.)—A triangle  $ABC$  is such that its circumcentre is coincident with the centre of its BROCARD ellipse. The lines  $AN, BQ, CR$  meet the opposite sides in  $D, E, F$ , respectively; and likewise the lines  $AN', BQ', CR'$  meet the opposite sides in  $D', E', F'$ , respectively. Let the lines  $EF, E'F'; FD, F'D'; DE, D'E'$  meet, produced, if necessary, in  $P, Q, R$ , respectively. Prove that (1) the lines  $AP, BQ, CR$  are concurrent; (2) the sum of the squares of the axes of the ellipse  $= 4(5R^2 - 2\Delta \cot \omega)$ , where  $R$  denotes the circumradius,  $\Delta$  the area, and  $\omega$  the BROCARD angle of the triangle.

14490. (D. BIDDLE. In continuation of *Quest.* 14457.)—Let it be known that a factor of  $N$  is  $\Delta p + 1$ , and let  $N = \Delta a + 1$ . Again, let  $a_1 = \Delta a_2 + c_2, a_2 = \Delta a_3 + c_3, \dots$ ; or, in general,  $a_n = (a_{n-1} + c_n)/\Delta$ . Prove that  $a_n - p c_n + p^2 c_{n-1} - p^3 c_{n-2} + \dots \pm p^n$  is a multiple of  $\Delta p + 1$ , for all values of  $n$  within the range. Further, supposing  $p$  to be unknown, show that, if  $a_n - n c_n + n^2 c_{n-1} - n^3 c_{n-2} + \dots \pm n^n$  be a multiple of  $\Delta n + 1$ , then  $\Delta n + 1$  is a factor of  $N$ .

14491. (R. TUCKER, M.A.)—Squares are described externally on the sides of the triangle  $ABC$ , and tangents are drawn from their centres to the incircle of the triangle. Prove that

$$2\Sigma(\text{tangents})^2 = 2\Delta(2 + 3 \cot \omega) - \Sigma(bc).$$

14492. (R. F. DAVIS, M.A.)—The tangent at any point  $P$  of the conic  $ax^2 + 2hxy + by^2 + 2fy = 0$  intersects the axis of  $x$  in  $T$ , and upon  $PT$  a point  $Q$  is taken such that the angle  $QOT = 2POT$ . Prove (without imaginaries) that the locus of  $Q$  is a straight line. Deduce FRÉCHET'S theorem.

14493. (J. H. TAYLOR, M.A.)—If  $A', B', C'$  are vertices of similar isosceles triangles described all externally, or all internally, on the sides of any plane triangle  $BCA$ , the straight lines  $AA', BB', CC'$  are equal and concurrent.

14494. (Rev. T. ROACH, M.A.)—Along the hedge of a circular field of radius  $r$  are placed  $2n$  heavy posts at equal distances. A man brings the posts together, one at a time, to one post. Show that the product of the  $2n - 1$  walks multiplied together  $= 2^{2n} \cdot r^{2n-1} \cdot n$ .

14495. (R. C. ARCHIBALD, M.A.)—The points  $p_1, p_2, p_3$ , where the three parallel tangents to a cardioid cut the double tangent perpendicular to the axis, are joined to the centre  $O$  of the fixed circle. Prove, geometrically or analytically, that the angles  $p_1Op_2, p_2Op_3$  are each equal to  $60^\circ$ .

14496. (G. H. HARDY, B.A.)—Prove that  $\Sigma \sigma^2(u) \sigma_1^2(v) \sigma_2^2(r) \sigma_3^2(r) = \{\rho(u+r) + \rho(u-r)\} \sigma^2(u+v) \sigma^2(u-v)$ ; the notation being that of WEIERSTRASS'S theory of elliptic functions, and the summation applying to the six possible divisions into pairs of the functions  $\sigma, \sigma_1, \sigma_2, \sigma_3$ .

14497. (R. P. PARANJPE, B.A.)—Show that any triangle can be projected into a triangle of given form so that the circle inscribed in the latter may have the projection of a given point as centre.

14498. (HUGH MACCOLL, B.A.)—Let  $A = \text{If } a \text{ is true, } x \text{ is true}$ ;  $B = \text{If } \beta \text{ is true, } x \text{ is true}$ ;  $C = \text{If } \alpha \text{ and } \beta \text{ are both true, } x \text{ is true}$ ;  $V = \text{If either } A \text{ or } B \text{ is true, } C \text{ is true}$ ;  $W = \text{If } C \text{ is true, either } A \text{ or } B$

B is true. Is V a formal certainty? Is W? As a particular case, suppose P and Q to be two poisons which are deadly when taken separately, but mutually counteracting and harmless when taken together, and that A = He has just taken P, B = He has just taken Q; and x = He will die (that is, from the poison or poisons).

**14499.** (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Prove that the continued product  $P = (a \mp b)(a^3 \mp b^3)(a^5 \mp b^5) \dots (a^{2n-1} \mp b^{2n-1})$  is divisible by  $\{(2n)! + (2^n \cdot n!)\}^{n+1}$  if  $(a \mp b)$  is divisible by  $(2n)! + (2^n \cdot n!)$ .

**14500.** (G. D. WILSON, B.A.)—Prove that, for the series 1, 3, 11, 41, ... in which  $u_{n+1} + u_{n-1} = 4u_n$ ,  
 $u_p + u_q = u_{\frac{1}{2}(p+q)} \{u_{\frac{1}{2}(p-q)} + u_{\frac{1}{2}(p+q+1)}\}$ , if  $p+q$  be even,  
 and  $u_p + u_q = u_{\frac{1}{2}(p+q+1)} \{u_{\frac{1}{2}(p+q-1)} + u_{\frac{1}{2}(p+q+1)}\}$ , if  $p+q$  be odd.

**14501.** (Rev. T. WIGGINS, B.A.)—Given a triangle ABC, find a point D within it such that  $DA^2 + DB^2 + DC^2$  is a minimum.

**14502.** (J. J. BARNVILLE, B.A.)—Having  $u_{n-1} + u_{n+1} = 7u_n$ , prove that  

$$\frac{1}{1+1} + \frac{1}{6+1} + \frac{1}{41+1} + \frac{1}{281+1} + \dots = 2\sqrt{5}$$

$$\frac{1}{1+6} + \frac{1}{6+6} + \frac{1}{41+6} + \frac{1}{281+6} + \dots = 16\sqrt{5}$$

$$\frac{1}{2+3} + \frac{1}{7+3} + \frac{1}{47+3} + \frac{1}{322+3} + \dots = \frac{\sqrt{5}+1}{10}$$

$$\frac{1}{2+7} + \frac{1}{7+7} + \frac{1}{47+7} + \frac{1}{322+7} + \dots = 18$$

$$\frac{1}{1+1} + \frac{1}{8-1} + \frac{1}{55+1} + \frac{1}{377-1} + \dots = \frac{\sqrt{5}}{6}$$

$$\frac{1}{1^2+1} + \frac{1}{2^2+1} + \frac{1}{13^2+1} + \frac{1}{89^2+1} + \dots = \frac{\sqrt{5}+2}{6}$$

**14503.** (ROBERT W. D. CHRISTIE.)—Show that the primitive roots of 331 are connected with the associated roots by the modular equations  $r^m = \omega \pmod{331}$ ,  $r_1^m = -\omega^2 \pmod{331}$ ,

where  $r$  is a primitive, and  $r_1$  an associated, root; also  $\omega$  signifies one of the roots of  $x^3 + 1 = 0$ , namely,  $\frac{1}{2}\{1 + \sqrt{-3}\}$  or  $\frac{1}{2}\{1 - \sqrt{-3}\}$ ; and generalize the result.

**14504.** (R. KNOWLES.)—The circle of curvature is drawn at a point P of a parabola; PQ is the common chord: an ordinate from P to the diameter through the focus meets the parabola in R, and a diameter through Q in O. If T be the pole of PQ with respect to the parabola, prove that TO, PQ, and the tangent at R are parallel.

**14505.** (ANON.)—A small ring P of mass  $m$  is acted on by gravity, and by a force  $\mu PA$  towards a fixed point A. It is placed on a circular wire, radius  $a$ , angle of friction  $\frac{1}{4}\pi$ , at rest in a vertical plane, with its centre C vertically below A. If  $AC = c$  and  $(\mu c - mg)\sqrt{3} = \mu a$ , find the limits between which equilibrium may exist. If the wire be slowly rotated in its plane around its centre, what will happen to the small ring when released from rest, distinguishing the different portions of the ring according to the effect produced? [Trinity College, 1895.]

**14506.** (Rev. J. CULLEN.)—Let  $H \equiv a_1, a_1, \dots, a_n \pmod{P} \equiv \beta_1, \beta_2, \dots, \beta_m \pmod{Q}$  be the possible forms of the half-sums of the factors of a given number N; P being the product of certain small primes,  $2^r, 3^s$ , and  $\Delta^2$  (the factors being of the known form  $\Delta m + 1$ ), and Q the product of two (or more) primes not contained in P. Then, if the solutions of

$$P\lambda + \alpha_1 \equiv \beta_1, \beta_2, \dots, \beta_m + \mu Q = P\lambda' + \alpha_2$$

be  $\lambda \equiv \beta'_1, \beta'_2, \dots, \beta'_m \pmod{Q}$  and  $\lambda' \equiv \beta''_1, \beta''_2, \dots, \beta''_m \pmod{Q}$ , show (1) that  $\beta'_1 - \beta'_1 = \dots = \beta''_m - \beta''_m = d$ , a constant; (2) how to draw up a strip for a prime  $p$  (not contained in P or Q) with  $n$  symbols corresponding to  $\alpha_1, \alpha_2, \dots, \alpha_n$  in each division; (3) that the same strip can be used for  $\beta_1, \beta_2, \dots$  [The tentative work for numbers like 54, 979, 718, 449, 197 (factor of  $10^{16} - 1$ ) may be much shortened in this manner, and the strips may be written down from position.]

**14507.** (EDWARD V. HUNTINGTON, A.M.)—Given  $f(x_1) + f(x_2) + \dots + f(x_n) = 0$ , where the  $x$ 's may be chosen at pleasure provided  $x_1 + x_2 + \dots + x_n = 0$ . It is evident that, if  $f(x) = Cx$ , the condition is satisfied. Prove that this is the only admissible form of the function.

**14508.** (W. H. SALMON, B.A.)—The frustum of a pyramid with quadrilateral base is such that the intersections of the opposite faces are coplanar (A); prove that (1) the diagonals of the frustum are concurrent (O); (2) each diagonal of the frustum is divided harmonically by O and its point of intersection with A; (3) the diagonals of each face are divided harmonically by their point of intersection and the plane A.

**14509.** (I. ARNOLD.)—Given two circles, one within the other, a point P can be found such that the extreme portions of any right line cutting both circles shall subtend equal angles at P.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**6405.** (The late Professor SYLVESTER, F.R.S.)—If  $p, q, r, s$  are the distances of a point in a circular cubic from the four concyclic foci A, B, C, D, prove that

$$\begin{aligned} \frac{(p-q)(q-r)(r-p)}{ABC} &= \frac{(q-r)(r-s)(s-q)}{BCD} \\ &= \frac{(r-s)(s-p)(p-r)}{CDA} = \frac{(s-p)(p-q)(q-s)}{DAB} \end{aligned}$$

**6409.** (Professor MATZ, M.A.)—A point is taken at random on each side of a regular hexagon, and these points are joined by straight lines to the centre of the hexagon. On each one of these lines a point is taken at random. If the first set of random points be joined in their respective order, find the mean area of the hexagon thus formed; also, do the same if the second set of random points be joined in their respective order.

**6419.** (J. J. WALKER, M.A.)—Three lines in space are determined each by a pair of planes

$$m_1 \equiv B_1y + C_1z + 1 = 0, \quad x + u_1 = 0, \quad (n_1 \equiv D_1y + E_1z) \dots$$

Prove that the equation to the pair of planes through the axis  $y = 0, z = 0$ , and one of the two lines meeting it and each of those three lines, is

$$\begin{vmatrix} 1 & 1 & 1 \\ m_1 & m_2 & m_3 \\ n_1 & n_2 & n_3 \end{vmatrix} = 0.$$

**6467.** (Colonel CLARKE, C.B., F.R.S.)—A given finite straight line is intersected in two points by a circle; find (1) the most probable length of the intercepted segment, and (2) the chance that it contains the middle point of the given line.

**6487.** (W. A. WHITWORTH, M.A.)—Express all the numbers from 1 to 140 by four nines. Algebraical symbols and decimal points may be used, but the expression for each number must contain the four nines and no other figure. Also express the same series of numbers by four fours. [As an example of what is required, Mr. WHITWORTH gives the number 34 thus:— $34 = (99 + \sqrt{9})/\sqrt{9} = 4 \times 4 \times \sqrt{4} + \sqrt{4}$ .]

**6495.** (W. S. B. WOOLHOUSE, F.R.A.S.)—If within a given enclosed area three points be taken at random as the apices of a triangle, show that (1) the average of the square of the area of all such triangles will be reduced to one-third the value, if one of the points be fixed at the centre; also, (2) if within a given volume of space four points be taken at random as the apices of a tetrahedron, the average of the square of the volume of all such tetrahedra will be reduced to one-fourth the value if one point be fixed at the centre; and (3) that this theorem is true when the enclosed area or volume of space is of any form whatever.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

**NOTICE.**—Vol. LXXII. of the "Mathematical Reprint" is nearly ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.O. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, February 8, 1900.—Professor Elliott, F.R.S., Vice-President, and subsequently Lt.-Col. Cunningham, R.E., Vice-President, in the Chair. Twelve members present.

Professor Elliott announced that the Council had passed the following resolution, viz.: "That, the objects of the London Mathematical Society requiring that it shall consist of more than 250 members, it is resolved that the number of its members may be increased by further elections to 350"; and that the same had been registered at Somerset House.

Professor Love gave a sketch of a paper by Mr. J. H. Michell, entitled "Some Elementary Distributions of Stress in Three Dimensions." Dr. J. Larmor joined in a discussion of the paper.

Major MacMahon gave an interesting account of recent work on "Combinatorial Analysis: the Foundation of a New Theory." Lt.-Col. Cunningham asked several questions on the subject of the communication.

The following papers were taken as read—

"A Formula in the Theory of the Theta Functions," by Prof. A. C. Dixon.

"The Canonical Reduction of a Pair of Bilinear Forms" and "Reduction of a Generalized Linear Substitution to a Canonical Form; with a Dynamical Application," by Mr. Bromwich.

# BELL'S ILLUSTRATED CLASSICS

Edited by E. C. MARCHANT, M.A., late Classical Master at St. Paul's School.

THE special object of the Series is to make the editions as interesting and helpful as possible to the intelligent learner; and with this end in view, in addition to the usual apparatus of Introductions, Notes, Exercises, Grammatical Appendices, and Vocabularies, **Numerous Illustrations** have been introduced. These are gathered from the best sources, and chosen with a view to explaining the text, and making the reader more familiar with Greek and Roman life. Most of the Illustrations have been specially redrawn.

**Maps and Plans** are also inserted as required.

The Volumes are printed at the Oxford University Press, in pott 8vo size, and are issued at the uniform rate of **1s. 6d.** each (with or without Vocabularies).

The Texts and Vocabularies (without Notes), limp cloth, cut flush, **1s.** each.

## NOW READY.

- Cæsar.—De Bello Gallico. Book I.** Edited by A. C. LIDDELL, M.A., Assistant-Master at Nottingham High School. [*Shortly.*]
- Cæsar.—De Bello Gallico. Book II.** Edited by A. C. LIDDELL, M.A.
- Cæsar.—De Bello Gallico. Book III.** Edited by F. H. COLSON, M.A., Headmaster of Plymouth College, and G. M. GWYTHER, M.A., Assistant-Master.
- Cæsar.—De Bello Gallico. Book IV.** Edited by the Rev. A. W. UPCOTT, M.A., Headmaster of St. Edmund's School, Canterbury. Prescribed for London Matric. and O. and C. Schools.
- Cæsar.—De Bello Gallico. Book V.** Edited by A. REYNOLDS, M.A., Assistant-Master at Merchant Taylors' School. [*Shortly.*] Prescribed for London Matric., Oxford Local, O. and C. Schools, and College of Preceptors Certificate.
- Cæsar.—De Bello Gallico. Book VI.** Edited by J. T. PHILLIPSON, M.A., Headmaster of Christ's College, Finchley. Prescribed for Cambridge Local and College of Preceptors Certificate.
- Virgil.—Æneid. Book I.** Edited by the Rev. E. H. ESCOTT, M.A., Assistant-Master at Dulwich College. [*March.*]
- Virgil.—Æneid. Book II.** Edited by L. D. WAINWRIGHT, M.A., Assistant-Master at St. Paul's School. Prescribed for London Matric., January, 1901.
- Virgil.—Æneid. Book III.** Edited by L. D. WAINWRIGHT, M.A., Assistant-Master at St. Paul's School. With a Map of the Wanderings of Æneas.
- Virgil.—Æneid. Book IV.** Edited by A. S. WARMAN, B.A., Assistant-Master at the Grammar School, Manchester.
- Virgil.—Æneid. Book VI.** Edited by J. T. PHILLIPSON, M.A., Headmaster of Christ's College, Finchley. [*Preparing.*] Prescribed for Cambridge Local and College of Preceptors Certificate.
- Selections from Virgil's Æneid, Books VII.—XII.** Edited by W. G. COAST, B.A., Assistant-Master at Fettes College. [*Shortly.*]
- Eutropius. Books I. and II.** Edited by J. G. SPENCER, B.A., Assistant-Master at St. Paul's Preparatory School. Prescribed for College of Preceptors Certificate.
- Horace.—Odes. Book I.** Edited by C. G. BOTTING, B.A., Assistant-Master at St. Paul's School.
- Horace.—Odes. Book II.** Edited by C. G. BOTTING, B.A., Assistant-Master at St. Paul's School. [*Preparing.*]
- Horace.—Odes. Book III.** Edited by H. LATTER, M.A., Assistant-Master at Cheltenham College. [*Preparing.*]
- Cicero.—Speeches against Catiline, I. and II.** Edited by F. HERRING, M.A., Assistant-Master at Blundell's School, Tiverton. [*Shortly.*]
- Selections from Cicero.** Edited by J. F. CHARLES, B.A., Assistant-Master at the City of London School. [*Shortly.*]
- Xenophon.—Anabasis. Book I.** Edited by E. C. MARCHANT, M.A. [*March.*]
- Cornelius Nepos.—Epaminondas, Hannibal, Cato.** Edited by H. L. EARL, M.A., Assistant-Master at the Grammar School, Manchester.
- Livy. Book IX., chaps. i.—xxix.** Edited by W. C. FLAMSTEAD WALTERS, M.A.
- Hannibal's First Campaign in Italy.** Selected from Livy, Book XXI., and edited by F. E. A. TRAYNE, M.A., Assistant-Master at St. Paul's School.
- Ovid.—Metamorphoses. Book I.** Edited by G. H. WELLS, M.A., Assistant-Master at Merchant Taylors' School.
- Selections from Ovid's Metamorphoses.** Edited by J. W. E. PEARCE, M.A., Merton Court Preparatory School, Sidcup.
- Phædrus.—A Selection.** Edited by the Rev. R. H. CHAMBERS, M.A., Headmaster of Christ's College, Brecon. [*Shortly.*]
- Stories of Great Men.** Edited by the Rev. F. CONWAY, M.A., Assistant-Master at Merchant Taylors' School. [*Shortly.*]
- Elegiac Selections from Ovid.** Edited by F. COVERLEY SMITH, B.A., Assistant-Master at the High School, Nottingham. [*In the press.*]
- Ovid's Tristia. Book III.** Edited by H. R. WOOLRYCH, M.A., Headmaster of Blackheath School. [*In the press.*]

## BELL'S ILLUSTRATED LATIN READERS.

Uniform with the Illustrated Classics. Price One Shilling each.

**Scalæ Primæ.** Simple Stories and Fables for Translation. With Notes and Vocabulary. By J. G. SPENCER, B.A., St. Paul's Preparatory School.

**Scalæ Mediæ.** Extracts from Eutropius and Cæsar. With Notes and Vocabulary. By PERCY A. UNDERHILL, M.A.

**Scalæ Tertie.** Graduated Extracts in Prose and Verse from Cæsar, Nepos, Phædrus, and Ovid. With Notes and Vocabulary. By PERCY A. UNDERHILL, M.A. [*In preparation.*]

SPECIMEN COPIES POST FREE TO HEADMASTERS ON APPLICATION.

# OXFORD UNIVERSITY PRESS.

## MILTON.

JUST ISSUED. 8vo, price 7s. 6d.

### THE POETICAL WORKS OF JOHN MILTON.

EDITED BY H. C. BEECHING, M.A.

After the Original Text, with Facsimiles.

Also published by Henry Frowde, in the following sizes:—

WITH PORTRAIT AND FACSIMILES.

1. LARGE (LONG PRIMER) TYPE, Crown 8vo, 560 pages, cloth, boards, gilt top, 3s. 6d.
2. THE SAME, printed upon Oxford India Paper, superfine cloth, gilt top, 8s.  
(In these Editions the original spelling and punctuation are reproduced.)
3. MINIATURE EDITION, In one Volume, printed on Oxford India Paper, 32mo, 4 $\frac{3}{4}$  × 2 $\frac{1}{4}$  ×  $\frac{7}{8}$  inches, superfine cloth, 3s. 6d.  
(In this case the spelling and punctuation are modern.)

All these Volumes may be had in a variety of superior leather bindings produced at the Oxford University Press Binding House.

**Milton.—Areopagitica.** With Introduction and Notes. By JOHN W. HALES, M.A. New Edition. Extra fcap. 8vo, 3s.

— **Poems.** Edited by R. C. BROWNE, M.A. In two Volumes. New Edition, Revised. Extra fcap. 8vo, 6s. 6d. Sold separately, Vol. I., 4s.; Vol. II., 3s. In paper covers:—*Lycidas*, 3d.; *Comus*, 6d. Edited with Notes, by O. ELTON, B.A.:—*Lycidas*, 6d.; *L'Allegro*, 4d.; *Il Penseroso*, 4d.; *Comus*, 1s.

— **Paradise Lost.** Book I. Edited by H. C. BEECHING, M.A. Extra fcap. 8vo, stiff covers, 1s. 6d.; in parchment, 3s. 6d.

— **Paradise Lost.** Book II. Edited by E. K. CHAMBERS, B.A. Extra fcap. 8vo, 1s. 6d. \* \* \* Books I. and II. combined, 2s. 6d.

— **Samson Agonistes.** Edited, with Introduction and Notes, by J. CHURTON COLLINS, M.A. Extra fcap. 8vo, stiff covers, 1s.

**Milton's Prosody.** By ROBERT BRIDGES. Extra fcap. 8vo, stiff covers, 1s. 6d.

**Johnson's Life of Milton.** Edited by C. H. FIRTH, M.A. Extra fcap. 8vo, cloth, 2s. 6d.; stiff covers, 1s. 6d.

**Fuller.—Wise Words and Quaint Counsels of Thomas Fuller.** Selected by AUGUSTUS JESSOPP, D.D. Crown 8vo, 6s.

**Clarendon.—History of the Rebellion.** Book VI. Edited by T. ARNOLD, M.A. Second Edition. Crown 8vo, 5s.

— **Characters and Episodes of the Great Rebellion.** Selections from Clarendon. Edited by G. BOYLE, M.A., Dean of Salisbury. Crown 8vo, gilt top, 7s. 6d.

**Chaucer.—The Prologue to the Canterbury Tales.** (School Edition.) Edited by W. W. SKEAT, Litt.D. Extra fcap. 8vo, 1s.

— **The Prologue, The Knight's Tale, The Nonne Preestes Tale;** from the *Canterbury Tales*. Edited by R. MORRIS, LL.D. A New Edition, with Collations and Additional Notes by W. W. SKEAT, Litt.D. Extra fcap. 8vo, 2s. 6d.

— **The Prioresse Tale, Sir Thopas, The Monkes Tale, The Clerkes Tale, The Squires Tale, &c.** Edited by W. W. SKEAT, Litt.D. Seventh Edition, Revised. Extra fcap. 8vo, 4s. 6d.

— **The Tale of the Man of Lawe, The Pardoner's Tale, The Second Nonnes Tale, The Chanouns Yemannes Tale.** By W. W. SKEAT, Litt.D. New Edition, Revised. Extra fcap. 8vo, 4s. 6d.

## ST. THOMAS'S HOSPITAL MEDICAL SCHOOL, ALBERT EMBANKMENT, S.E.

The SUMMER SESSION will commence on TUESDAY, May 1st.

Students entering in the summer are eligible to compete for the Science Scholarships of £150 and £60 awarded in October.

A Scholarship of £50, open to University students, and other prizes and scholarships of the value of £500, are offered for annual competition.

All appointments are open to students without extra payment.

Special Classes for the Examinations of the University of London are held throughout the year.

Tutorial Classes are held prior to the Second and Final Examinations of the Conjoint Board in January, April, and July.

A register of approved lodgings and of private families receiving boarders is kept in Secretary's office.

Excellent Day Club accommodation is provided in the school building, and an athletic ground at Chiswick.

Prospectuses and all particulars may be obtained from the Medical Secretary, Mr. G. RENDLE.

H. P. HAWKINS, M.A., M.D. Oxon., *Dean*.

## CHARING CROSS HOSPITAL MEDICAL SCHOOL.

The SUMMER SESSION, 1900, will commence on Tuesday, May 1st.

The Livingstone Scholarship (100 guineas), the Huxley Scholarship (55 guineas), and six other Entrance Scholarships, total value £550, are awarded annually.

Two Scholarships of the value of 60 guineas each are reserved for Students of Oxford, Cambridge, or London University.

Students who join in Summer have the same privileges, as regards Scholarships, &c., as Students joining in October of the same year.

FEES.—For the five years' curriculum of study required by the various Examining Bodies and for Hospital Practice, 110 guineas in one sum, or 121 guineas in five instalments.

The composition fee for sons of registered medical practitioners is 100 guineas, and the fee by instalments, 110 guineas in five payments.

The composition fee for Dental Students is 54 guineas, or 60 guineas payable in two instalments of 30 guineas each.

A proportionate reduction of the above Fees is made to Students who have completed part of the curriculum elsewhere.

CHARING CROSS HOSPITAL is within three minutes' walk of the Dental Hospital of London, and the hours of Lectures are arranged to suit the convenience of both General and Dental Students.

The Hospital and School are situated within two minutes of both Charing Cross Stations, and the Athletic Ground at Eltham can be reached within half an hour from Charing Cross.

**THE SCHOOL PROSPECTUS, containing full information concerning the classes, prizes, and all other arrangements connected with the Medical School, will be sent on application to the Dean, Chandos Street, Strand, W.C.**

H. MONTAGUE MURRAY, *Dean*.

## THE DENTAL HOSPITAL OF LONDON MEDICAL SCHOOL, LEICESTER SQUARE.

The SUMMER SESSION, 1900, will commence on Tuesday, May 1st.

*Dental Anatomy and Physiology* (Human and Comparative)—Charles S. Fomes, F.R.S., M.A. Oxon., F.R.C.S., L.D.S., on Tuesdays and Thursdays, at 5 p.m. (Summer). (*Demonstrator*—A. Hopewell Smith, L.R.C.P., M.R.C.S., L.D.S.)

*Dental Surgery and Pathology*—William Hern, M.R.C.S., L.D.S., on Tuesdays and Fridays, at 8 a.m. (Summer). (*Demonstrator*—R. Herschell, L.D.S.)

*Mechanical Dentistry*—E. Lloyd Williams, L.R.C.P., M.R.C.S., L.D.S., L.S.A., on Wednesdays, at 5.30 p.m. (Winter).

*Metalurgy and its application to Dental Purposes*—Dr. Forster Morley, M.A., F.I.C., F.C.S., on Thursdays, at 5 p.m. (Winter). (*Demonstrator*—Percy Richards, F.I.C., F.C.S.)

The Hospital is open both morning and afternoon. During the Sessions the Surgeons of the day will give demonstrations at stated hours.

The Medical Tutor holds classes before each Examination for the L.D.S.

The House Surgeons attend daily while the Hospital is open.

The Saunders and Walker Scholarships, of £20 per annum each, and prizes are open for competition.

Fee for two years' Hospital Practice required by the curriculum, including Lectures, £50 in one payment, or 50 guineas in two yearly instalments. The curriculum requires two years to be passed at a General Hospital. The fee for this is about £55. Both Hospitals can be attended simultaneously.

The Fee for Three Years' Tuition in Mechanical Dentistry is 150 guineas.

The Calendar may be obtained on application to the DEAN, who attends at the Hospital on Wednesday mornings from 10.30 till 12 throughout the year.

MORTON SMALE, *Dean*.

## THE MIDDLESEX HOSPITAL MEDICAL SCHOOL, MORTIMER STREET, LONDON, W.

The SUMMER SESSION, 1900, will commence on Tuesday, May 1st.

Full opportunities for study are offered to students preparing for any of the Examinations in Medicine and Surgery in the United Kingdom.

Classes will be held in the following subjects:—Midwifery, Pathology, Pathological Histology, Bacteriology, Forensic Medicine and Public Health, Anatomy, Practical Physiology and Histology, Chemistry and Practical Chemistry, Materia Medica, Therapeutics, Psychological Medicine with Clinical Demonstrations, Practical Pharmacy.

Students entering in May are eligible to compete for the Entrance Scholarships (value £100 and £60) awarded at the commencement of the ensuing Winter Session. The Brodrip Scholarships, Governor's Prize, Hetley Prize, Lyell Medal, Leopold Hudson Prize, and Freeman Scholarship, are awarded annually, the Murray Scholarship (in connexion with the University of Aberdeen) every third year. Eighteen resident appointments are open for competition annually, without fee.

The composition fee, admitting to the whole curriculum, is 135 guineas; if paid in three instalments, first instalment 60 guineas.

For University of London Students requiring Preliminary Science Instruction, 150 guineas, or by instalments. For members of Universities recognized by the General Medical Council and other Students who have completed their Anatomical and Physiological Studies the fee for admission as General Student is 70 guineas, or by instalments, 75 guineas. Students from the Universities of Oxford and Cambridge entering in May are eligible to compete for the University Scholarship of £60 awarded at the commencement of the Winter Session. Fee for Dental Students, 54 guineas.

The New Laboratories and Class-rooms for Physiology, Chemistry, Biology, Pathology, Bacteriology, with all modern improvements, as well as a new and larger Dissecting Room and Operative Surgery Room are now in regular use.

The Residential College contains accommodation for thirty Students.

For prospectus and further particulars apply to

W. PASTEUR, M.D., *Dean*.

## LONDON HOSPITAL MEDICAL COLLEGE.

The SUMMER SESSION commences on May 1. Students entering then are eligible to compete for the Entrance Scholarships in September and October. Twenty-seven Scholarships and Prizes are offered annually.

Special arrangements are made to meet the requirements of students entering in the Summer Session. A reduction of 15 guineas is allowed to the sons of members of the profession.

Engagement of the College.—The new Laboratories and Class-rooms for Bacteriology, Public Health, Operative Surgery, Chemistry, Biology, &c., are now open.

For prospectus and full particulars apply to

Mile End, E. MUNRO SCOTT, *Warden*.

The Easter Term begins on Thursday, April 26th. Lectures are given in all branches of General and Higher Education.

Students are prepared for all the University of London Examinations in Arts and Science.

A single course of Lectures in any subject may be attended.

There is a Department for Professional Training in Teaching and an Art School.

Students can reside in the College.

Prospectus and all particulars on application to the PRINCIPAL.

## BEDFORD COLLEGE, LONDON (FOR WOMEN), YORK PLACE, BAKER STREET, W.

ENTRANCE SCHOLARSHIPS.

The Henry Tate Scholarship in Science, annual value £50; a Pfeiffer Scholarship in Science, annual value £48; a Reid Scholarship in Arts, annual value £31.10s.; all tenable for three years, will be awarded on the results of the Examination to be held at the College on June 26th and 27th. Candidates must be under 19 years of age on the first day of the examination.

For further information apply to the PRINCIPAL.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss M. PUNNETT, B.A. (Lond.).

The object of this College is to give a professional training to educated women who intend to teach. In addition to the course of training, it offers the advantages of a College life and one year's residence in Cambridge.

The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers, and are prepared for the Cambridge Teachers' Certificate (Theory and Practice). Ample opportunity is given for practice in teaching science, languages, mathematics, and the other usual school subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

## THE MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS, SALSBURY ROAD, BRONDESBURY, LONDON, N.W.

Principal—Miss ALICE WOODS.

A Full Course of Professional Training is offered to ladies who desire to become Teachers in Secondary Schools or in Kindergartens.

The Course for students preparing for the Cambridge Teachers' Certificate or for the London Teachers' Diploma begins in September or January, and lasts for one or two years. The Course for Kindergarten students preparing for the Higher Certificate of the National Froebel Union begins in September, and takes two years and one term.

Ample opportunities are given for Practice in Teaching in the School and Kindergarten of 150 pupils on the premises, as well as in other Schools.

The Winkworth Hall of Residence, close to the College, accommodates 20 students.

Scholarships to the amount of £230, from public and private sources, are annually awarded.

For all particulars as to qualifications for entrance, terms, scholarships, &c., apply to Miss ALICE WOODS, at the College.

THE

## FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

Chairman of the Committee—Mr. W. MATHER.

Treasurer—Mr. C. G. MONTEPIORE.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS—

Principal—Madame MICHAELIS.

Mistress of Method—Miss E. E. LAWRENCE.

KINDERGARTEN AND SCHOOL.

Headmistress—Miss M. BOYS SMITH.

Further particulars may be obtained on application to the PRINCIPAL.

## ST. GEORGE'S TRAINING COL- LEGE FOR WOMEN TEACHERS IN SECOND- ARY SCHOOLS AND IN FAMILIES.—This College

provides a complete Course of Professional Training for Women Teachers, in preparation for the Cambridge Teachers' Certificate. The Course includes attendance at the University, Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class-Teaching in Schools. Five Heriot Bursaries of £30 are offered in October. Apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

**OXFORD.**—Vacation Course for Women Students on English Language and Literature, by University Lecturers and Tutors. For information apply to Mrs. BURCH, 11 Beechcroft Road, Oxford.

**JOINT AGENCY FOR WOMEN TEACHERS.**

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

**THE JOINT AGENCY FOR MEN TEACHERS.**

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

- Headmasters' Conference.
- Incorporated Association of Headmasters.
- College of Preceptors.
- Teachers' Guild.
- Welsh County Schools' Association.
- Private Schools' Association.
- Association of Headmasters of Preparatory Schools.
- Association of Headmasters of Roman Catholic Schools.
- Assistant-Masters' Association.
- Association of Technical Institutions.
- &c.

The rates of Commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

**UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.**

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A.

The Session began October, 3rd, 1899. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts student, £11. 1s.; ditto for Intermediate Science or Medical student, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (beginning September 19), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the Prospectus, apply to

JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar.

**UNIVERSITY OF WALES.**—The SIXTH MATRICULATION EXAMINATION will commence on Monday, June 25, 1900. Particulars from the REGISTRAR, University Office, Brecon, from whom Forms of Entry can be obtained. Entries must be made not later than Monday, June 4, 1900.

**THE COLLEGE HALL OF RESIDENCE FOR WOMEN STUDENTS,**

BYNG PLACE, LONDON, W.C.

The Office of PRINCIPAL will become vacant at the end of the present session, and the Council are prepared to receive applications from intending candidates for the appointment up to the 15th of May.

For particulars apply, by letter, to the HON. SECRETARY at College Hall.

**London University Examinations.**

**UNIVERSITY TUTORIAL COLLEGE,**

Red Lion Square, Holborn, W.C.

**SECTIONS OF THE FOLLOWING DAY AND EVENING CLASSES**

The Institution prepares through the post for various University Examinations and for the **A.C.P.**, **L.C.P.**, and **F.C.P.**

*Seventh Edition.* With an Appendix of Easier Exercises.  
Fcap. 8vo, cloth, price One Shilling.

## HINTS ON FRENCH SYNTAX.

By F. STORR,

Chief Master of Modern Subjects in Merchant Taylors' School.

"The merit of the book is its simplicity and brevity, and we have no hesitation in saying that these *Hints* would prove a valuable supplement to any grammar that might be in use. . . . Neatly printed in clear, bold type, and interleaved throughout, this book is one we can confidently recommend not only to teachers for class use, but as an invaluable aid to students preparing for the Scholarship, Certificate, and London Matriculation Examinations."—*The Practical Teacher*, January, 1900.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

 *Headmasters should apply for*

### Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

### INTELLECTUAL EDUCATION.

To be delivered by JAMES SULLY, M.A., LL.D., Grote Professor of the Philosophy of Mind and Logic at University College, London.

#### SYLLABUS.

I.—Education in its relation to Natural Development—Historical Evolution of the Idea of Education—Different Aspects of Educational End: Fullness of Individual Development, Fitness for Life; Readiness for the Social State and the Duties of Citizenship—Respective Functions of Parent, State, and Teacher, in Education—Claims of the Home, of the Child's World, and of the Child's Inner Self—Relation of Education to Social Conditions, to the Spirit of the Age, and to Progress.

II.—Intellectual Education in its relation to Education as a Whole—General Value of the Intellectual Side of Man—Gradual Evolution of the End of Intellectual Education: from Practical Skill (the End of Savage Training) to Intelligence—Conflict of Ideas of different stages of Culture in Contemporary Discussions: Useful Knowledge versus Culture—The True Standard of "Knowledge-Values"—What a Cultivated Intelligence includes—In what sense Intelligence can exist in a Child.

III.—The Process of Mental Development—Growth of Intelligence or Gradual Storage and Assimilation of Material—The Part of Feeling and of Effort in Intellectual Development—The Organic Base of Intellectual Progress; the Efficiency of Sense-Organs, Muscles, and Brain—First Movements of Intelligence in the Child's own World (Play), and in the Search for Facts and Explanations—The Problem of the Young Child's Curiosity—The Too Much and the Too Little in the way of the Growth-Up's Stimulation of the Growing Intelligence.

IV.—(1) Intellectual Education begins by a Primary Presentation of Sense Material—The Wakefulness of the Early Senses—Animal and Human Senses compared—The Importance of the Finer Exercises of Eye, Ear, and Hand—Interest of Children in the Report of the Senses—Interest and Value of a Testing of the Senses—Over-training of the Senses.

V.—A Child's Interest is in Things rather than in Sensations—The Attitudes of Child and Animal towards the World of Objects—The Charm of the Ever Unfolding New—The Gradual Evolution of Interests and their Effect on Attention and Inquiry—The Teacher's Function in relation to young half-formed Interests—What Awakening an Interest means—The Place of Sturdy Effort in the Growth of Interests.

VI.—The Progressive Examination of Things by the Child—First, "General" Impressions, and, later, Full and Concrete ones—The Minds that "stick" at General Impressions—What Education can do to take the Young Mind beyond these—Methodical Analysis of Presentations and its Difficulties—Error of plunging Child into the Abstractions of "Qualities" and "Relations"—Illustrations from the Teaching of Form and of Drawing.

VII.—The Relation of Observation to Assimilation of Sense-Presentations—Interest in Objects includes Impulse to Assimilate—The Lower Kind of Animal Assimilation; Recognition—Assimilation as Expansive, and as Mastering the New through its relation to the Old—True and False Conception of Apperception—The Apperceptive Attitude and its relation to the Store of Impressions—The Aim of Object Teaching as the Development of right Apperceptive Attitudes.

VIII.—The Way in which the Inner Store of Ideas grows into an ordered Multiplicity—Observation and Memory—The Child who Sees and Forgets—Associative Grouping of Ideas—Apperceptive Systems as the Beginning of Organized Knowledge—Types of Associative Grouping: the Mind for Particulars and Details, and the Mind for Generalities and Relations—The Exercise of the Memory as Training in Exactness—Errors of Childish Reproduction, Single and Recurring, and the way to deal with them.

IX.—The Psychology of Language as affecting Processes of Instruction—General Function of Names and of Articulated Language in the Growth of Intelligence—The Seer and the Namer of Things—Language as fixing the Results of Methodical Observation—The Need of Language in carrying out an orderly Arrangement of Ideas—The Teacher's Problem of selecting Fitting Language, and of insisting on its Accurate Reproduction—Language as a Fetish and as an Object of Contempt in Teaching.

X.—(2) Secondary Presentation of Intellectual Material through the medium of Language—The Aim and Process of Verbal Instruction, pure and simple—Words as Abstract Symbols, and as contributing to the Formation of Images—The Apperceptive Process in following Verbal Instruction—The Teacher must excite the Learner at once to a Reproduction of Ideas and to a further Elaboration of these—Different ways in which a Child's Mind may go wrong here—How a Child thinks of the Desert—How the Skilled Teacher keeps in touch with the Imaginative Movement of his Pupils' Minds.

XI.—The Name as Instrument of Thought—Transition from Image to General Idea—How a Child represents a Class of Things and their Qualities and Relations—The Problem of Thought-Training—The Child to rise above the Particular and yet to hold fast to Particulars—The Value of Judicious Presentation of Examples—When and how Definitions are to be reached.

XII.—Thought as an Articulated setting forth of Relations—Comparison of Primitive and Cultured Forms of Language—Growth-up Language as the Child's Burden—Meaning of the Rule "From the Indefinite to the Definite"—Early Exercises in Reasoning—The Stimulation and Restraint of Thought—How to deal with the Backward and the too Forward Reasoner.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

\* \* \* The Lectures will be delivered on THURSDAY EVENINGS at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

# THE CONCISE ENGLISH DICTIONARY.

BY

**CHARLES ANNANDALE, M.A., LL.D.,**

Editor of the "Imperial Dictionary."

New Edition, containing over 100,000 Entries.

Fcap. 4to, 864 pages, cloth, **3s. 6d.**

Also, in half-persian, **5s. 6d.**; half-morocco, **7s. 6d.**

**ANNANDALE'S CONCISE DICTIONARY** has, since its first publication, held a **pre-eminent place among One-Volume English Dictionaries**. It is now issued, in an extended form, at so low a price as to bring it within the reach of everybody.

The **CONCISE DICTIONARY** contains **more printed matter** than any Dictionary of similar price.

A computation shows that the matter in this Dictionary comprises **1,755,000 words**, while that in a rival Dictionary is only 1,000,000 words.

The **General Vocabulary** is very ample. All important **modern terms** pertaining to **Science, Technology**, and the **Arts** are clearly and accurately explained.

The **Definitions** and **Explanations** are exceptionally full and detailed, giving so much information that this Dictionary may justly claim the character of a **Concise Cyclopædia**.

The **Etymology** shows results obtained by the most recent investigators and the **correct pronunciation** of the words is given on an exceedingly simple system.

The Appendices comprise full **Pronouncing Lists** of—

Greek, Latin, Scriptural, and other Ancient Names.

Modern Geographical Names.

Modern Biographical Names.

ALSO:

Key to noted Names in Fiction, Mythology, &c.

Alphabetical List of prominent English Writers, with Dates of Birth and Death.

Words, Phrases, and Noteworthy Sayings, from the Latin, Greek, and Modern Languages, met with in Current English.

Abbreviations and Contractions used in Writing and Printing.

Forms of Address in Ceremonious Communications with Persons of Title and Official Position.

Principal Moneys of the World, and their Equivalents in English Currency.

## SOME OPINIONS OF THE PRESS.

"We can heartily recommend this neat and handy volume to all who want a copious and trustworthy English Dictionary of reasonable dimensions."—*Athenæum*.

"Stands towards other dictionaries of the smaller character in the relation of the 'Imperial' to rival lexicons—in other words, it holds the 'premier' place."—*Spectator*.

"The Concise Dictionary' stands first—and by a long interval—among all the one-volume English Dictionaries."—*Academy*.

"In clearness of type, in size, shape, and arrangement, the volume leaves nothing to be desired. Till Dr. Murray's great work is completed, it is not likely to be superseded."—*Journal of Education*.

COLLEGE OF PRECEPTORS' EXAMINATIONS, JULY AND DECEMBER, 1900.

## THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

*Athenæum*.—"The Pitt Press Shakespeare can stand in competition with any of the numerous editions of the sort now showered upon reviewers."

*School World*.—"It would be difficult to praise this series too highly."

*Guardian*.—"Mr. Verity is an almost ideal editor of school texts."

**As You Like It.** 1s. 6d. With Introduction, Notes, Glossary, and Index, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge.

*Guardian*.—"Mr. Verity, the editor, has provided material for all sorts of students. For the beginner we have the notes and a reprint of Charles Lamb's outline of the story. For older readers we have copious extracts from Lodge's 'Rosalynde.' For the examinee, the etymologist, and the curious student, we have the glossary, the index of the important words and phrases, and the notes on metre and on the date and sources of the play. All of these aids evince patient research, accurate scholarship, and thoughtful judgment."

## CAMBRIDGE MILTON FOR SCHOOLS.

*Guardian*.—"This edition will, we feel sure, long continue to be the standard school text of 'Paradise Lost.'"

**Paradise Lost, Books III. and IV.** Edited, with Introduction and Notes, by A. W. VERITY, M.A. 2s.

## PITT PRESS SERIES.

AUTHOR.	WORK.	EDITOR.	PRICE.
Macaulay	Lays of Ancient Rome (with Ivory and The Armada)	J. H. Flather	s. d. 1 6
<i>School World</i> .—"In thorough keeping with the other volumes of this series, an evidence of patient labour, and no mean tribute to Macaulay himself. . . . The notes are brief and pointed, and two useful maps are appended. The introduction is brief, but exceedingly well done."			
Scott	Marmion	J. H. B. Masterman	2 6
<i>Guardian</i> .—"Far and away the best school edition of the poem we have seen; and it will be difficult, probably impossible, to improve on it."			
Scott	Lay of the Last Minstrel	J. H. Flather	2 0
<i>Guardian</i> .—"It is one of the very best edited school-texts ever placed before the public."			
Caesar	De Bello Gallico, Books IV.-V. (Subject, Book V.)	A. G. Peskett	1 6
"	De Bello Gallico, Book VI.	"	1 6
Cicero	De Senectute	J. S. Reid	3 6
Horace	Odes, Book III.	J. Gow	2 0
Livy	Book XXII.	M. S. Dimsdale	2 6
Vergil	Aeneid, Books VI. and XII.	A. Sidgwick	each 1 6
Euripides	Medea	C. E. S. Headlam	2 6
Lucian	Menippus and Timon	E. C. Mackie	3 6
Xenophon	Anabasis, Books III. and V.	A. Pretor	each 2 0

## CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

*School Guardian*.—"Exact and scholarly, and at the same time simple, text-books. The University Press are to be congratulated upon having secured as editors such eminent scholars; their names are a guarantee of their work. These text-books will find their way into numberless preparatory schools and lower forms of public schools; they deal so thoroughly and clearly with the subject in each case that nothing better could be desired by master or pupil. Among others, there is this immense advantage: each volume is its own note-book and dictionary; the student, however elementary his knowledge, needs only the book in hand and a simple grammar."

The following editions have COMPLETE VOCABULARIES.

AUTHOR.	WORK.	EDITOR.	PRICE.
Caesar	De Bello Gallico, Books V. and VI.	E. S. Shuckburgh	each 1 6
Vergil	Aeneid, Books VI. and XII.	A. Sidgwick	1 6
Xenophon	Anabasis, Books III. and V.	G. M. Edwards	1 6

\*.\* Cambridge Editions of Caesar, Vergil, and Xenophon.—The attention of Schoolmasters is called to the fact that there are now two editions of some of the works of these authors in the Pitt Press Series and the Cambridge Series for Schools and Training Colleges. The Editions in the Cambridge Series for Schools and Training Colleges have Complete Vocabulary. If, in ordering, the Edition required is not specified, the Pitt Press Edition, without vocabulary, will be sent.

## ENGLISH GRAMMAR.

New and Enlarged Edition (Thirty-sixth to Forty-fifth Thousand).

**The Elements of English Grammar.** By A. S. WEST, M.A., Trinity College, Cambridge. Fcap. 8vo, 2s. 6d.

*Prefatory Note to the Enlarged Edition*.—Some hundreds of additional Questions and Examples are given in the present edition, and in a few places the wording of the text has been altered. The numbers of the paragraphs remain the same.

*School World*.—"The larger work shows a master hand. It is adapted to the higher forms, and its historical survey contains just what is wanted for examination purposes. . . . Both books deserve a large sale."

**An English Grammar for Beginners.** By A. S. WEST, M.A. 1s.

*School World*.—"The smaller of these two works ought to be extensively used for the teaching of junior forms. Its matter is arranged with the greatest care, its explanations are full and easily adapted to juvenile intelligences. . . . Altogether the book is worthy of high commendation."

## CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

General Editor—W. H. WOODWARD, of Christ Church, Oxford, Principal of University (Day) Training College, Liverpool, and Lecturer on Education in Victoria University.

*Specially suited for Candidates for Queen's Scholarship Examinations, December, 1900, and Certificate Examinations, July, 1900.*

**A Short History of the Expansion of the British Empire, 1500-1870.** By WILLIAM H. WOODWARD. With Maps. Crown 8vo, cloth, 4s.; cloth extra, gilt top, 5s.

*Athenæum*.—"Thoroughly to be recommended."

*Educational Times*.—"Mr. Woodward tells this story in *usum scholarum* in an altogether admirable manner."

*School World*.—"It is full of wisdom applicable to our own day."

**The Making of Character:** some Educational Aspects of Ethics. By JOHN MACCUNN, Balliol College, Oxford; Professor of Philosophy in University College, Liverpool. Crown 8vo, 2s. 6d. [Ready April 2.]

**The Education of the Young, from the "Republic" of Plato.** Being Book II., Ch. IX. to end of Book IV. Translated into English, with Explanatory Notes and Introduction, by B. BOBANQUET, formerly Fellow of University College, Oxford. [Nearly ready.]

## NEARLY READY. NEW WORK BY SIR JOSHUA FITCH.

**Educational Aims and Methods.** Lectures and Addresses by Sir JOSHUA FITCH, M.A., LL.D., late Her Majesty's Inspector of Training Colleges, and author of "Lectures on Teaching." "The Arnolds and their Influence on English Education." [In the press.]

The forthcoming volume consists of lectures and addresses given in Cambridge, or before the Teachers' Guild and other bodies of teachers in England and in America. Its general aim is to direct attention to various aspects of educational theory and of practical work; and it includes several monographs on the lives of distinguished and representative teachers.

**Geometrical Drawing.** With Notes and Examples. Part I. Plane and Elementary Solid. By W. H. BLYTHE, M.A., Jesus College. 2s. 6d.

*Extract from Preface*.—"This book is intended for Candidates reading Geometrical Drawing for the Science and Art Department, South Kensington, Elementary Stage, for entrance to Sandhurst and Woolwich, and for the Cambridge Preliminary and Junior Local Examinations."

"Part I. contains Plane Geometrical Drawing and Solid Geometry so far as it is included in the Syllabus, Geometrical Drawing (Art), Subject 1 A, page 231, 'Science and Art Directory,' 1899."

*Teachers' Aid*.—"We can recommend the book with every confidence, as we feel certain that its adoption will yield encouraging results."

**Geometry for Young Beginners.** An Introduction to Theoretical and Practical Geometry. By F. W. SANDERSON, Headmaster of Oundle School. 1s. 4d.

*Teachers' Monthly* (Birmingham).—"We are delighted with this book."

*Morning Post*.—"The work will commend itself to teachers and students."

## PITT PRESS SERIES.—New Volumes.

**Hanf.—Der Scheik von Alexandria und seine Sklaven.** Edited, with Notes and Vocabulary, by W. RIPPMANN, M.A., Professor of German at Queen's College, London. 2s. 6d.

**Cicero.—Pro lege Manilia.** Edited, with Introduction and Notes, by J. C. NICOL, M.A., Trinity Hall, Master of Portsmouth Grammar School. 1s. 6d.

*Glasgow Herald*.—"A very scholarly piece of work."

The Educational Times.

The Education Minister.

THE Board of Education has been constituted for exactly a month past, though it is only to-day that its powers have come into operation.

The Duke of Devonshire was nominated on March 3 as President of the Board, and, by virtue of the Act, the Board was established on the same day. Our readers are sufficiently familiar with the provisions of the measure whereby England has now, for the first time in her history, a Minister in the Cabinet responsible for the whole domain of education from the kindergarten to the University. We shall not have long to wait for the initial exercise of the authority of the Board. The details of its organization are not before us as we write, but they may be published at any moment. The conditions under which the President of the Board and his permanent Secretaries will henceforth control our elementary, secondary, technical, and higher education will, in many respects, be practically the same as those which have existed under the old régime. In other respects they will be entirely new, being created for new purposes. What secondary teachers will now be most anxious to see is the nomination of the Consultative Committee, which, we must hope, will be as far as possible representative of all the interests of education, even if it does not follow the constitution set forth in the last Government Registration Bill. One of its chief and earliest duties will be to create a Register, and there are a dozen good reasons why this task should be taken in hand without delay. As the Dean of the College said at the last Distribution of Prizes, the Act is one for which public opinion was thoroughly ripe, and which, if carried out with wisdom and discretion, will produce a very marked improvement in education.

Our first Minister of Education enters on his duties as President of the Education Board with the good will and confidence of all. The Duke of Devonshire has been associated with education in its various aspects for many years past—as Lord President of the Council, as Chairman of the Association for Promoting Technical and Secondary Education, and as Chancellor of the University of Cambridge. He has shown at all times the tact, the comprehension, the foresight, the combination of enterprise and caution, which are pre-eminently necessary in dealing with a subject so complicated and all-

important as that of public education. On him, to a great extent, will depend the shaping of the course which the Education Board is to take in the coming years, especially in regard to secondary education. It is true that he is only the political and temporary head of the Department; but, in any case, it seems probable that there are years of useful work before him as President of the Board. They will be years of no little difficulty and suspense, for the lines on which the new organization is to be conducted have not yet secured the final and unanimous assent of those who are entitled to be heard on the matter. The Duke of Devonshire has a great opportunity and a great responsibility. There is ground for the hope that he will not disappoint us.

Assistant-Masters.

THE deputations from the London County Council and School Board to the Charity Commissioners, to suggest some reformation in the conditions upon which assistant-masters in secondary schools hold their posts, could not have expected to serve any immediate purpose. Mr. Alderson, the Chief Commissioner, recognizing the moribund condition of his educational jurisdiction, contented himself with expressing his sympathy with anything that would improve the position of assistant-masters as regards tenure, salary, and pension. As the grievances of assistant-masters found a place in the *nunc dimittis* of the Charity Commission on its educational side, we may perhaps hope that the matter will not be lost sight of by the Board of Education.

It must, however, be borne in mind that the powers of the Board in this direction are in no wise more extensive than those possessed by the Charity Commissioners. They are merely transferred to the Board of Education, and any amelioration in the lot of assistant-masters in endowed schools, if recourse is not to be had to fresh legislation, must be brought about by changes in the schemes of such schools. When the Endowed Schools Acts were passed the importance of providing reasonable security of tenure and advancement for assistant-masters was not appreciated, and consequently there is no express provision with that object in the Acts. Under their general powers to frame and regulate schemes the Commissioners might, however, have introduced such provisions. The lack of initiative and power to grasp the educational needs of the age which the Commissioners have too often shown fully accounts for this

omission, and they depart from the educational stage perhaps less regretted by the assistant-masters of the endowed schools than by any other educational section.

While upon this subject it may be well to point out that the separate alteration of school schemes, which is now the only method by which through existing agencies a change can be brought about, is clearly out of the question. Fresh legislation will be necessary, and an early deputation to the Board of Education suggesting that the Board should frame a Bill, after reference to the Consultative Committee, embodying the views of the profession as to the status and conditions of tenure of assistant-masters, might probably lead to some result. It may be said that the formation of the Register should precede such a measure. But the matters at issue are definite and urgent; and a Bill promoted by the Board would mean business, while the introduction of a private members' Bill, as has been suggested, would not.

### NOTES.

THANKS to the consideration which it has shown to the representatives of the Headmasters' and the Assistant-Masters' Associations in matters of school curriculum, the Central Welsh Board for Intermediate Education has been able to combine elasticity with firmness in its work in relation to the county schools. Owing to the larger area of the country, and other considerations, it might be difficult in any scheme of secondary education for England to work such a body as the Central Welsh Board; but, so far as Wales is concerned, educationalists who know the system intimately are of opinion that it has been remarkably successful. The aim of the Board has been throughout not to crush the individuality and originality of the teacher, but to guide their development on the most fruitful lines. The county schools are already making their influence felt in many districts on the life of the country, and a noticeable feature of the scholarship lists at the University Colleges of recent years has been the high places obtained by pupils from these schools. Generally speaking, the educational system in connexion with the Welsh University and the county schools seems full of promise.

THE TOWN Council of Hamburg has endorsed the proposal to combine the various institutions of the city in a single organization of University rank. Hamburg has a fine ethnological museum, a museum of antiquities, a museum of arts, an observatory, a chemical and a physical State laboratory, an institution for natural history, a botanical institute, and a public library. With respect to medical science, there are a number of good hospitals, of which the new State Hospital at Eppendorf is one of the best equipped on the Continent. The Institution for Tropical Diseases established by the Imperial Government will be in connexion with the hospitals of Hamburg. As a first step in the direction of University organization the Senate of Hamburg recently submitted a scheme to the representative assembly of the city providing that the heads of the above institutions, together with a staff of lecturers, should form the "teaching body" of Hamburg, and elect a rector. The number of lectures will be augmented, and it is hoped that the combination of the various institutions may lead in course of time to the formation of a fully equipped University. We see it

stated in a German paper that the Kaiser has expressed a personal interest in the proposal.

EARL FORTESCUE, whom we quote merely as a veteran in education, recently wrote a letter to the *Times* which, to say the least of it, did not support the claim for further State aid towards the training of elementary teachers. Concluding his letter, Lord Fortescue says:

I have examined the report of the Education Department for 1899, presented since last July, and I find that the average cost of each student in the male training colleges was £62. 7s. 5d. for the year ended June 30, 1898. At Hammersmith, the highest, it was £69. 4s. 9d.; at Chester, the lowest, it was £51. 18s. 11d.; and the cost of tuition in those sixteen boarding colleges was £3,470. 7s. 3d., and of keep £37,524. 12s. 10d. . . . I would suggest that, as the contribution of the State towards the training of elementary schoolmasters seems to be needlessly large, it ought either to be diminished for the relief of the taxpayer, or a larger number ought to be trained for the money, which I venture to think practicable without any sacrifice of efficiency. It should never be forgotten that these students are almost wholly drawn from the wage class, and are trained at very small cost to their parents for an honourable and, on the whole, increasingly remunerated profession.

"The wage class" is good. So are Lord Fortescue's intentions. So, no doubt, are the intentions of those who ask the Government not so much for fresh money as for a more comprehensive provision for the training of teachers without invidious distinctions.

A HOLIDAY course held at Oxford last year mainly, but not exclusively, with a view to the needs of foreign students, proved to be such a successful experiment that it will be repeated this summer. The object is to provide foreign students with practical help in the study of English language and literature. Courses of lectures in modern poets and prose writers have already been arranged, and small classes will be formed for practice in letter-writing, composition, and pronunciation. In response to a request from teachers of English in foreign schools, English institutions and social customs will also be dealt with, and the following are among the chosen subjects:—Political parties, etiquette, Parliamentary procedure, trial by jury—this last to be illustrated by a costume representation. St. Hugh's Hall has been secured as a vacation school for July, August, and September. Here it is hoped that "all will enjoy the advantage of college life while conforming to the best traditions of an English home," and the association of English and foreign students under such circumstances is not the least among the attractions offered. The arrangements have the approval of Mr. Arthur Sidgwick, Mr. Michael Sadler, Miss Maitland, Principal of Somerville College, and Miss Rogers, tutor in classics to the Association for the Education of Women, and there are other well known Oxford names on the list. Mr. Sidgwick has promised to lecture on "Mrs. Browning," and Miss Maitland on "The Education of Women in the Reign of Victoria."

SINCE we dealt last month with the question of rural education the Elementary Code for 1900 has appeared, and its new provisions go far towards creating the conditions which we regarded as necessary. It is a good augury of what the Board of Education will be able to do when it sets to work. No doubt the block-grant system of judging and paying for the work done in all subjects, on the aggregate rather than in-

dividually, is to be welcomed from the point of view of the rural teachers. The more "urban subjects" have hitherto been found most effective for the purpose of grant earning. Again, the kind of teaching is to be determined by the requirements of each district and the needs of the scholars. There is henceforth no reason why rural economy should not become part of the general education of all village children. Opportunities of giving object lessons have been afforded in all standards, and here again "Nature knowledge" should do much towards the end in view. The question of actual work on the land may well be left to a process of gradual development; and here it may be pointed out that a special grant is still obtainable for teaching a number of subjects, among which are gardening and manual instruction, which latter has been taken to include the former in times gone by. The importance of a special training of the girls who are to be the housewives of the next generation has been further recognized. Altogether the Code is decidedly encouraging for those who have laid stress on the value of rural education. Opinions differ as to its probable effect on elementary education in general; but we are not surprised to see that bodies like the Agricultural Education Committee have welcomed it "with the greatest satisfaction."

THIS month brings round the hundredth anniversary of the poet Cowper's death. "John Gilpin" is still very much alive; but, we think, there are not many in this generation who claim acquaintance with Cowper's "Tirocinium: or a Review of the Schools." Its condemnation of the low tone and rude manners of the schoolboys of his day is expressed in such extreme terms that it might be thought to be due as much to his sensitive and retiring nature as to the actual hardships and persecution endured by him at the hands of his schoolfellows at Westminster. Cowper's criticism was, however, justifiable. In an article on "Public Schools," which appeared in the *Edinburgh Review* only some ten years after the poet's death, Sydney Smith denounces the bullying tyranny and accompanying slavery prevalent in the public schools in stronger language even than Cowper's. Sydney Smith could only suggest as a remedy the establishment of small schools so as to permit more effective supervision. The evil has, fortunately, almost entirely disappeared, and, instead of a "Tirocinium," we have the school magazine. The conservative instincts of schoolboys have, at last, succumbed to the civilizing spirit of the century.

In the review to which we have just referred, Sydney Smith maintains that the most eminent Englishmen in every art and science had not been educated in public schools. As he was a Winchester boy himself, the admission is all the more remarkable, and he attempted to prove his case by a formidable list of poets, philosophers, lawyers, men of science, warriors, statesmen, and divines who were never at a public school. It would be interesting if a similar list were made of the distinguished men of the Victorian period. As to science and mathematics the contention is still largely true, but certainly not as to statesmen, warriors, and men of letters.

THE announcement that the Chicago Board of Education have decided to omit histories of England from the literature used in

the public schools, on the ground that they are biased in favour of England, opens out a vista of charming possibilities to the American schoolboy. He doubtless, by this time, has suggested that Spanish histories should receive similar treatment. The strong local equation in American politics may lead to strange results. While English history is anathema in Chicago, Boston may refuse to countenance any educational recognition of the growth of Russia's uncultured despotism, and the development of modern Germany may be treated as non-existent on the Western slope. One of the trustees of the Chicago schools, we are told, is President of the Ancient Order of Hibernians. We thought so. We may take courage, nevertheless, because the still small voice of the Report of the American Historical Association, recently issued, speaks thus:—"The pupils in our schools can ill afford to lose such an introduction to the study of the history and institutions of the United States; for without a knowledge of how the English people developed and English principles matured they can have slight appreciation of what America means." There is, perhaps, a municipal election pending in Chicago.

## SUMMARY.

### THE MONTH.

ON March 16 Lord Balfour introduced in the House of Lords an amending Education Bill for Scotland. This measure is mainly concerned with higher education, its chief purpose being to organize the administration of various funds, and to establish Local Authorities for secondary and higher education. Lord Balfour said that the Act of 1872, dealing mainly with elementary education, had various clauses touching higher schools and higher education, putting such under local School Boards, with provision for their maintenance out of rates and ancient endowments. On the whole the power of the School Boards had been well and wisely exercised, but there had in some quarters been a tendency to grudge expenditure, and higher schools were at a disadvantage in not receiving assistance from Imperial funds.

The Government hoped the authority they set up would rule over a wider area than the parish or the burgh, and would be enabled to harmonize and to provide the means whereby every child, either by means of higher schools, higher departments, or, in the event of these two methods failing, by means of bursaries, would be brought within the reach of higher schools, if he or she would profit by it. They proposed to take as their unit of administration the county and some of the larger boroughs, and one parish of Govan, which at present had a Higher Education Committee of its own. He regretted that it had not been found possible to lay down in the Bill the precise conditions of the constitution of these Higher Committees. They proposed to do that by a scheme to be subsequently approved by Parliament. The reason for that was this: that the circumstances of the counties and towns differed so widely. They intended that there should be on the Higher Education Committees a considerable representation of the municipal element, whether County Council or Town Council; that those School Boards which gave higher education should also be represented, and that there should be a small admixture of gentlemen chosen for their interest in education and on account of their possessing the confidence of the locality.

WITH respect to professional representation and the assistance of educational experts, Lord Balfour went on to say—

A Consultative Committee had been established for Wales, and one would shortly be established for England. Scotland and England, however, were hardly parallel in this matter. Scotland had much less to do in the matter of the organization of its system of higher education than was the case in England. Secondary education had for a long time been part of the national system of education in Scotland, and he found no difficulty in ascertaining Scottish opinion. But on matters of administration large towns such as Edinburgh and Glasgow differed materially from one another, and there were different problems affecting Highland and Lowland counties and urban and rural districts. He proposed, therefore, to rely mainly for advice and assistance upon the County Committees. He believed they would form the best Consultative Committees for the Vice-President of the Scotch Educational Department. They would exist all over Scotland, and would know the

needs of their own particular district, and he should look with considerable jealousy on the establishment of any Committee which would tend to come between the Vice-President of the Council and the Local Authorities who were doing the local work of education. On the other hand, he did not regard this as a matter of principle. He was open to argument and conviction on the subject, and if there was a more general desire for a Consultative Committee in Scotland than he believed there was he would be willing to revise his opinion.

A MOTION virtually in favour of establishing a Roman Catholic University in Ireland out of national funds was made in the House of Commons on March 23, and defeated by a majority of eighty-six. Neither the Ministerialists nor the Opposition were unanimous on the subject. Fourteen Liberals and fourteen Unionists voted with the Nationalists. Sir H. Campbell-Bannerman, Sir W. Harcourt, Sir H. Fowler, and other Liberals took no part in the division; but included in the minority of ninety-three were Mr. John Morley, Sir E. Grey, Mr. Asquith, Sir Robert Reid, Mr. Haldane, and Mr. Birrell. The Unionists accompanying them included Mr. Courtney, Sir W. Anson, Mr. Jebb, Mr. Malcolm, Mr. Monk, Mr. H. Foster, Mr. Yerburgh, and Sir Barrington Simeon. The majority of 179 was composed almost entirely of Ministerialists. Mr. Balfour—whose speech warmly supported the motion—being among the number.

ON March 23, in the House of Lords, Lord Reay congratulated the Education Department on the new Code, which completes what is known as the "block system" of grants to elementary schools, and at the same time gives credit for several new subjects in the rural schools. Lord Reay assumed that one object of the Committee of Council had been to bring the English Code more in harmony with the Scotch Code. Having assimilated the Code to some extent, it would have been wiser to have put in it all the guarantees which the Scotch Code gave. One of the things he feared was that the increased powers given to the inspectors would lead to friction between the inspectors and managers. He also feared that there would be a diminution of the earning powers of the urban schools. The Duke of Devonshire replied:—

The cases of England and Scotland were very far from being analogous, because Scotland had authority to introduce secondary education, whereas the School Boards in this country had no such power. The Government had, however, under consideration a measure which they considered necessary to constitute the authority which should give to localities the power to afford secondary education. When that time came they might be in a position to make some further advances towards assimilating English and Scotch Codes. The proposed additional powers to inspectors would be subject, if necessary, to appeal to the Education Department.

THE Civil Service Estimates provide, as usual, for the distribution of the Parliamentary grants to the Universities and University colleges. Wales, as our readers are aware, is favourably treated in respect of these annual subventions. The grant to the University of Wales is to remain at £4,000, as compared with £2,000 granted to the Victoria University and £42,000 to the Scottish Universities. The grants in aid of University colleges amount to £37,000, of which £25,000 goes to English colleges and £12,000 to Welsh, divided into equal parts for Aberystwyth, Bangor, and Cardiff. In addition to this, a grant of £20,500 is to be made in respect of Welsh intermediate schools—£500 towards the cost of inspection and examination, and the remainder in the form of grants in aid to the various counties to meet an equal sum raised in each case by a county rate of  $\frac{1}{2}$ d. in the £. Out of a total estimated sum of £105,700 to be expended on Universities, University colleges, and intermediate schools, Wales gets £36,500, or a little over a third. The following are the amounts estimated to be due in respect of intermediate schools in each county and county borough in the Principality:—Anglesey, £259. 11s. 8d.; Brecon, £577. 8s.; Cardigan, £610; Carmarthen, £1,322. 2s. 10d.; Carnarvon, £1,250; Denbigh, £1,228. 1s. 1d.; Flint, £925. 1s. 11d.; Glamorgan, £5,608. 8s. 6d.; Merioneth, £569. 6s. 7d.; Monmouth, £2,049. 4s. 9d.; Montgomery, £759. 12s. 8d.; Pembroke, £883; Radnor, £358. 13s. 10d.; Cardiff, £2,029. 8s. 11d.; Newport, £690; Swansea, £650.

IN answer to a question in the House of Commons, the Irish Attorney-General said that the National Education Board had received a letter from the Gaelic League, urging the desirability of conserving the Irish language in the schools in the interests of

the poor people of Ireland, as is now done with the Welsh language in Wales, with the approval of the Committee of Council on Education for Great Britain. The matter is now under the consideration of the Commissioners, who are the proper authorities to deal with it in connexion with the revision of the school programme shortly to be carried out.

THE Cambridge Teachers' Training Syndicate, in their annual report for 1899, state that during the year lectures on the Theory, History, and Practice of Education have been delivered by Mr. S. S. Fletcher, of King's College. Two examinations have been held, in June and December. The June examination was held at seven centres—London, Cambridge, Cheltenham, Liverpool, Edinburgh, Aberystwyth, and Waterford—when 117 candidates presented themselves for examination, of whom 6 were placed in the first class, 81 in the second, 16 in the third, and 14 failed to satisfy the examiners. The December examination was held at London, Cambridge, Cheltenham, and Exeter, when 57 candidates presented themselves for examination, of whom four were placed in the first class, 32 in the second, 16 in the third, and 5 failed to satisfy the examiners. This makes a total of 174 candidates examined this year, as against 145 examined in 1898 and 154 in 1897. It is the largest number the Syndicate has ever examined.

THE report of the Committee of the Cambridge University Day Training College for the academical year 1898-99 has been published. In June, 1899, the college consisted of twenty-four students—seven in the third year, eleven in the second year, and six in the first year. The professional education of the students has been given by the Principal, Mr. Browning, of King's College, Masters of Method, Mr. S. S. Fletcher, of King's College, and Mr. Iliffe, of St. John's College, and by Mr. Jenkyn Jones, of Caius College. The instruction in music has been given partly gratuitously by Mr. Sedley Taylor, of Trinity College, and, partly, at Mr. Taylor's expense, by Mr. Field Hyde. Of the present students, eleven hold scholarships given by the Drapers' Company, and two hold scholarships given by the Clothworkers' Company, and one an exhibition given by the Leathersellers' Company. One is a sub-sizar of Trinity College, one holds a choral scholarship at King's College, and one a choral scholarship at Jesus College; one holds a sizarship at St. John's College, and three hold exhibitions at Emmanuel College. The Committee desire to express their gratitude to King's, St. John's, and Emmanuel Colleges for these exhibitions and those which they have offered for the ensuing year; they are still of opinion that the progress of the college must depend upon assistance of this nature being continued and extended.

ON March 9 Miss Sara A. Burstall, B.A., formerly scholar of Girton College, Cambridge, now Headmistress of the Manchester High School for Girls, gave an address to the female students of the Mason University College on "The Position of Women in the New University." Prof. Burstall presided. Miss Burstall said that she felt profoundly convinced of the excellence of such a solution as had been achieved in Birmingham by the co-educational college and the impartial University. The great movement which had given women the opportunity of sharing in the studies and culture which strengthened and stimulated, refined and consoled, was now fifty years old. The first result was the recognition of the right of women to education and degrees. That was so much a commonplace now that there had been no question in the new University of Birmingham as to whether women were to have degrees or not. It was taken for granted. Women in the new University, in all but one—and that a technical—faculty, were on absolute equality with men. She was particularly gratified to know that women were eligible, not only to study and obtain degrees, but also to any and every office connected with the government of the University.

ON March 15 a deputation from the London School Board was received by Mr. G. H. Alderson, Chief Commissioner of the Charity Commission, to hear certain suggestions as to the schemes applying to secondary or technical schools. Mr. Whiteley introduced the subject by explaining that the School Board for London were of opinion that it would be a very useful provision in all future schemes, or alterations of schemes, for secondary or technical schools that, wherever a headmaster called upon an assistant-master to resign, there should be an appeal from the headmaster's decision to the governing body of the school. The deputation had also been asked to urge upon the

Commissioners the desirability of a provision being inserted in the scheme for these schools, providing for the appointment of an independent auditor, who would be able to examine the valuable deeds of endowed schools periodically, and to check the accounts. Mr. Alderson, in reply, said there appeared no objection to the appointment of an independent auditor, provided he had no power to surcharge; and, as to the further question of the dismissal of assistant-masters, the Commissioners had distinct sympathy with anything which would tend to improve their condition. As, however, the powers of the Commissioners in this matter were about to be transferred to the Board of Education, he must refrain from saying anything which would prejudice the question before it had been considered by the new Department to which it would be referred. The Commissioners also received a deputation of a similar character from the London County Council.

IN their annual report for the past year, the Poor Schools Relief Committee of the London Diocesan Board of Education state that the operation of the Voluntary Schools Act during the past three years has made it abundantly clear (1) that the special aid grant does little more than meet the permanently increased expenditure which is demanded, an expenditure which, in many cases, is even out of proportion to the amount of aid grant allotted; and (2) that, whilst in past years "the intolerable strain" served as a stimulus, so that the Committee were able to boast that not only were existing Church schools preserved, but fresh accommodation was continually being provided, the Act of 1897 seems, for the time, to have had an enervating influence upon many who expected much more from it than it has effected, or, indeed, was designed to effect. If, therefore, the schools are, through the operation of the Act, better equipped, staffed, and salaried than in the past, they will, the Committee say, nevertheless, still feel severely the financial strain, unless the flow of voluntary contributions be liberally maintained. Upwards of £22,000 is being raised and expended upon the rebuilding and enlargement of two Church schools in the East end of London. In another part of the diocese the important schools of St. Paul, Hammersmith, have recently been rebuilt, all of which "shows the keen interest which is being taken in Church schools in the poorest districts, and ought to serve as a stimulus to the more well-to-do parts of the diocese." It has been determined by the Committee to revert to the plan of inviting a special "Church Schools Sunday" appeal throughout the diocese, and Sunday, July 15, has been chosen for the purpose.

A PARLIAMENTARY return gives particulars with respect to the evening continuation schools inspected for the year ended April 30, 1899. It appears that the number of schools inspected was 5,908, the number of scholars on the books was 474,563, the grants paid by the Education Department amounted to £184,271, and the total income of the schools for the year amounted to £371,768, of which the sum of £123,031 was derived from School Board rates.

THE Committee of the City and Guilds Institute have decided that in counties and county boroughs possessing an organization for the promotion of secondary education, recognized by the Science and Art Department, such organization may, on application through the Secretary of the Technical Instruction Committee, or otherwise, be held responsible, under certain conditions, for the conduct of the Institute's examinations, and for the establishment of new classes in technology, in accordance with Clause VII. of the "Science and Art Directory." The Committee will, however, continue to require, as a condition for the registration of a class in any technological subject, the approval by the Institute of the qualifications of the teacher proposed to be appointed.

ON March 13 Dr. G. E. Shuttlesworth read a paper before the Childhood Society, the Rev. T. W. Sharpe in the chair, on "The Training of Defective Children under School Boards." Tracing the formation of special classes for the instruction of dull, backward, and defective children to Germany (where they had existed since 1863), the lecturer stated that at the present time probably no fewer than six thousand children were receiving special instruction within the limits of the German Empire:

In Scandinavian countries such instruction had existed for upwards of twenty years. In England, the Leicester School Board had actually opened the first special class in April, 1892; though the London School Board had formally approved the system in March, 1891, and started centres of instruction in the following year. The latter had now no

less than 2,125 children on the roll at upwards of fifty "special" centres scattered through the metropolis; and, in addition to London and Leicester, the School Boards of Birmingham, Bolton, Bradford, Brighton, Bristol, Burnley, Halifax, Nottingham, and Plymouth had established special classes, whilst Manchester, Liverpool, and Derby had determined to do so. The estimate of the Departmental Committee was that at least 1 per cent. of the elementary school population of the country would require such special provision, which would be facilitated by increased grants from the Education Department under the Act of 1899.

#### UNIVERSITIES.

(From our Correspondents.)

No review of the past term could mean much if it Oxford. left out of sight the weather. The Oxford climate is singularly enslaving, and, in its clumsy, inevitable way, can almost paralyse work if it pleases. This term it has pleased, and hence a certain inertia in University life.

Quite early in term there died one of our greatest men, Sir William Hunter, Curator of the Indian Institute. Probably the Indian Civil Service draws at present a greater preponderance of its recruits from Oxford than ever before. In the University life of such men Sir William Hunter played a notable part; his experience and his sympathy were every one's help. Of his own work, the administrative part, which first made him famous, is, of course, achieved; but his literary labours, which promised incalculable things, will now never be. The great "History of British India," whose first volume appeared in 1899, must remain a fragment.

Early in term (February 6) the preamble to the statute establishing D.Sc. and D.Litt. degrees was passed *nem. con.* Prof. Poulton, indeed, gave such circumstantial proof of the success of the B.Sc. that opposition was paralysed. On February 20 various amendments were thrown out, including a proposal that heads of houses and professors should receive these degrees *ex officio* and without examination. This proposal, which is not, however, such a mere case of "corrupt oligarchy" as it sounds, was crushed by the self-abnegating zeal of the President of Trinity and the Professor of International Law. Finally, on March 13, the statute was definitely approved. There can be little doubt that, in the case of the D.Sc., it is a real step gained, completing our excellent modern science course as sketched in my last letter. Whether the B.Litt. has been, or the D.Litt. will be, at all as valuable is by no means equally certain.

On February 20 the preamble was carried to yet another statute of distinctly parallel tendency, affecting the Law School. The proposal, backed by Sir William Anson and Prof. Dicey, is to allow graduates of other Universities to take our B.C.L. The idea is to collect the more advanced students of Law from America and the Colonies as well as from the United Kingdom, and build up at Oxford a great school for the most advanced study of law. The question then is: Will our present staff suffice? If the Professors are concentrated upon the B.C.L. School, will the non-professorial lecturers in law be able to cope alone with the Final School of Jurisprudence? One, of course, can only answer this by making a careful scrutiny of our *personnel*; most answers so given are in the affirmative.

The War Office has awoken to many things lately; and amongst them to the merits of the Universities as recruiting-grounds for officers. The Vice-Chancellors of Oxford and Cambridge have suddenly been authorized to dispose of no less than seventy-three commissions apiece. There is no lack of applicants, and choice is to be made from them according as they possess "good moral character" and "any academic distinctions." So, at least, the War Office has proposed; how an already over-worked Vice-Chancellor will dispose remains to be seen. In so far as the step, in itself an emergency step, indicates an official desire to base the Army more on the Universities than heretofore, it can only meet with our approval. In all, about two hundred and fifty Oxford men have gone to the front in various capacities. The list includes not a few prominent undergraduates.

The O.U.D.S., this term, acted "Twelfth Night." It is rapidly becoming confined to Shakespeare, which seems a pity, since it can then only do moderately what is better done elsewhere. Greek plays give an academic society far more chance of being interesting. Only scholarship is, unhappily, not the *forte* of the O.U.D.S.; and their last attempt at a Greek play, "The Knights," contained so little recognizable Greek that its memory still haunts them as an awful warning.

Music in Oxford has, for various reasons, been rather in the background during this term. Chief among these reasons is the lamentable illness of Mr. John Farmer, to whom, as an organizer,

if not as an organist. Oxford music owes very much. On March 7 Sir Hubert Parry, our new Professor of Music in succession to Sir John Stainer, delivered his inaugural lecture.

A new research scholarship, in Egyptology, has been started at Worcester College; and the first of "Laycock Scholars" accordingly is Mr. D. MacIver, of Queen's; a most auspicious beginning. Mr. C. H. Firth, M.A. Balliol College, has been elected Ford Lecturer in English History for the ensuing academical year. Sir William Markby, D.C.L. Balliol College, having resigned the Readership in Indian Law, is to be succeeded by Mr. E. J. Trevelyan, late Judge of the Calcutta High Court and late Vice-Chancellor of Calcutta University.

The Hall and Houghton Prizes show a great falling off in the study of Divinity in Oxford. Of the two senior prizes, neither was awarded; for the Junior Septuagint Prize there was not even a candidate. The Junior Greek Testament Prize was alone won, by Mr. P. B. Emmet, B.A. Magdalen College.

Oxford Evangelicalism will be greatly weakened by the appointment of Dr. Chavasse to the see of Liverpool. No one seems yet to prophesy confidently who will succeed him as Principal of Wycliffe Hall.

WHILE things Irish have been attracting the attention of the British public, the University has only followed the fashion in acquiring a valuable collection of Irish antiquities which formerly belonged to Mr. Murray, of Edenderry, King's County. The collection, which is probably worth about £600, was acquired for a quarter of that sum, and the whole of the purchase money was raised by Prof. Ridgway with the aid of the Antiquarian Society. Mr. Murray has stipulated that his name shall be attached to the collection, and that the sets of objects from separate graves or found otherwise associated shall never be broken up or divided.

Through the generosity of Mr. Richard Horton-Smith, Q.C., late Fellow of St. John's College, a prize has been offered to the University in memory of the donor's son Raymond Horton-Smith, M.A., M.B. of St. John's College; the prize is to be awarded to the candidate for the M.D. degree who during the academical year has presented the best thesis. Much valuable work is done by the members of our Medical School in this connexion, and the establishment of a prize will doubtless serve to perpetuate work of solid and permanent value.

The annual report of the examiners for poll degrees contains nothing very startling. The special examinations in Theology show 88 failures out of 277 candidates, which is somewhat abnormal; while the first part of the Law Special is responsible for 53 plucks out of 102 candidates—a result possibly due to the examiners as much as the candidates. When members of the Senate have the courage to *non-placet* personal graces we shall have made some progress towards the maintenance of uniformity of standard.

To oppose a personal grace is generally a somewhat invidious taste, but there are occasions on which the dictates of duty plainly point to such a course. On March 13 the *Reporter* gave notice of a grace for the appointment of a certain gentleman to fill the new office of Salomons Lecturer in Russian. Mr. E. G. Browne, who is closely associated with the training of Student Interpreters in Cambridge, at once gave notice of opposition on the ground that Cambridge men have of late years been habitually thrust aside in the making of all such appointments. The result of the voting must have been a surprise for the Council, as the grace was rejected by 61 to 19. It was once said by a well known head of a house that "imported professors think they should come in duty-free"—those days are happily over; but Cambridge men for Cambridge" will be a cry which will have a material effect on the determination of future appointments.

If the term came in like a lamb, it certainly went out like a lion as far as our social life was concerned. On the evening of "Lady-smith Day" the usual patriotic bonfire was duly lit in the Market Place; the undergraduates and townsmen alike were more zealous than discreet in their selection of appropriate material. Fire-wood was commandeered from various sources of supply, including the Corporation's bandstand on Christ's Piece. The result was that a few undergraduates and townsmen were duly arrested, and, in the morning, charged with "feloniously stealing, taking, and carrying away" the combustible materials in question. In hot haste the Mayor and his bench of local wiseacres, without intimating to the accused the serious character of the charge against them, accepted pleas of guilty from some and convicted others of the prisoners. The proper course would have been to give a warning and remand the prisoners till counsel could be

instructed. The popular anger was quickly roused, and the gross impropriety of the whole transaction led to communication with the Home Secretary, and a decision on the part of that official on the distinct impropriety of the conduct of the whole proceedings.

It should be noted, however, that the persons convicted and fined had, by paying their fines, removed any disqualification for office, civil or military, it being specially provided by a statute of 1829 that a felon who has suffered his imprisonment or paid his fine shall be in the same position as if he had received a pardon under the Great Seal. Still, the decision of the Home Secretary is a graceful one, inasmuch it states that, on the recorded facts, the convictions should never have taken place. The town has been put to great expense, not so much in keeping order in the Market Place as in protecting Mr. A. I. Tillyard, the Mayor, from the anger of the mob. If any great success is achieved in South Africa, it will be interesting to see how the Cambridge celebrations will be managed by our municipal authorities.

University Prizemen:—Chancellor's Medal for English Verse, Frank Sidgwick; Porson Prize, R. K. Gaye; Powis Medal, Gilbert Norwood.

DR. T. C. EDWARDS, D.D., Principal of the Theological College, Bala, and formerly Principal of the University College of Aberystwyth, who had been in failing health for some time, died on March 22 at the age of sixty-one. He was the son of Dr. Lewis Edwards, D.D., his predecessor in the Principalship of the Bala Theological College, and a descendant of the Rev. Thomas Charles, B.A., of Bala, one of the founders of the British and Foreign Bible Society. Dr. T. C. Edwards was a graduate of both London and Oxford. In the M.A. list of London University he held the second place, the first place in that year being taken by the late Prof. Jevons. At Oxford he was a scholar of Lincoln College, and took a First Class in the School of Literæ Humaniores. After graduating, however, he chiefly devoted himself to theology, and wrote, among other works, a well known commentary on the First Corinthians. As first Principal of Aberystwyth, he, with other faithful friends of the College, some of whom are still living, succeeded, through much anxiety and apparently insuperable difficulties, in placing the College on a permanent footing. In this work, which has by now borne abundant fruit, Dr. Edwards's energy and magnetic personality contributed in no small degree to the success attained. He was a powerful preacher, and was well known outside the circle of his native land. Merionethshire has been singularly unfortunate in the course of the past year in losing three of her most distinguished sons—Mr. T. E. Ellis, M.P., Dr. Edward Jones, of Dolgellau, one of the most active educationalists in Wales, and now Dr. T. C. Edwards.

The next meeting of the Court of the University of Wales will be held at Wrexham on April 26. On the following day the April meeting of the Central Welsh Board will be held at Carnarvon.

The following gentlemen have been elected by the Guild of Graduates of the University as its representatives on the Court for a period of three years from April 6, 1900:—Mr. D. E. Jones, B.Sc., Her Majesty's Inspector under the Science and Art Department for Wales; Mr. F. Llewelyn Jones, B.A., LL.B., Solicitor, Holywell; Prof. Edward Edwards, M.A., of the University College of Wales, Aberystwyth; Mr. F. P. Dodd, M.A., Headmaster of the County School, Blaenau Festiniog; and Mr. T. W. Phillips, B.A., Headmaster of the County School, Newport, Mon.

### WHAT IS GRAMMAR?

1. At a recent University examination one question in the English paper required candidates to explain what is meant by *grammar* and to give its *chief divisions*. It was my duty to read some hundreds of the answer books, and I was struck by the fact that not one candidate—thanks probably to the bad school-books that abound—was able to give an exact answer to the question, and very few approximated to exactitude. Some, for example, furbished up the antiquated definition current in ladies' "seminaries" early in this century (perhaps in the last) to the effect that "grammar is the art of speaking and writing with propriety"—which it isn't. Others, less badly, called it "the science of words," or even "the science of language," both of which formulæ are too wide and too vague. Similarly, as to the "chief divisions" of grammar, many candidates thought that the "parts of speech" were meant; others gave that hoary quartet "Orthography, Etymology, Syntax, and Prosody," of which only "Syntax" is unobjectionable.

2. Now let it be noted first that grammar proper is not an "art" any more than chemistry proper; both are sciences, which investigate facts and deduce laws or principles, and neither is concerned with the way in which these latter are carried out in practice. Grammar, *e.g.*, takes no more—perhaps less—account of what we call "orthography," or of rhetoric, or of prose or verse composition, or of syllogistic logic, than chemistry does of the alkali trade or of the manufacture of aniline dyes.

3. Next, chemistry having been thus mentioned in connexion with grammar, let us note the close analogy that subsists between the two—so close, indeed, that I was rather surprised that none of the more intelligent candidates should have thought of utilizing it. For how did men work towards and arrive at a science of chemistry? By observing and examining the various forms of matter as they exist in Nature, reducing complex forms to simpler constituents, and these, again, to irreducible elements. If for "forms of matter" we substitute "forms of speech" or "groups of words," then it was by precisely the same procedure that men arrived at a science of grammar; and the imitative repetition, to some extent, of this "analytical" process is the very best way of introducing commencing students to each of those sciences. (See § 9.) In text-books of both, however, the method nearly always adopted is the "synthetical" or constructive one, beginning with irreducible elements, and passing on, firstly, to the simpler, and then to the more and more complex, combinations of such elements.

4. I have instituted this slight comparison in order to arrive at satisfactory definitions. If I am correct, chemistry may be defined as the science that treats of the elements of matter and their various compositions; and, in exactly parallel terms, grammar may be defined as the science that treats of the elements of speech and their various combinations. The latter definition is, I think, at once elastic enough and precise enough to cover grammar, both over its widest ranges—historical grammar, comparative grammar—and within its narrowest limits—*viz.* the special grammar of an individual language at a given stage; *e.g.*, the grammar of present-day English, to which, in this article, I must confine my attention.

5. But what are the "elements of speech"? Some grammar-books appear to ignore speech altogether, and, for elements, go back to letters, as if language depended on the evolution of alphabetical writing! The illustrious authors are unaware that in the history of man, for every word that has been more or less clumsily represented by symbols, thousands of millions have been spoken—*i.e.*, uttered—as clusters, or, rather, concatenations, of voice sounds. It would seem, therefore, at first sight, as if "elements of speech" might be defined as "simple voice sounds," of which such clusters are made up. But this definition will not do; for, firstly, all simple voice sounds are not elements of speech; and, secondly, no such sound in and by itself, unless (as very rarely happens) it is also a word, has any linguistic value. This latter point opens a new consideration—*viz.*, that, unlike the chemist, the grammarian, in much of his work, besides the physical—*i.e.*, acoustic and physiological—characteristics of his speech forms, has to take into account their psychological content—*i.e.*, the percepts, concepts, thoughts, emotions, and volitions expressed by them, or what is commonly called their "meaning"; and of "meaning" the phonetic elements of speech, as such, are destitute. To avoid possible difficulties, therefore, let us take "speech" to denote language regarded on its physical side, and the wider and more abstract "language" to denote speech regarded on its psychological side. Then *elements of speech* may be defined as *simple voice sounds applied to linguistic purposes*. Language appears as soon as "meaning" comes in; its ultimate element, therefore, is the word.

6. The study of the elements of speech in general, as found in various languages, and apart from grammar, has been raised, within the last half-century, almost to an independent science, under the name of *phonetics*. The phonetic system of any particular language is called its *phonology*—sometimes rendered "soundlore"; German, *Lautelehre*—and falls within its grammar, of which (when synthetically treated) it should form the first "chief division." I have seen the name, indeed, in two or three of the more pretentious school-books; but, in each instance that I can call to mind the author proceeded at once to show that he knew little or nothing of the thing.\*

\* *Per contra*, I remember seeing the subject, although the name did not appear, handled with knowledge, and to the requisite extent for a primer, in Dr. Gow's fresh and interesting "Method of English," Part I.

7. Under phonology, two subsidiary matters may be glanced at. The first relates to methods of representing spoken sounds to the eye, by means of *symbols*. Such symbols are purely arbitrary. They may be diagrams (as in Bell's "Visible Speech"), or, say, in Laputa, even material objects. Phoneticians, however, generally use the letters of the ordinary alphabet, and various modifications of them. The main requisite is that every sound should have its own single and special symbol, and no second one. With such an alphabet, or system of symbols, the "spelling," as we call it, of every word in the national vocabulary would correspond with the pronunciation. Our current spelling, often facetiously called "orthography," is to be noticed under phonology, chiefly that it may be condemned for its appalling demerits. It ranks, in fact, with inconvenient habits acquired (sometimes with infinite trouble) through imitation of the traditional bad habits of people about us.

8. The other matter relates to the *syllable*. This, *qua* syllable, is not recognized in language, as above defined; but a single syllable may be, and very often is, a word, and is then, of course, recognized as such. Yet, as a sound-group utterable by a single explosion of the voice, the syllable may fairly find a place under phonology. In formal word-analysis, indeed, the syllable assumes functions of great importance; for, from historical and comparative grammar—at least, of the Indo-European languages—we learn that the fundamental syllable of a composite word, and, probably, the secondary syllable, were themselves originally independent words.

9. From the merely phonetic "elements of speech," let us now turn to the "elements of language"—*i.e.*, words. In this department, although it is generally planned with reference to the form of words, we have also to keep continually before us their meaning and use. It is here and hence that we discover the advantage of the analytical, and the disadvantage of the synthetical, treatment of grammar (§ 3). Thus, before he deals with words, the grammarian's business is to classify them, the classes generally acknowledged being known as the "parts of speech"; but, with one or two exceptions (the noun and interjection), the grounds on which these classes are differentiated involve the relationship of words of one class to words of another. This, in turn, involves references to phrases and to sentences—at least, to simple sentences or propositions—which may be called the psychological units of language, as expressing a single complete thought. But in strictly synthetic grammar we do not reach sentences, either simple or compound, till we come to syntax.

10. It may be pointed out, by the way, that classification is a process that must be applied to grammar, as to other sciences, from one end to the other—to sounds, to rules, and to sentences, as well as to words; without it, indeed, grammar would be a mere unscientific jumble. And the main classes, of course, may severally be subdivided. In the case of words, for example, each class is distributed into sub-classes: nouns—*e.g.*, into "proper," "common," or "masculine," "feminine," &c., according to meaning or use.

11. But, as above said (§ 9), we have now to deal specially with the form, or construction, of words. Hence the second "chief division" of grammar is called *morphology* ("form-lore"), which may be subdivided into *inflexion*, *derivation*, and *composition*. The second and third of these are sometimes taken together under one or the other of the two names; and not without reason, for "derivation" covers the formation of words by means of suffixes, of which some are known to be, and all probably once were, themselves independent words; so that we have here a species of "composition." Again, the latter term indicates the formation of words by prefixes (which have kept their independent character to a much larger extent than suffixes), or by combining national words; and, from another point of view, the resulting words may be regarded as "derivatives" from their primary components. To the term "inflexion" a slight objection may be raised, inasmuch as, besides its titular and abstract use, it takes a concrete sense to indicate a vowel change, and more especially an ending that modifies the relationship of a word; but no practical difficulty arises. This subdivision of morphology, together with the classes and sub-classes of words, used to be treated in English grammars under the head of "etymology," a term for which we have found a better use; and in Greek and Latin grammars, under the head of "accidence," which is still often employed.

12. There should be, however, a fourth subdivision under morphology—*viz.*, *accentuation*; for accent is a powerful and extensive modifier of words—*i.e.*, spoken words. In writing our

rigid orthography carefully conceals its effects from the eye. For example, if the initial syllable of a compound or a derivative word has a long vowel, and is accented, the vowel is often shortened, and the neighbouring vowel or vowels tend to disappear. Thus we write *break+fast* as *breakfast*; but we say *brék'f'ast*; so, *two+pence* gives *túpp'ns*, *knów+lodge* = *nóllej*; and many similar. And, if the accent be shifted from one syllable to another, the former, even if long, tends to disappear—e.g., *compáre*, but *incómp'ráble*; *bálcóny* (the old pronunciation), but now *bálc'ny*. In instances like *exercise* (*x=ks*) beside *example* (*x=qz*) we note phenomena closely similar to the effects produced by the primitive Indo-European accentuation upon the vocabulary of the parent Teutonic speech: which effects, after thousands of years, still survive in modern Teutonic dialects, in the past or passive participles of our own weak verbs. For example, where the final *d* is due to the fact that the full accent originally followed a primitive *t*—e.g., primitive, *domito* = Latin, *domitu-s*; gives English *tamed*—if the accent had immediately preceded the *t* (*domito*), we should have had *-th* for *d*—*tameth*, and so *beloveth*, and thousands more.

13. I have left myself neither time nor space to remark on the third "chief division" of grammar—viz., *syntax*, which deals with the mutual relationships of the words and phrases that make up a simple sentence, whether it stands alone or is a member—i.e., a clause—of a composite sentence; and, likewise, with the relationships, *inter se*, of clauses that make up a sentence of any degree of complexity.

14. To sum up: it appears that the material, or subject-matter, of grammar consists of *sounds, words, and sentences*. The "chief divisions" of grammar are, accordingly, *phonology, morphology*—comprising inflexion, derivation, composition, accentuation—and *syntax*.  
T. LE MARCHANT DOUSE.

## CORRESPONDENCE.

### THE GEOGRAPHICAL ASSOCIATION.

To the Editor of the Educational Times.

SIR,—May I call the attention of any of your readers who are interested in the teaching of geography to the Geographical Association, which was founded some years ago for the improvement of geographical teaching? Hitherto the Association has confined its efforts to the field of secondary education, but, at the annual meeting held in January last at the Imperial Institute in connexion with the English Education Exhibition, the Association was thrown open to teachers in primary schools as well, a step which, it is hoped, will greatly extend its usefulness.

The aim of the Association, explained in some detail in the enclosed leaflet, is, firstly, to supply teachers with information as to the best methods of teaching geography; and, secondly, to impress upon educational authorities the value of geography as an educational subject, when properly taught. The Committee some years ago memorialized various boards of public examiners, and note with pleasure the increasing tendency among examiners in geography to discourage mere learning by rote, and to set questions which call out the pupils' intelligence and reasoning powers. The events of the past few years, with the growth of public interest in what are called Imperial questions, encourage the Committee to hope that public opinion will heartily support their efforts to raise geography in this country to the position it already holds in the educational systems of our chief Continental rivals.

The Association devotes much attention to the improvement of such aids to teaching as text-books, atlases, hand and outline maps, and lantern slides, and possesses a collection of more than 1,500 slides for the use of its members. By means of lectures, meetings for discussion, and the publication of occasional papers, it seeks to spread information regarding the best methods that have been adopted in our own or in foreign countries; and, as there is at present no journal in this country written especially for teachers of geography, the *American Journal of School Geography*, edited by Prof. Dodge, of Columbia University, New York, has been temporarily adopted by the Association as a medium for discussing methods and diffusing information among teachers.

The Association numbers among its members many of the best known teachers of geography in the country, and has from the first received a large measure of encouragement and support from the various geographical societies, whose services to the cause of education it gratefully acknowledges.

I shall be glad to send copies of the enclosed leaflet to any who apply, and to receive the names of persons who may wish to join the Association.—I am, Sir, yours faithfully,

A. J. HERBERTSON, *Hon. Sec.*  
Assistant to the Reader in Geography in the  
University of Oxford.

25 Norham Road, Oxford, March 18, 1900.

# BELL'S ILLUSTRATED CLASSICS.

Edited by E. C. MARCHANT, M.A.,  
late Classical Master at St. Paul's School.

In post 8vo size, 1s. 6d. each (with or without Vocabularies).

The Texts and Vocabularies (without Notes), limp cloth, cut flush,  
1s. each.

NOW READY.

**Cæsar.—De Bello Gallico. Book I.** Edited by A. C. LIDDELL, M.A., Assistant-Master at Nottingham High School.

**Cæsar.—De Bello Gallico. Book II.** Edited by A. C. LIDDELL, M.A.

**Cæsar.—De Bello Gallico. Book III.** Edited by F. H. COLSON, M.A., Headmaster of Plymouth College, and G. M. GWYTHER, M.A., Assistant-Master.

**Cæsar.—De Bello Gallico. Book IV.** Edited by the Rev. A. W. UPCOTT, M.A., Headmaster of St. Edmund's School, Canterbury.

**Cæsar.—De Bello Gallico. Book V.** Edited by A. REYNOLDS, M.A., Assistant-Master at Merchant Taylors' School.

**Cæsar.—De Bello Gallico. Book VI.** Edited by J. T. PHILLIPSON, M.A., Headmaster of Christ's College, Finchley. Prescribed for Cambridge Local and College of Preceptors Certificate.

**Virgil.—Æneid. Book I.** Edited by the Rev. E. H. ESCOTT, M.A., Assistant-Master at Dulwich College.

**Virgil.—Æneid. Book II.** Edited by L. D. WAINWRIGHT, M.A., Assistant-Master at St. Paul's School.

**Virgil.—Æneid. Book III.** Edited by L. D. WAINWRIGHT, M.A., Assistant-Master at St. Paul's School. With a Map of the Wanderings of Æneas.

**Virgil.—Æneid. Book IV.** Edited by A. S. WARMAN, B.A., Assistant-Master at the Grammar School, Manchester.

**Eutropius. Books I. and II.** Edited by J. G. SPENCER, B.A., Assistant-Master at St. Paul's Preparatory School.

**Horace.—Odes. Book I.** Edited by C. G. BOTTING, B.A., Assistant-Master at St. Paul's School.

**Cornelius Nepos.—Epaminondas, Hannibal, Cato.** Edited by H. L. EARL, M.A., Assistant-Master at the Grammar School, Manchester.

**Livy. Book IX., chaps. i.—xxix.** Edited by W. C. FLAMSTEAD WALTERS, M.A.

**Hannibal's First Campaign in Italy.** Selected from Livy, Book XXI., and edited by F. E. A. TRAYES, M.A., Assistant-Master at St. Paul's School.

**Ovid.—Metamorphoses. Book I.** Edited by G. H. WELLS, M.A., Assistant-Master at Merchant Taylors' School.

**Selections from Ovid's Metamorphoses.** Edited by J. W. E. PEARCE, M.A., Merton Court Preparatory School, Sidcup.

## BELL'S ILLUSTRATED LATIN READERS.

Uniform with the Illustrated Classics.  
Price One Shilling each.

**Scalæ Primæ.** Simple Stories and Fables for Translation. With Notes and Vocabulary. By J. G. SPENCER, B.A., St. Paul's Preparatory School.

**Scalæ Mediæ.** Extracts from Eutropius and Cæsar. With Notes and Vocabulary. By PERCY A. UNDERHILL, M.A.

Specimen Copies post free to Headmasters on application.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

# Blackie & Son's New Books.

## Blackie's New Illustrated Latin Series.

Edited by Prof. R. Y. TYBRELL, Litt.D., D.C.L.,  
Examiner to the Universities of London and Glasgow, &c.

**E**ACH Volume is furnished with Introduction, Explanatory Notes, and full  
Vocabularies, and is illustrated with numerous Maps, Plans, and Drawings  
from Coins, Gems, Statues, and other objects of ancient art. With or without  
Vocabularies. Crown 8vo, cloth.

### VOLUMES READY.

**EUTROPIUS.—BOOKS I. AND II.** Edited by W. CECIL LAMING,  
M.A., Classical Master in Edinburgh Academy. 1s. 6d.

This should prove the most attractive edition of this portion of Eutropius yet  
published. The text is printed in large type, and is lavishly illustrated with full-page  
and other pictures of a kind to explain the text and interest young pupils. The  
notes also are printed in a larger type than is usual, and are very clearly and  
simply expressed. There is a complete vocabulary.

**CICERO.—THE FIRST CATILINE ORATION.** Edited by  
C. H. KEENE, M.A., Professor of Greek, Queen's College, Cork. 1s. 6d.

**CICERO.—THE CATILINE ORATIONS (Complete).** Edited  
by C. H. KEENE, M.A. 2s. 6d.

**HORACE.—THE ODES. BOOKS I., II., III., IV.** Edited by  
STEPHEN GWYNN, B.A., late Scholar and Hulsean Exhibitor of Brasenose  
College, Oxford. 1s. 6d. each.

**TACITUS.—AGRICOLA.** Edited by W. C. FLAMSTEAD WALTERS,  
M.A., formerly of Christ's College, New Zealand. 1s. 6d.

**LIVY.—BOOK V.** Edited by W. CECIL LAMING, M.A., Classical  
Master in Edinburgh Academy. 2s. 6d.

**VIRGIL.—AENEID III.** Edited by P. SANDFORD, M.A., Professor  
of Latin at Queen's College, Galway. 1s. 6d. [Nearly ready.

### VOLUMES IN PREPARATION.

**VIRGIL.—GEORGICS I. AND II.** Edited by S. E. WINBOLT,  
M.A., Assistant-Master in Christ's Hospital.

**SALLUST.—THE CATILINE CONSPIRACY.** Edited by the  
Rev. W. A. STONE, M.A., Assistant-Master in Bristol Grammar School.

**LIVY.—BOOK I.** Edited by JOHN BROWN, B.A., Professor of Latin  
in Wellington University, New Zealand.

**LIVY.—BOOKS XXI. AND XXII.** Edited by G. G. LOANE, M.A.,  
Assistant-Master in St. Paul's School.

**CICERO.—PRO LEGE MANILIA.** Edited by W. J. WOOD-  
HOUSE, M.A., Assistant Lecturer in Classics, University College of North Wales.

### OPINIONS OF THE PRESS.

#### *The Odes of Horace.*

"The merits are certainly remarkable. The translations are elegant and faithful,  
and worthy of the original. This edition is further enriched with illustrations from  
antique gems. The parallels drawn from English poetry, especially in linguistic  
usages, are very felicitous."—*Morning Post.*

"The introduction is literary as well as scholarly, and the notes contain all the  
information that even a sixth form should need."—*Literature.*

"The notes are good, far removed from the patent digesting-machinery that is so  
often supplied. The illustrations, chiefly from gems and marbles, are a distinct  
addition to the value of the book."—*University Correspondent.*

#### *The Catiline Orations of Cicero.*

"The introduction (with illustrations) gives an excellent account of Cicero's life  
and times. The notes are clear and to the point and the vocabulary comprehensive.  
Lucky indeed is the schoolboy who finds, within the compass of one small volume  
such as this, practically all that is necessary for the study of the text. The printing  
of the book is excellent."—*Journal of Education.*

"We have already expressed approval of the series as a whole. . . . We can honestly  
praise Prof. Keene's notes as well suited for their purpose."—*Educational Times.*

"It is a good book, and some exercises in Latin prose suggested by the text are a  
valuable innovation."—*Literature.*

#### *The Agricola of Tacitus.*

"The notes appear to be just what is wanted."—*Literature.*

#### *Livy, Book V.*

"Mr. Laming has incorporated excellent matter in his book. . . . There are some  
valuable hints on translation. . . . There are some excellent illustrations which add  
much to the value of the book."—*Spectator.*

## English.

**MACAULAY.—ESSAY ON HORACE WALPOLE.** Edited  
by JOHN DOWNIE, M.A. 2s.

**MACAULAY'S ESSAY ON CLIVE.** Edited by JOHN D. WYNIE,  
M.A. 2s.

**POPE.—RAPE OF THE LOCK.** Edited by FREDERICK RYLAND,  
M.A. 1s. 6d.

**POPE.—ESSAY ON CRITICISM.** Edited by F. RYLAND, M.A. 1s. 6d.

**DRYDEN.—ESSAY ON DRAMATIC POESY.** Edited by  
D. NICHOL SMITH, M.A. [Nearly ready.

**TENNYSON.—SELECT POEMS.** Edited, for Schools, by  
AGNES WILSON. In Three Booklets, paper covers, 2d. each; limp cloth, 3d. each.

1: **MORTE D'ARTHEUR. THE LADY OF SHALOTT.**

2: **MARIANA. DOXA. THE MAY QUEEN.**

3: **THE DAY DREAM. THE DEATH OF THE OLD YEAR.  
THE CHARGE OF THE LIGHT BRIGADE.**

**BROWNING.—SELECT POEMS.** Edited by E. H. BLAKENEY,  
M.A., Headmaster of Grammar School, Sandwich. Paper, 2d.; cloth, 3d.

**PECIENS OF ENGLISH PROSE.** Selected and Edited by  
BERTHA SKEAT, Ph.D., Headmistress of Baliol School, Barnard Castle. 1s. 6d.

**A BRIEF SURVEY OF BRITISH HISTORY.** By G. TOWN-  
SEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge: Assistant-  
Master at Harrow. With Tables, Summaries, Maps, Notes, &c. 1s. 6d.

*The Athenæum* says:—"Mr. Warner's style is clear, direct, and sufficiently varied.  
Moreover, his selection of facts is, as a rule, judicious, and his patriotic and reason-  
able tone, the fullness of the recent history. . . . please us very much. The book is  
well printed, type and paper please the eye, and it is exceedingly cheap. The  
concluding synopsis is a practical and well-worked-out feature of the volume."

## French.

**A SHORT HISTORY OF FRENCH LITERATURE.** By  
L. E. KASTNER, B.A., Assistant Lecturer in Modern Languages at Gonville and  
Cuis College, Cambridge, and H. G. ATKINS, M.A. (Lond.), B.A. (Camb.),  
Instructor in German at the Royal Naval College, Greenwich. [Nearly ready.

**FIRST FRENCH COURSE.** By J. J. BRUZEMAKER, B.A., formerly  
Examiner to the College of Preceptors.

A KEY to this well known book is now in the press, and will shortly be issued.

**FRENCH STORIES FOR MIDDLE AND UPPER FORMS.**  
By Professor WEEKLEY, M.A. [In the press.

**MY FIRST FRENCH BOOK.** A Picture Reading-Book. By  
MARGUERITE NINET. Illustrated. 1s.

A little book of easy anecdotes, stories, and sketches, in large type, with pictures  
to each lesson, and complete vocabularies.

## Science and Art.

**FIRST STEPS IN EARTH KNOWLEDGE. (Preliminary  
Physiography, Section I.)** By J. ANSTED HARRISON, B.Sc. (Lond.),  
A.R.C.Sc., Science Master, County School, South. And by W. JEROME  
HARRISON, F.G.S. Illustrated. Crown 8vo, cloth, 2s. 6d.

"A really excellent introduction to Physiography. . . . Every experiment has  
prefixed to it a list of the apparatus required, and a short statement of the purpose  
for which it is performed—a useful feature."—*Literature.*

"Well written, illustrated, and printed."—*Educational Times.*

**AN INTRODUCTION TO ANALYTICAL CHEMISTRY.** By  
Prof. G. G. HENDERSON, D.Sc., M.A., F.I.C., and M. A. PARKER, B.Sc. 5s.

**SHADED DRAWING OF MODELS AND ORNAMENT  
FOR CLASS-TEACHING.** By LEWIS R. CROSSKEY, Director Industrial  
Art Department, Glasgow Technical College. 24 Sheets, beautifully printed on  
superfine heavy paper, each Sheet 28 ins. by 22 ins. In portfolio, 31s. 6d. per  
Set. Illustrated Prospectus on application.

**BLACKIE'S SOUTH KENSINGTON DRAWING SHEETS.**  
Based on Posner's South Kensington Drawing Books. Six Sets of 20 Sheets  
each. Sets I. and II. (Outline only), price 10s. each. Sets III.-VI. (Coloured),  
price 12s. 6d. each. Coloured Prospectus on application.

# MESSRS. METHUEN'S LIST

## WORKS BY A. M. M. STEDMAN, M.A.

**Initia Latina:** Elementary Lessons in Latin Accidence. Fourth Edition. Fcap. 8vo, 1s.

**First Latin Lessons.** Fifth Edition. Enlarged. Crown 8vo, 2s.

**First Latin Reader.** With Notes adapted to the Shorter Latin Primer and Vocabulary. Fourth Edition. Revised. 18mo, 1s. 6d.

**Caesar.—The Helvetic War.** With Notes and Vocabulary. Second Edition. 18mo, 1s.

**Livy.—The Kings of Rome.** With Notes and Vocabulary. Illustrated. 18mo, 1s. 6d.

**Easy Latin Passages for Unseen Translation.** Sixth Edition. Fcap. 8vo, 1s. 6d.

**Exempla Latina: First Exercises on Latin Accidence.** With Vocabulary. Crown 8vo, 1s.

**Easy Latin Exercises on the Syntax of the Shorter and Revised Latin Primers:** With Vocabulary. Eighth and Cheaper Edition. Revised. Crown 8vo, 1s. 6d. Issued with the consent of Dr. KENNEDY.

**The Latin Compound Sentences:** Rules and Exercises. Crown 8vo, 1s. 6d. With Vocabulary, 2s.

**A Vocabulary of Latin Idioms and Phrases.** Second Edition. 18mo, 1s.

**Notanda Quaedam: Miscellaneous Latin Exercises on Common Rules and Idioms.** Third Edition. Fcap. 8vo, 1s. 6d. With Vocabulary, 2s.

**Latin Vocabulary for Repetition:** Arranged according to Subjects. Eighth Edition. Fcap. 8vo, 1s. 6d.

**Easy French Passages for Unseen Translation.** Third Edition. Fcap. 8vo, 1s. 6d.

**Easy French Exercises on Elementary Syntax.** With Vocabulary. Second Edition. Crown 8vo, 2s. 6d. Key, 3s. net.

**French Vocabulary for Repetition.** Eighth Edition. Fcap. 8vo, 1s.

## TEXT-BOOKS OF TECHNOLOGY

**Carpentry and Joinery.** By F. C. WEBBER. With numerous Illustrations. Crown 8vo, 3s. 6d.  
"It has the marks of practical knowledge set forth by a practical teacher."—*Guardian*.

**Practical Mechanics.** By SIR WYLLIE H. WELLS. Illustrated. Crown 8vo, 3s. 6d.

**Practical Physics.** By H. STROUD, D.Sc., M.A., Professor of Physics in the Durham College of Science, Newcastle-on-Tyne. Fully Illustrated. Crown 8vo, 3s. 6d.

**Practical Chemistry.** By W. FRENCH, M.A. Part I. With numerous Diagrams. Crown 8vo, 1s. 6d. [*Shortly*].

**Millinery, Theoretical and Practical.** By Miss HILL. With numerous Diagrams. Crown 8vo, 2s. 6d. [*Shortly*].

**Educational Reform. The Task of the Board of Education.** By FABIAN WARE. Crown 8vo, 2s. 6d.

**General Elementary Science.** By J. T. DUNN, D.Sc., and V. A. MUNDELLA. With many Illustrations. Crown 8vo, 3s. 6d. [*Methuen's Science Primer*].

**A Constitutional and Political History of Rome.** By T. M. TAYLOR, M.A., Fellow of Gonville and Caius College, Cambridge, Senior Chancellor's Medalist for Classics, Porson University Scholar, &c., &c. Crown 8vo, 7s. 6d.  
An account of the origin and growth of the Roman institutions, and a discussion of the various political movements in Rome from the earliest times to the death of Augustus.

**Lacemaking in the Midlands.** By C. C. CHANNER and M. E. ROBERTS. With 16 Full-page Illustrations. Crown 8vo, 2s. 6d. [*Shortly*].

## SCHOOL EXAMINATION SERIES

EDITED BY A. M. M. STEDMAN, M.A. Crown 8vo, 2s. 6d.

**French Examination Papers in Miscellaneous Grammar and Idioms.** By A. M. M. STEDMAN, M.A. Tenth Edition.  
**A Key,** issued to Tutors and Private Students only, to be had on application to the Publishers. Fourth Edition. Crown 8vo, 6s. net.

**Latin Examination Papers in Miscellaneous Grammar and Idioms.** By A. M. M. STEDMAN, M.A. Tenth Edition.  
**Key,** Fourth Edition (issued as above), 6s. net.

**Greek Examination Papers in Miscellaneous Grammar and Idioms.** By A. M. M. STEDMAN, M.A. Sixth Edition.  
**Key,** Second Edition (issued as above), 6s. net.

**Examination Papers in English History.** By J. TAIT WARDLAW, B.A., King's College, Cambridge. Crown 8vo, 2s. 6d.

**German Examination Papers in Miscellaneous Grammar and Idioms.** By E. J. MORICH, Manchester Grammar School. Fifth Edition.  
**Key,** Second Edition (issued as above), 6s. net.

**History and Geography Examination Papers.** By C. H. SPENCE, M.A., Clifton College. Second Edition.

**Science Examination Papers.** By R. E. STEEL, M.A., F.C.S., Chief Natural Science Master, Bradford Grammar School. In Three Vols. Part I., Chemistry. Part II., Physics.

**General Knowledge Examination Papers.** By A. M. M. STEDMAN, M.A. Third Edition.  
**Key,** Second Edition (issued as above), 7s. net.

**The Scientific Study of Scenery.** By J. E. MARR, Fellow of St. John's College, Cambridge. Illustrated. Crown 8vo, 6s.  
An elementary treatise on geomorphology—the study of the earth's outward forms. It is for the use of students of physical geography and geology, and will also be highly interesting to the general reader.

**A Class Book of Dictation Passages for the Use of Middle and Higher Forms.** By the Rev. W. WILLIAMSON. Second Edition. Crown 8vo, 1s. 6d.  
The passages are selected from recognized authors, and a few newspaper passages are included. The lists of appended words are drawn up mainly on the principle of comparison and contrast, and will form a *répertoire* of over 2,000 words, embracing practically all the difficulties felt by the pupil.

**A Short Story of English Literature.** By EMMA S. MELLOWS. Crown 8vo, 3s. 6d.  
The history of English literature told in a simple style for young students. It is particularly rich in biographical detail and contains a considerable number of illustrative extracts.

**The Construction of Large Induction Coils.** By A. T. HARR. With numerous Diagrams. Demy 8vo, 5s.

**The Metric System.** By LÉON DELBOS. Crown 8vo, 2s.  
A theoretical and practical guide for use in elementary schools and by the general reader.

## CLASSICAL TRANSLATIONS

EDITED BY H. F. FOX, M.A., Fellow and Tutor of Brasenose College, Oxford.

**Cicero.—De Natura Deorum.** F. BROOKS, M.A., late Scholar of Balliol College. Crown 8vo, 3s. 6d.

**Cicero.—De Oratore, I.** E. N. P. MOOR, M.A., late Assistant-Master at Clifton. Crown 8vo, 3s. 6d.

**Cicero.—Pro Milone, Pro Murena, Philippic II. in Cæcilium.** H. D. BLAKISTON, Fellow and Tutor of Trinity College, Oxford. Crown 8vo, 5s.

**Horace.—Odes and Epodes.** A. D. GODLEY, M.A. Crown 8vo, 2s.

**Sophocles.—Electra and Ajax.** E. D. A. MORSEHEAD, M.A., Assistant-Master at Winchester. Crown 8vo, 2s. 6d.

**Aeschylus.—Agamemnon, Choephores, Eumenides.** LEWIS CAMPBELL, M.A., LL.D., late Professor of Greek at St. Andrews. Crown 8vo, 5s.

**Lucian.—Six Dialogues (Nigrinus, Icaro-Merippus, Cock, Ship, Parasite, Lover of Falsehood).** S. T. IRWIN, M.A., Assistant-Master at Clifton. Crown 8vo, 3s. 6d.

**Tacitus.—Agricola and Germania.** B. B. TOWNSHEND, M.A., late Scholar of Trinity College, Oxford. Crown 8vo, 2s. 6d.

## METHUEN'S COMMERCIAL SERIES

EDITED BY H. DE B. GIBBINS, D.Litt., M.A. Crown 8vo.

**British Commerce and Colonies from Elizabeth to Victoria.** By H. DE B. GIBBINS, D.Litt., M.A., Author of "The Industrial History of England," &c. Third Edition. 2s.

**Commercial Examination Papers.** By H. DE B. GIBBINS, D.Litt., M.A. 1s. 6d.

**The Economics of Commerce.** By H. DE B. GIBBINS, D.Litt., M.A. 1s. 6d.

**A Primer of Business.** By S. JACKSON, M.A. Third Edition. 1s. 6d.

**German Commercial Correspondence.** By S. E. BALLY. Crown 8vo, 2s. 6d.

**French Commercial Correspondence.** By S. E. BALLY. Second Edition. 2s.

**A French Commercial Reader.** By S. E. BALLY. 2s.

**Commercial Geography,** with special reference to the British Empire. By L. W. LYDE, M.A. Second Edition. 2s.

**Commercial Arithmetic.** By F. G. TAYLOR, M.A. Third Edition. 1s. 6d.

**Précis Writing and Office Correspondence.** By E. E. WHITEFIELD, M.A. 2s.

**Guide to Professions and Business.** By HENRY JONES. 1s. 6d.

**The Principles of Bookkeeping by Double Entry.** By J. E. B. M'ALLEN, M.A. 2s.

**A History of Egypt, from the Earliest Times to the Present Day.** Edited by W. M. FLINDERS PETERIE, D.C.L., LL.D., Professor of Egyptology at University College. Fully Illustrated. In Six Volumes. Crown 8vo, 6s. each.  
Vol. VI. **Egypt in the Middle Ages under the Saracens.** By STANLEY LANE POOLE. [*Shortly*].

**A Short History of Rome.** By J. WELLS, M.A., Fellow and Tutor of Wadham College, Oxford. With 3 Maps. Second Edition. Crown 8vo, 3s. 6d.  
"An original work, written on an original plan and with uncommon freshness and vigour."—*Speaker*.

**Passages for Unseen Translation.** By E. C. MARCHANT, M.A., Fellow of Peterhouse, Cambridge, and A. M. COOK, M.A., late Scholar of Wadham College, Oxford; Assistant-Masters at St. Paul's School. Crown 8vo, 3s. 6d.  
"A capital selection, and of more variety and value than such books usually are."—*Athenæum*.

**Exercises in Latin Accidence.** By S. E. WINBOLT, Assistant-Master in Christ's Hospital. Crown 8vo, 1s. 6d.  
"Accurate and well arranged."—*Athenæum*.

**Notes on Greek and Latin Syntax.** By C. BUCKLAND GREEN, M.A., Assistant-Master at the Edinburgh Academy, late Fellow of St. John's College, Oxon. Crown 8vo, 3s. 6d.  
"Well arranged, clear, and extremely useful."—*School Guardian*.

**New Testament Greek. A Course for Beginners.** By G. ROWELL, B.A. With a Preface by WALTER LOCK, D.D., Warden of Keble College. Crown 8vo, 3s. 6d.

**A Greek Anthology.** Selected by E. C. MARCHANT, M.A., Fellow of Peterhouse, Cambridge, and Assistant-Master at St. Paul's School. Crown 8vo, 3s. 6d.

# SCIENCE & ART DEPARTMENT EXAMINATIONS.

SUITABLE BOOKS IN THE  
**Organized Science Series.**

FOR THE ELEMENTARY STAGE.

2s. each Volume.

**PRACTICAL PLANE AND SOLID GEOMETRY.**

[In preparation.]

**MACHINE CONSTRUCTION AND DRAWING.**

[In preparation.]

**BUILDING CONSTRUCTION.**

[In preparation.]

**FIRST STAGE MATHEMATICS.** Containing all the Algebra and Euclid required.

[In preparation.]

**FIRST STAGE MECHANICS (SOLIDS).** By F. ROSENBERG, M.A., B.Sc. *Second Edition.*

**FIRST STAGE MECHANICS OF FLUIDS.** By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc. *Second Edition.*

**FIRST STAGE SOUND, HEAT, AND LIGHT.** By JOHN DON, M.A., B.Sc.

**FIRST STAGE MAGNETISM AND ELECTRICITY.** By R. H. JUDE, M.A. Cantab., D.Sc. Lond. *Second Edition.*

**FIRST STAGE INORGANIC CHEMISTRY (THEORETICAL).** By G. H. BAILEY, D.Sc. Lond., Ph.D. Edited by WILLIAM BRIGGS, M.A., F.C.S.

**FIRST STAGE HUMAN PHYSIOLOGY.** [In preparation.]

**FIRST STAGE BOTANY.** By A. J. EWART, D.Sc. [In preparation.]

**FIRST STAGE PHYSIOGRAPHY.** By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S.

**SECTION ONE PHYSIOGRAPHY.** [In preparation.]

**FIRST STAGE HYGIENE.** By R. A. LYSTER, B.Sc. [In preparation.]

Price 1s.

**FIRST STAGE INORGANIC CHEMISTRY (PRACTICAL).** By F. BEDDOW, Ph.D., D.Sc. *Second Edition.*

Price 1s. 6d.

**PRACTICAL ORGANIC CHEMISTRY.** By GEORGE GEORGE, F.C.S.

FOR THE ADVANCED STAGE.

3s. 6d. each Volume.

**SECOND STAGE MATHEMATICS.** Being the Additional Algebra and Euclid with the Trigonometry required for the Second Stage. Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. *Second Edition.*

**ADVANCED MECHANICS.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Vol. I., Dynamics.

**ADVANCED MECHANICS.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Vol. II., Statics. *Second Edition.*

**ADVANCED HEAT.** By R. WALLACE STEWART, D.Sc. Lond. *Second Edition.*

**ADVANCED MAGNETISM AND ELECTRICITY.** By R. WALLACE STEWART, D.Sc. Lond.

**ADVANCED INORGANIC CHEMISTRY.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. *Second Edition.*

Price 2s.

**ADVANCED INORGANIC CHEMISTRY (PRACTICAL).** By R. WALLACE STEWART, D.Sc., and WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. [In the press.]

Price 1s. 6d.

**PRACTICAL ORGANIC CHEMISTRY.** By GEORGE GEORGE, F.C.S.

Complete Catalogue of the ORGANIZED SCIENCE SERIES, and List of Books classified for College of Preceptors, London University, and other Examinations, free on application.

## FORECASTS AND COMMENTS.

April 2, 1900.

At the College of Preceptors, on Wednesday, April 4, Mr. A. H. Kahn, M.A., of University College School, will read a paper on "Commercial Education in Secondary Schools." The chair will be taken at 7.30 p.m. by Dr. William Garnett, M.A., D.C.L., Secretary of the Technical Education Board of the London County Council.

IN connexion with the Paris Exhibition this year, an International Congress on Physical Education will be held between August 30 and September 6. It is intended to establish a permanent International Technical Commission. The General Secretary of the Congress is Prof. Georges Demeny, 95 Avenue de Versailles, with whom contributors of papers and intending visitors are requested to communicate.

THE Technical Education Board of the London County Council, acting as the Local Authority under Clause VII. of the "Science and Art Directory," has been entrusted with the duty of convening meetings for the election of special local secretaries for the conduct of the forthcoming Science and Art Examinations. The following gentlemen have been elected to serve for the various districts of the Metropolis:—Chelsea and Westminster, J. R. Langler, Esq., 128 Horseferry Road, Westminster, S.W.; City (East) and Hackney, W. H. Jeffries, Esq., 87 Mattison Road, Haringay, N.; City (West) and Finsbury, W. H. Congreve, Esq., Birkbeck Institution, Bream's Buildings, Chancery Lane, E.C.; Greenwich and Deptford, J. S. Redmayne, Esq., Goldsmiths' Institute, New Cross, S.E.; Lambeth (East), E. Janau, Esq., 92 Elms Road, Clapham Common, S.W.; Lambeth (West), The Rev. E. B. Hugh Jones, M.A., St. John's Training College, Battersea, S.W.; Marylebone, Robert Mitchell, Esq., The Polytechnic, Regent Street, W.; Southwark and Lambeth (North), E. B. Gammon, Esq., 18 Grosvenor Park, Camberwell, S.E.; Tower Hamlets, E. J. Sharpe, Esq., 30 Powerscroft Road, Lower Clapton, N.E.; Woolwich and Plumstead, J. R. Clayton, Esq., Royal Arsenal Mechanics' Institution, Plumstead Road, Woolwich, S.E. The secretaries named above will be responsible for the examinations in the districts for which they have been elected, and communications with regard to the examinations should be addressed to them. The examinations of the Department will commence on April 28, and will extend over several weeks.

PROF. H. G. SEELEY, F.R.S., will conduct the annual course of excursions of the London Geographical Field Class, arranged to illustrate the physical geography and geology of hills, valleys, and rivers in the basin of the Thames. The course begins on April 28. The excursions this year illustrate the geological structure of the London basin by devoting a day to examination of each of the cretaceous groups of rock which share in the great trough-shaped fold which depresses the overlying tertiary strata. The stratification will be seen at Godalming, Otford, Gomshall, Oxted, and Upnor. One excursion to Bedford will be made in illustration of the oolitic rock which has been found beneath London in some deep borings.

THE Royal Agricultural Society of England and the Highland and Agricultural Society of Scotland have joined forces in

the establishment of an examination in the science and practice of agriculture to take the place of the separate examinations which have heretofore been held by the two Societies independently. Candidates who pass this examination, which is under the management of the National Agricultural Examination Board appointed by the two Societies, are to receive the National Diploma in Agriculture. Those who obtain not less than a certain percentage of the maximum number of marks in each of the subjects will receive the Diploma with Honours, a gold medal being awarded to the candidate who is highest on the Honours list. It has been arranged that the first examination for the Diploma shall be held in the Great Hall of the Yorkshire College, Leeds, on Monday, April 30, and five following days.

THE examination for the Lightfoot Scholarship will begin at Cambridge on May 1. It is open for competition to all members of the University who, having resided at least one year and being still in residence, or having taken their first degree, are under twenty-five years of age when the examination begins. The names of candidates should be sent to the Vice-Chancellor, through their tutors, not later than April 28.

THE examination for Tyrwhitt's Hebrew Scholarships and the Mason Prize for Hebrew will begin at the same University on Tuesday, May 8. Candidates for these scholarships or the Mason prize must send their names to the Vice-Chancellor on or before April 25.

AT St. John's College, Cambridge, an examination for election to a choral studentship will be held on Wednesday, May 2. The studentship will be awarded to a bass singer. Further information may be obtained from any of the tutors, Dr. Sandys, or the Rev. C. E. Graves.

THE Council of Bedford College for Women will, in June next, award an additional science scholarship, the "Henry Tate Scholarship," of the value of £50 per annum for three years. This scholarship was endowed by the late Sir Henry Tate. The Committee of the Liberal Memorial to Mr. Gladstone have offered to the Council an annual prize of the value of £5 to be expended in books, to be given for proficiency in history, political science, or economics. This prize will be open for competition to all present students and all students who have left the college not more than one session. The first award will be made in the Easter term 1901; the subject will be announced during next term.

THE local centre examinations of the London College of Music in various branches of practical music will commence on the 2nd inst. In theory of music the examinations will be held simultaneously at all centres on April 7. In the teaching department of the College the new term will begin on April 23, when rehearsals will also be resumed of the orchestra, choir (S.A.T.B.), operatic class, string quartet, and ladies' choir.

THE Bangor Old Students' Association will hold its annual *r union* at Bangor during the Easter vacation, beginning on Thursday, April 12, and ending on Tuesday, April 17.

THE second course of "Jowett Lectures" will be delivered at the Passmore Edwards Settlement, Tavistock Place, by Prof. George Adam Smith, of Glasgow, on Thursday, April 26, and seven following Thursdays, at 3 p.m., and again at 8 p.m. The subject will be "The Religion of Israel in the Eighth and Seventh Centuries B.C."

THE Special Inquiries Branch of the Education Department have again prepared a table of holiday courses on the Continent for instruction in modern languages. The courses will be held as follows:—(1) in Germany at Bonn (August 6–18); Greifswald (July 16–August 4); Jena (August 6–18); conversation

classes continue until August 25), and Marburg (First Course, July 8–28; Second Course, August 5–25). (2) in France at Elbeuf (August 3–28); Lisieux (August 3–28); Tours (August 3–24); and Paris (First Course, July 2–31; Second Course, August 1–31). (3) in Switzerland at Geneva (July 18–August 28); Lausanne (July 19–August 29); and Neuchatel (First Course, July 16–August 11; Second Course, August 13–September 8). For further details we must refer our readers to the complete table above mentioned.

THE heads of Colleges at Oxford and Cambridge have agreed to accept the first Monday in December as the date before which no scholarship examinations shall be held. The agreement applies to all open scholarships, whether given for classics, mathematics, science, or history, and to all close scholarships. This is hard luck for a boy who completes his nineteenth year shortly before that date. But the age difficulty is familiar at the Universities, and we must conclude that, in a choice of evils, the authorities have chosen that which seems to them to be the least.

A CORRESPONDENT of the *Oxford Magazine*—which, we regret to see, loses the services of its late versatile and genial editor—takes a pessimistic view of the change:—

The *Oxford Magazine* and the schoolmasters must be easily pleased if they think that the new arrangement here as to scholarships is any gain or a matter of congratulation. It rather makes confusion worse confounded; by it eighteen colleges examine in the space of six weeks! It is not for the sake of any single college that we complain; all are equally likely to suffer in the *m le*, and deserve to do so: but, in the interests of the persons most concerned, i.e., the schoolboys, may we not ask if something can be done to stop this suicidal rivalry? The Headmasters' proposal of a close time has simply resulted in cutting off a month of the scholarship season, and already a representative of one of the most distinguished schools in England is writing to the *Times* to protest. Neither the Headmasters nor the colleges seem to have any care for boys who had the misfortune to be born in the summer months. It is to be hoped that after this year, at any rate, the colleges will consent to drop their recriminations, and adopt a reasonable rearrangement of their examinations. If not, there is nothing for it but Government interference, by a new Commission or otherwise.

THE War Office is lavishing commissions on the Universities. In addition to the first distribution, it has offered seventy-three each to Oxford and Cambridge, twenty-eight to Dublin, twenty to London, and smaller numbers to other Universities.

EDINBURGH UNIVERSITY has conferred its honorary degree of LL.D. for the first time on a woman. The new Doctor is Miss Eleanor H. Ormerod, the entomologist, who for many years, under Government auspices, has done excellent work by studying the insect pests of agriculture.

THE Senatus Academicus of Glasgow University have conferred the honorary degree of Doctor of Laws on Mr. Robert Caird, F.R.S.E., President of the Institution of Engineers and Shipbuilders in Scotland; Professor A. R. Forsyth, Cambridge; Mr. John G. Kerr, M.A., Headmaster of Allan Glen's School, Glasgow; Mr. Andrew Stewart, D.L., Glasgow; *emeritus* Professor George G. A. Murray, Glasgow; and Mr. Arthur S. Woodward, of the Geological Department of the British Museum.

MR. E. WEEKLEY, M.A., contributes to the *University Correspondent* a good estimate of the value of a German degree of Ph.D.—which, as he says, is now "as much in danger of being over-valued as it was previously of being under-valued."

Germany has twenty-two Universities, Austria seven, and Switzerland four, and, though the regulations vary slightly in individual cases, the general conditions laid down by the authorities are, roughly speaking, the following:—(1) Proof that the candidate has studied for three years at a University. (2) A dissertation on some subject approved by the faculty. (3) An oral examination (practically always

in German) on the branch of learning from which the subject of the dissertation is taken (*Hauptfach*), and on two other branches selected by the candidate (*Nebenfächer*). (4) A fee of about £15.

\* \* \*

THE value of such a degree evidently depends on that of the three years of University study. As for the dissertation, Mr. Weekley says:

The German Doctorate of a good University is, if obtained with distinction, a proof of sound scholarship and original power; but it is erroneous to suppose that the average degree is at all equal in value to a good place in an Honours school at one of the English Universities. The dissertation is supposed theoretically to constitute an original contribution to the advancement of learning; in the majority of cases it is merely a laborious and minute compilation of a set of facts drawn from a limited field connected with some special subject.

\* \* \*

THERE will be a fortnight's delay, beyond that which we mentioned last month, before the London University statutes can receive the Royal Assent. The responsibility is thrown on the Queen's printers. The Commissioners state, in their final report, that neither the Royal College of Music nor the Royal Academy of Music is willing to become a school of the University except on conditions which the Commissioners were unable to accept; and, in the circumstances, they made neither Trinity College nor the Guildhall School of Music a school of the University; but they included a certain number of the teachers of the principal schools of music amongst the recognized teachers of the University, so that internal students of the University would have the opportunity of pursuing their course of study at those institutions. The Commissioners regret to state that the four Inns of Court have declined, without explanation, to join in establishing a law school. Such a school is very necessary to the completeness of the University, and it is hoped that further steps may be taken to obtain the co-operation of the Inns.

\* \* \*

At the meeting of the Senate of Dublin University on Shrove Tuesday, a grace was passed for the conferring of the degree of LL.D. *honoris causa* at the next Commencement on his Highness Sir Bhagwatsinghji Sagramji, K.C.I.E., Thakur Saheb of Gondal, an Indian prince who is much interested in the cause of education. We gave an account, a few months ago, of some of the more notable services of the Thakur to education in India.

\* \* \*

On March 3 Dr. William Garnett gave a lecture at the Durham College of Science on "English Education, as illustrated by the Education Exhibition." The Warden presided, and unveiled the bust of Dr. Garnett, modelled by Mr. G. J. Frampton, A.R.A. Dr. Garnett was formerly Principal of the College.

\* \* \*

At Berlin the Prussian Academy of Sciences has celebrated its bicentenary. The Minister of Education, Dr. Studt, read the Imperial decree providing for the augmentation of the chairs devoted to German philology and technical sciences. He further announced that His Majesty had provided means for the publication of the works of Wilhelm von Humboldt and of the Dictionary of Classical Jurisprudence. A number of decorations in honour of the day had also been awarded, including the Order of the Red Eagle to Prof. Theodor Mommsen. Lord Kelvin, of Glasgow, and the Right Hon. Frederick Max Müller, of Oxford, were elected foreign members of the Academy; and as corresponding members the following gentlemen were elected:—Prof. Josiah Willard Gibbs, Newhaven, U.S.A.; Sir John Burdon Sanderson, Oxford, physico-mathematical class; Prof. Frederick Kenyon, London, and Prof. J. P. Mahaffy, Dublin, philosophical-historical class; Prof. John Stuart Murray, London, for history; Prof. Francis Griffith, Ashton-under-Lyne, Oriental philology; and Prof. Frederick William Maitland, Cambridge, for jurisprudence.

\* \* \*

THE Kaiser certainly deserves well of the friends of science, both in Germany and elsewhere. In his address of welcome to

the Academy, he mentioned its relations with the Hohenzollern rulers since its foundation by Leibnitz. "Let it continue its labours of disinterested devotion," the Emperor concluded, "so that, in the words of Leibnitz, through science might be promoted the honour of God and all that is best in human races."

\* \* \*

MR. FABIAN WARE, author of the series of essays on "Educational Reform," reviewed in our last number, has been named as Director of the British Educational Section of the Paris Exhibition. Mr. Ware lectured during the month before the Franco-English Guild, in Paris, on "Secondary Education in England, with special reference to the Board of Education Act." Our neighbours, it seems, show a friendly eagerness to be abreast of our doings in these matters.

ON the nomination of the Secretary for Scotland, the Rev. J. Marshall Lang, D.D., has been appointed to the Principalship of Aberdeen University, which was vacant by the death of Sir William Geddes.

\* \* \*

DR. EDWARD CAIRD, Master of Balliol College, Oxford, who was formerly Professor of Moral Philosophy at Glasgow University, has been nominated as Gifford Lecturer in the latter University in place of Sir Michael Foster, M.P.

\* \* \*

SIR WILLIAM MARKBY, Reader of Indian Law at Oxford, has been appointed a Perpetual Curator of the Indian Institute. He is succeeded as Curator by the Rev. W. H. Hutton, of St. John's College. Mr. F. C. Montague, M.A. Oriel, has been appointed a Curator of the Institute in place of the late Sir William Hunter.

\* \* \*

MR. E. J. TREVELYAN, late Judge of the Calcutta High Court and Vice-Chancellor of Calcutta University, has been appointed Reader of Indian Law at Oxford in place of Sir William Markby, resigned.

\* \* \*

Two headships are vacant at Oxford by the resignation of Dr. J. E. Sewell, Warden of New College since 1860, and of the Hon. G. C. Brodrick, D.C.L., Warden of Merton since 1881. No fewer than six heads, by the way, were elected in 1881—Sir W. Anson, Warden of All Souls; Dr. Fowler, President of Corpus; Dr. Bright, Master of University; Mr. Thorley, Warden of Wadham; Dr. Inge, Provost of Worcester; and Dr. Brodrick. The oldest head of a college (by election) will now be Dr. Bellamy, President of St. John's.

\* \* \*

At Cambridge, Dr. Langley has been approved as Deputy for the Professor of Physiology, Sir Michael Foster, up to Michaelmas, 1901.—Mr. W. B. Hardy, M.A., has been appointed Senior Demonstrator in Physiology for a period of five years, from Christmas, 1899.—Dr. H. K. Anderson has been reappointed Assistant-Demonstrator.

\* \* \*

THE General Board of Studies at Cambridge has appointed Dr. Breul to be Reader in Germanic, and Mr. E. G. W. Braunscholtz, M.A., to be Reader in Romance; whilst the appointments of University Lecturers in French and German are cancelled. Mr. H. Woods, M.A., has been appointed University Lecturer in Palæozoology at Cambridge for a period of five years from Michaelmas, 1899.

\* \* \*

DR. HECTOR CLARE CAMERON, President of the Faculty of Physicians and Surgeons, Glasgow, has been elected to the Chair of Clinical Surgery in the University.

\* \* \*

THE REV. J. P. MAHAFFY, Professor of Ancient History in the

University of Dublin, has expressed a desire to resign his Chair.

\* \* \*

AT Owens College, in pursuance of the Act of Parliament passed in 1899, Mr. R. C. Christie, Sir W. H. Houldsworth, Bart., M.P., and Dr. Schunck were re-elected governors; and the Rev. Dr. Maclaren, Sir F. Forbes Adam, Mr. Edward Partington, and Mr. W. J. Crossley have been elected governors of the College. At a recent meeting of the Court, the Marquis of Lorne, M.P., was elected Parliamentary governor in place of Lord Balcarras, who has resigned. Mr. A. H. Worthington was re-elected a member of the Council, and Prof. Jebb, M.P., was elected a representative of the Court of the University in place of the late Mr. Jacob Bright, the other retiring representatives being reappointed. On the recommendation of the Senate, Mr. W. A. Bone was appointed demonstrator and assistant lecturer in chemistry and assistant lecturer in metallurgy, and Mr. F. W. Gamble demonstrator and assistant lecturer in zoology.

\* \* \*

THE Principalship of the Bala Theological College is vacant by the death of Dr. Charles Edwards.

\* \* \*

THERE is a vacancy for a Lecturer in French at Liverpool University College, and for an Assistant-Lecturer in French at Mason University College, Birmingham. Dr. Tille, Lecturer in German at Glasgow University, has retired from his position in consequence of extra-mural utterances and intra-mural intolerance.

Literary Gossip. THE *Periodical* for March has a highly interesting illustrated account of the Oxford University Press Binding House, an art manufactory which employs hundreds of the most skilful artisans of both sexes. Some of its best products are naturally seen in the covers of Bibles, for which 100,000 skins are annually used, whilst over a million copies are sold every year.

Only long experience enables one to differentiate between the different kinds of leather, which, by-the-by, are called by purely conventional names. In the leather store at the Binding House all the better kinds of skins are kept in stock. Here is the genuine Russia leather, the skin of small Russian cows being used in this connexion. The undyed skin alone possesses the distinctive aroma of Russian leather in perfection. Only those skins exported by the Russian house of Savin, and bearing its stamp, are generally regarded in the trade as genuine. The odour is supposed to be derived from some gum, but, however this may be, the process is a secret one, and has been jealously kept for some two centuries. The imitations are numerous—thanks to the use of creosote, &c.—and so good that even an expert might be baffled unless he had some of the genuine Russia beside him. Imitation Russia leather is often made of "English calf." Goats' skins provide most of the best binding leather.

\* \* \*

THE Binding House must be in its way a paradise of artistic craftsmen. Some of the more elaborate bindings (not a few of which will be seen at the Paris Exhibition) have taken the artists weeks and months to perfect. Sometimes the workman follows a copy; sometimes he decorates the leather with a design of his own. The best bindings of this class cover the art publications of the Clarendon Press, the Oxford edition of the poets, prayer books, and other devotional works.

\* \* \*

MR. GOLDWIN SMITH seems to have begun—and not yet ended—a complete career as a Canadian scholar and man of letters since he was Regius Professor of History at Oxford. More than that, he almost appears to have transferred the freshness and energy of youth to the closing years of his life. Only a few months ago he published a vigorous and well considered History of England. Now we have on our table an octavo volume of Shakespeare criticism, in which he has searched the texts of the plays for indications of the poet's personal qualities and con-

victions. "Shakespeare the Man" (Fisher Unwin) is a noteworthy and very attractive volume, which will impress the reader more deeply than ever with a sense of Mr. Goldwin Smith's literary versatility.

\* \* \*

DR. R. W. FORSYTH writes to us from the Royal College of Science that he has undertaken the duties of Reporter for the Physical Society of London, and sends us reports of the meetings of the Society of March 2 and March 23. We regret that we have not sufficient space for the publication of these valuable notes on the progress of physical science, for which we must refer our readers to the pages of our scientific contemporaries.

\* \* \*

WE take this opportunity of acknowledging the contributions which occasionally reach us from mathematical correspondents—apparently under the impression that the *Educational Times* has unlimited space to devote to the interests of mathematics. Alas, it is not so! From time immemorial we have found room for a *palestra* in which the great wits of pure mathematics have wrestled with each other over problems which, it may be supposed, have been caviare to the general reader. But we are compelled to draw a line which excludes correspondence on mathematical subjects, lest, as happens now and then in an ill regulated school, τὰ ἐν παλαίστρᾳ should encroach too much on the γράμματα and the μουσική.

\* \* \*

THE trustees of the Liberal Memorial Fund, after providing for the Gladstone statue in the central lobby of the Houses of Parliament, have been able to establish an annual "Gladstone Essay Prize" of the value of £10 at each of the Universities of Oxford, Cambridge, and London, and of the value of £5 each at the University Colleges of Birmingham, Bristol, Leeds, Liverpool, Manchester, University College, Bedford College, and King's College, London, Newcastle-on-Tyne (Durham Science College), Nottingham, Sheffield, Aberystwyth, Bangor, and Cardiff, and also at St. Andrews, Glasgow, Aberdeen, and Edinburgh Universities, and Dundee University College.

\* \* \*

MR. FISHER UNWIN announces an important contribution to the history of Wales. We wrote quite recently in these columns that there was room and demand for a more systematic treatment of Welsh history. "The Welsh People: their Origin, Language, and History," consists of extracts from the Report of the Royal Commission on Land in Wales and Monmouthshire. It is edited, with additions, notes, and appendices, by Dr. John Rhys, Principal of Jesus College and Professor of Celtic in the University of Oxford, and Mr. David Brynmor Jones, Q.C., M.P.

\* \* \*

A NEW edition of "Gray's Letters," in three or four volumes, is to be published by Messrs. Bell & Sons. The Rev. Duncan Tovey, sometime Clark Lecturer at Trinity College, Cambridge, has undertaken the responsibility of editing the collection, which will be fuller than any which has yet appeared, and will include several letters that have only lately been brought to light. The whole of the correspondence between Gray and Mason will be included.

\* \* \*

MESSRS. PEARSON are making arrangements for a number of volumes dealing with the leading nations of the world, and entitled the "Great Peoples Series." The general editorship has been undertaken by Prof. F. York Powell, who aims at placing before the public a concise and interesting history of each of the great peoples. Volume I. will be "The French," by Mr. Arthur Hassall.

BRADFIELD COLLEGE celebrates its jubilee this year, having been founded in 1850. The *Athenæum* says that a history of the school up to the present time is being prepared by Mr. A. F. Leach, of the Charity Commission.

## COLLEGE OF PRECEPTORS.

## DISTRIBUTION OF DIPLOMAS, PRIZES, AND CERTIFICATES.

THE public distribution of Diplomas, Prizes, and Certificates to the successful candidates at the last Christmas Examinations took place at the College, Bloomsbury Square, on March 21. The Chair was occupied by Mr. H. WESTON EVE, the Dean of the College, who was supported on the platform by Dr. Wormell, Vice-President; Mr. E. Pinches, Treasurer; Rev. F. Besant, Rev. J. O. Bevan, Mr. Charles, Dr. F. E. Gladstone, Mr. Hagreen, Prof. T. R. Jones, Mr. Langler, Dr. Lawrence, Mr. Musson, Mr. Milner-Barry, Rev. J. E. Symms, Rev. R. O. T. Thorpe, Rev. J. Twentyman, and others.

The CHAIRMAN said:

I cannot open these proceedings without stopping one moment to pay a tribute to a very distinguished member of our Council and of this College who has passed away from us in the last few months—I mean Mr. Charles Peter Mason, who was one of the most distinguished private schoolmasters of his time, and a very loyal supporter of this College, and who is known to the world and probably to many of you as one of the men who first organized in this country that very important element of education, the teaching of our own language. It so happens that the present moment is marked by two very important educational events—one is the thanksgiving at St. Paul's which takes place in a few days to commemorate the jubilee of the foundation of the Frances Mary Buss Schools. The late Miss Buss was for many years a member of our Council, and rendered us very valuable services. I may, perhaps, remind you that even in her last days she was not forgetful of this College, and left us a small legacy. To her is owing one of the greatest movements of the second half of the century. She was the first, I think, who took seriously in hand—at least in such a way as to impress the public—the improved education of girls. I am sure that, when the day comes to celebrate the jubilee of the commencement of her undertaking, there will be many thousands of "old girls"—I believe that is the proper term to use—scattered over the country, who will remember with gratitude the benefit which her initiative has conferred upon them.

The other important educational event is the coming into operation of the Board of Education Act, which takes place, I think, on a somewhat ill-omened day—the first of April. I trust that there will not be associated with that Act the same results that we are accustomed to link with that memorable day. I believe that it is an Act for which public opinion was thoroughly ripe, and which, if carried out with wisdom and discretion, will produce a very marked improvement in our education generally. The obvious results that we have to anticipate from it are: first, it will, it is to be hoped, secure two reforms for which this College has for many years very earnestly pressed, the efficient registration of schools and of teachers and the training of teachers; secondly, it will stimulate—though I hope not unduly stimulate—the inspection of schools. The inspection of schools is valuable for two reasons—first, it is a good thing to see ourselves as others see us; and, next, it is impossible that an intelligent man can go from school to school without, like the honey bee, collecting good ideas and handing them on to others. Lastly, we anticipate a result which, if I call it a good one, you may say involves a paradox. The working of the Act will probably tend to make some of our teaching more mechanical. The word "mechanical" may be used in a good many different ways. Some of the peasants in the more backward parts of Europe, who are still using the same wooden plough that you remember in the "Georgics," are doing their work in a very mechanical way; on the other hand, the skilled artisan, who is helping in some complicated manufacture, or carrying out some great engineering work, also does his work in a mechanical way. But there is a very great difference between the mechanical way of the peasant and that of the skilled artisan. I have noticed in myself and in other people that one is too apt in teaching not to think where one is going—to drift on just as the spirit moves one. I sometimes feel inclined when I come across such teaching to quote two lines of Wordsworth—

Me this unchartered freedom tires,  
I feel the weight of chance desires.

Now what I trust we shall get by the gradual operation of good inspection, and the training of teachers, is that in secondary

schools, as is already the case in primary schools, the best methods of doing the simpler elements of teaching will be more rigorously laid down and more carefully carried out. If a teacher starts from such a foundation, he will then, when he lets himself go, be able to do far more by following his own devices than if he follows his own devices from the very beginning without any such guidance. The person who sets to work to teach by the light of Nature has probably little to guide him but the experience he gained when he was a boy or girl at school, and the people who taught him at school had, perhaps, little but what they could gain from their teachers; and so, unless some step is taken to spread knowledge of the best methods, there is a danger of our lapsing into the state of things which Horace describes—

Ætas parentum pejor avis tulit  
Nos nequiores, mox daturos  
Progeniem vitiosiorum.

Of course this has not been altogether the case; I am only putting in an extreme way the danger which arises from the absence of machinery for spreading good traditions and good methods of teaching. Therefore I still stick to my paradox that we may gain something if a little more of the mechanical element is introduced into our secondary teaching.

I am afraid I have occupied too long with these general dissertations. I now come to the most important part of my talk, and that is to offer my hearty congratulations to the boys and girls who have won prizes. Looking back upon my own school-days, I know what a satisfaction it was to me to win prizes, and I have no reason to think that, though the present generation, and especially, I believe, the young ladies, have the credit of being much in advance of what their fathers and grandfathers were at their age, they have ceased to feel a hearty pleasure in winning their prizes. I shall not, as I have known some speakers do, rather condole with them than congratulate them. My observation of a good many years leads me to think that, on the whole, the boys who do best at school and at college, if they do not always carry off the great prizes in after life, yet do, as a general rule, rise to useful and honourable stations in the world. They have taken the first step. They have shown, as a general rule, some of the qualities that conduce to making good and useful men and women. They have learned something of method. They have generally sound minds in sound bodies, they have learned some of the principles of self-denial, and occasionally, but not, I hope, always, prefer work to play. Remember, too, that there are few more generous rivalries in after life than those which exist between boys and girls who are fighting for a prize.

Perhaps you will expect me, as I have started on this line, to say one or two words as to what you ought to carry away from school. I will put first what is important, but not so important as some other things—a habit of accuracy. Boys and girls do not always realize what a part accuracy plays in the world. Take an example which is very familiar to us just now—the power of sending a shot or shell into an area not much bigger than the square outside—I might say, not much bigger than this room—and that from a distance of several miles. Just think what a number of people must each of them have carried out with perfect accuracy the piece of work assigned to them. Picture to yourselves, again, some great engineering work like the great dam now being made on the Nile, or the Forth Bridge, that had to be put up bit by bit. You have there an admirable illustration of that rigorous accuracy which modern science has gradually learned. Therefore, every boy or girl who is trying to acquire habits of method and accuracy at school is so far fitting himself or herself to play a useful part in the great work of the world, and the work of the world is a machine that gets every day more and more complicated, and calls more and more upon every man and woman to do fully his own proper part in it. A short time ago I had an opportunity of looking over some reports from examiners on the work of a recent examination, and, as might be expected, there were some commendations of good and accurate work, and some fault found with a considerable want of it. There is one subject in particular in which accuracy seemed to be at a very low ebb—that is, the subject of Latin. I am not going to preach that Latin is the all in all in education. The day for that is long passed. For myself, I believe that Greek is a more valuable language to learn, and is at least as good a discipline. I also believe that, unless you can carry classical studies to a fairly advanced point, you will get both more discipline and more permanent benefit out of modern languages. But, for all that, Latin still remains an admirable discipline, and there are few people

who, when they grow older, would not be sorry if they had not learned any Latin at all. What I want to impress upon you is that, if Latin is to be learned, it ought to be learned well, and that the rather disagreeable drudgery of mastering the grammar must be resolutely faced. Latin grammar is not in itself a delightful subject, but without it you cannot possibly make out the sense of a Latin author, unless, indeed, you go to work in that most mean and miserable way—trying to learn a “crib” by heart. So much for accuracy. But there is another much higher thing that you should take away from school, and that is, love of books or of science, or of both. I sometimes fancy that we schoolmasters might do even more than we do to stimulate that love of books. The habit in English schools of reading very minutely small portions of authors, valuable as it is, does not always conduce to a habit of wide reading. I have noticed that French boys of sixteen or seventeen have read in classics far more widely than English boys of their age, though they are not probably as accurate; and one of our great problems in education is to combine with some very careful reading a wider range than is at present often realized in schools. Above all, our business as teachers is to encourage as much as ever we can the study of our own literature. The other day I was looking through the regulations for Prussian secondary education, and from beginning to end the key-note is—how will this study bear on a knowledge of the German language and German literature and the greatness of the German nation? I think we Englishmen cannot do too much to set before us as one of the ends and aims of education the due appreciation of what is probably the greatest literature in the world since the Greek and a legitimate pride in the greatest country and noblest type of government that the world has ever seen,—

A land of settled government,  
A land of just and old renown,  
Where freedom slowly broadens down  
From precedent to precedent.

Lastly, there is one more result that you should take away from school still more important than either of the other two, and that is, training in character. In many ways the modern conditions of all good schools differ from the conditions of a good many years ago. In one way, perhaps, they are a little less favourable to the formation of character, because boys and girls are better looked after than they used to be, and, therefore, though there is less chance of going wrong, there is perhaps a little less chance of forming the stronger and nobler types of character. But there is still plenty of room, even in the best organized school, for laying the foundation of that kind of character which will carry a man or woman safely through the difficulties of the world. After all, masters and mistresses cannot do everything, and one of the most valuable features of English schools—I am glad to say, as much of girls' schools as of boys' schools—is the way in which a common life is inculcated; boys and girls learn the way to give and take, to get over their natural selfishness, and to feel that they must live for others. I am afraid this is a little bit like a sermon, but after having preached the intellectual side I think it is right to impress upon you that there is a higher side of school life even than the intellectual.

The Diplomas, Prizes, and Certificates were then distributed, after which Dr. WORMELL said it was his pleasing duty to move a hearty vote of thanks to the Chairman for his useful and interesting address. He felt that he had undergone a kind of promotion. When the first boy of the class was asked temporarily to take the master's chair, the second moved into the place of the first, and the Bard of Avon had led them to expect under these circumstances that the proud second “dressed in a little brief authority” will play “fantastic tricks before high heaven.” But he could assure them he should endeavour to perform his brief task with the decorum and discretion that were shown on occasions when the task was in the hands of the Dean, for he was sure that this vote was never moved more heartily than it was now, and never with feelings further removed from mere formality; it had never been more worthily bestowed, nor upon one who had gained a better title to their thanks. It was not possible to limit their indebtedness to Mr. Eve to the services rendered that day; throughout an active lifetime he had consistently advocated higher culture upon rational and progressive lines, and as Dean of the College he had always laboured assiduously and with great tact to make the examinations more useful and to preserve their

quality. Although it might be true, as Shakespeare made Ulysses say, that

Time hath, my lord, a wallet at his back  
Wherein he puts alms for Oblivion  
A great-sized monster of ingratitude:  
Those scraps are good deeds past; which are devoured  
As fast as they are made, forgot as soon  
As done;

yet their memory of the indebtedness of education to Mr. Eve, and the indebtedness of the College, was so deeply written that time's wallet could not obliterate it. There were not many who could undertake the post of Dean. Just think of the examiners! His duty was to bring those examiners into line—they were an obstinate class of men—yet he did his work with such gentle courtesy that they could not be offended, and, at the same time, with such firmness that he always had his way. Then there were the teachers. Their popular constitution gave the teachers the right and the opportunity of making suggestions for improvement, and there was no suggestion that was ever seriously made but was carefully considered by the Dean. Then there were the disappointed ones, those who, perhaps, in spite of honest endeavour, had not reached the level of merit which justified the receipt of a certificate or a diploma, and, as a rule, it was only natural that they should think the examinations were at fault. He did not know at all how the Dean managed to soothe them all, but he was quite sure that he succeeded. He felt particularly pleased to see the Dean occupy the chair that day, because he had always been of opinion that the College ought to be more self-contained than it was. He did not think it necessary always to run about and beg and pray some outsider to take the post of honour. At times, no doubt, it was useful, when there were burning questions to the front, to invite a man of light and leading to give his opinion upon those questions, but, as a rule, they need not go outside, for there were many members of the College who could very well perform the functions of distributing prizes. Therefore, he did hope that this would not be the last time by many that they would be favoured by seeing the Dean in the chair. He was glad to see that the Dean had put the work of Miss Buss before the initiation of the work of the Board of Education Act. He conceived that it was a matter of greater importance. With regard to the work of the Board, he was not afraid at all of the first of April—its work would not be regulated by “Carlyle's majority.”

The Rev. J. O. BEVAN, in seconding the vote of thanks, said that upon the last occasion they had a bishop in the chair; now they had a dean, and, as there seemed to be such a suspicion of semi-clerical atmosphere about, it might not be unfitting for a poor priest to second the vote of thanks. Occasionally it might be necessary to go outside the College to procure a chairman to preside on occasions like the present; but he was convinced they could not have obtained a better chairman than Mr. Eve. As there was a power behind the throne which controlled the proceedings of government, so it was with reference to the examiners. There was a power even behind them, and the realization of that power had been brought forward by Dr. Wormell. With regard to the address to which they had listened, he thought it was one which ought not only to be listened to, but should be read. Speakers might be divided into different classes. There were some with regard to whom it might be said that it was known what their subject would be; but the Dean was not a man of this sort—they were not always certain as to what view he would take upon certain subjects. As to the remarks about the ill-omened day when that Bill was to come into force, he might relieve Dr. Wormell and the Dean from any misgiving on that point by stating that the first of April would be a Sunday, and, this being a *dies non*, the Bill would not come into force until the second. The Chairman had referred to the value of accuracy, and he might have touched more particularly on the special need of accuracy in the subject of Euclid, for which he (the speaker), as an examiner, was more immediately responsible.

The vote of thanks having been passed by acclamation, the CHAIRMAN, in reply, said: I feel very much the extreme kindness of Dr. Wormell in moving this vote, and of Mr. Bevan in seconding it. I can only say that I wish I deserved half the compliments that have been paid me. It must be a privilege for candidates for the examinations to see their examiners “spirit to spirit, ghost to ghost.” When you get home go to your Tennyson, and look up the passage.

## SCHOOL MAPS.

At the Monthly Meeting of members of the College of Preceptors, held on Friday, March 16, Dr. J. SCOTT-KELTIE in the Chair, Mr. H. O. ARNOLD-FORSTER, M.P., read a lecture on "School Maps: What they are and what they ought to be."

Mr. Arnold-Forster said it would be agreed that the teaching of geography in this country was lamentably behindhand. What was said on this subject by the Royal Geographical Society in 1886 was, to a large extent, true to-day, and, in the interval that had elapsed, they had not made the progress that might fairly have been expected in geographical teaching. To show the state of things existing fourteen years ago, he read several extracts from the Report of the Geographical Society of that date.

The chief difficulty which confronted any one who desired to produce a good map was the apparent inability of most of the persons concerned to discriminate between a good and a bad one. He had found that the general method of estimating a school atlas which was in favour throughout the country was to make a sort of equation between its weight *avoirdupois* and the smallness of its cost, and, when it was discovered how little they had to pay and how much it weighed, and also the amount of colour they could get, they attained their ideal of what a good atlas should be. It was because he had been compelled to realize the truth of this that he was anxious now to appeal to the members of the College of Preceptors to help in getting over the dead weight of incapacity, and arriving at an understanding of what was really desirable. Until there was a demand on the part of teachers of geography for that which was scientific and correct, those concerned in the production of maps might waste their money and their energies, and little or no progress would be made. It could not be denied that there had been considerable improvement of late years, and that, through the efforts of the Royal Geographical Society and other educational bodies, there had arisen in this country a body of persons who were doing their best to quicken the educational conscience with regard to the teaching of geography; but these efforts had not yet been so successful as he should like to see them. In July, 1897, the Teachers' Guild issued a leaflet, in which they laid down what were considered to be the essentials of a good school atlas, and he desired to acknowledge how much he had been assisted by this leaflet in forming the ideals which he had tried to put into practical shape. He had also received a great deal of assistance from the Geographical Association, which had been good enough to nominate two gentlemen, very well known in the geographical world, to give him the benefit of their assistance and advice.

In compiling a school atlas, the first difficulty he met with was to know what to leave out. The tendency had been, with regard to a school atlas, to ignore the fact that you could not put everything into it. In dealing with the English elementary schools, it was necessary to remember that they had to consider the time and the pockets of the scholars or their parents, and one of his guiding principles had been to include as much as possible without detriment to the subject. In the first place, it was obvious that a school atlas should be scientifically accurate, a quality which did not always characterize the books which were in use in the schools at the present day. Therefore, he would start by saying that scientific accuracy should be an absolute *sine qua non*, to which he would add that the execution of the maps must be such as to attract and not to repel the child; so that among the undesirable qualities he would place the inartistic production of maps, which offended the taste of a qualified observer, and failed to interest the child who was using them. Then, again, they should be sufficiently full for the purposes of general instruction in the class-room; but it was important to point out that it must not be attempted to construct school atlases to be used as reference atlases. They should not expect to find on a school atlas every place that was mentioned in the daily papers; if they attempted to do that, they would most certainly fail, because the atlas would be so overcrowded that it would become obscure and unintelligible. Therefore, in his opinion, it was only necessary to include all the names which a teacher engaged in the everyday work of teaching in an elementary school had a right to expect to find in the atlas. It would be a mistake to leave out of maps names which were undoubtedly connected with the history of this country or such general history as the pupils were supposed to learn. In the maps which he had prepared would be found a considerable number of places which, from a geographical point of view, were not legitimately included in maps of this kind. For instance, there would be found the battlefields of our country, and also certain battlefields which were memorable in the history of the world, though not particularly associated with the history of this country. Of course a place like Crecy had little geographical signification, but he thought it would be very undesirable that a teacher having only one book to use should not be able to ask his pupil to point it out on the map. In putting in such names as this he admitted that he departed from his ideal of making it a purely geographical map. He only referred to this apologetically, because, although he felt there was an intimate connexion between geography and history, the historical aspect should not be a predominant feature in the teaching of geography.

Geography divided itself naturally into political and physical geography, and he did not think these separate branches could be taught satisfactorily from one map. It had been his aim to separate these two kinds of maps altogether, because a confusion arose from attempting to combine the two. In his own maps it would be found that there were both a physical and a political representation of all the countries represented in the atlas. For the purpose of preparing his maps he had visited Switzerland to see the excellent work done at the Institute at Berne, and he had been to Germany and other countries to see what they did. We lived in a country that had a larger coast line for its area than any other country in the world, and there was no important town in the country that was more than fifty miles from the sea or an arm of the sea. Therefore, he thought fit to incorporate in the atlas one example of sea mapping in the shape of an Admiralty chart. Although he did not expect school-children to take the soundings of Portsmouth Harbour, he thought they should understand the great difference that existed between the treatment of sea mapping and land mapping. Again, it was absolutely essential that British children when looking at the maps should be able to realize in the clearest manner the great country they belonged to, and therefore the portraying of the British Empire was a very important part of the work. He had tried to correct the natural failure in the child's mind to see things in their due proportion, and had represented the whole of the component parts of the Empire on one uniform scale, so that they might see at a glance, for instance, the enormous extent of Canada and the relative insignificance of the British Islands compared with the great tracts of the earth's surface which they controlled.

His experience was that children were apt to regard maps as things not very intimately connected with their own experience, and he had, therefore, endeavoured to familiarize children with the meaning of a map by introducing them at the outset to a series of diagrams which would enable their imaginations to pass from the actual physical appearance of the country as it presented itself to their eyes and the representation of the country on the map. To this end he had been greatly assisted by the Ordnance Survey. He had also given a local map—that is, a map of London and the environs. He thought it was important that children going out, as they did, upon expeditions, school treats, and so forth, should when they came back be able to point out on the map the place that they had been to. It had often been said that in order to understand geography at all one must travel. He quite agreed with that; but they could not all travel, or, at any rate, only to a very small extent, and for those who could not it was necessary to give some representation of the features of the country with which they were familiar. Another question that might not perhaps interest them very much was the question of the spelling of the names. Any one who had had anything to do with the preparation of maps would be aware that the spelling of names was one of the great problems that had to be dealt with. There was no canon of geographical spelling, and one had really to go very much as he thought best. The Asiatic Society had a canon of geographical spelling for Asiatic names which he thought was rather a hard doctrine. No doubt it was very good to spell Luknau, and to follow the Asiatic spelling throughout the Asiatic map, but he was quite certain that children coming across these unfamiliar spellings would be unaware that they were dealing with old friends. He had tried to give a familiar spelling, so that a child might look at the map, and know what the places were. Further than that, he thought they ought to teach children, at the very earliest stage possible, the real names of places. We had got familiar with the names of places which had become Anglicized, such as Leghorn (Livorno), which was inconceivable to an Italian. It was misleading the children to call places known all over the Continent by names absolutely unfamiliar to the people who lived in those places. Therefore, he had adopted the expedient, in every case where there was any great variation between the accepted name in this country and the actual name of the place, of putting in two names. This had landed him in some difficulty, because, in Switzerland there were three forms—one, the form which we were pleased to use; another, the German form; and a third, the French form—and he had put in all three names. He also advocated the addition of the accents; otherwise a child would not be able to pronounce the name correctly. These were some of the principles which had guided him in producing his maps. He had endeavoured in every case to give the child some idea of the scale of the map. Taking the map of Africa, for instance, they would find the whole of the European continent introduced, and in a moment they would be able to see the proportion between those small European countries which dominated these enormous expanses of African territory; and this in itself was a lesson in political geography which was very well worth teaching, and very important, if people could be made to comprehend it.

He had not attempted to deal with geological and commercial maps. He found that in the prospectus of the Teachers' Guild they suggested the teaching of geology and commercial facts on a map; but he considered this was outside the scope of any ordinary map. At any rate, it was outside the possible limits of an elementary school map. Though geology was a very delightful and interesting subject, it was not one which should be taught in elementary schools. Then, with regard to the indication of elevations, from the Ordnance Survey map it would

be seen that there was a method of expressing elevation adopted in which colour was used in combination with contour lines. Now, if they were to look at his maps, it would be seen that he had reversed the method of treatment, and put the dark colouring where the light colouring was. This was not a very material point, but he thought it was a more artistic way of treating the subject. While speaking of the Ordnance Survey maps, he would like to say that he thought in them we had something to be proud of; but he regretted that the arrangements for selling and distributing them were very unsatisfactory, and he looked forward to the time when these maps would be in every one's hands. He had come there that evening not only to put his views before the meeting, but to receive their suggestions; and in doing so he would warn them not to put their ideals too low. He most strongly objected to the system which was prevalent, though quite in accordance with some interpretation or misinterpretation of the Code, of doling out the teaching of geography in homœopathic doses during each particular term of the child's school life. He saw no advantage in putting into a child's hands during six months of the year a little book which dealt, for instance, with the geography of Ireland and the tidal currents, or another which dealt with the United Kingdom, India, and the wind currents. For teaching purposes it might be necessary to divide the subject into as much as they could get their pupils to assimilate in a particular time. The whole value of an atlas depended upon its being comprehensive. It was necessary for a child to have the power of comparison and of examining one map alongside of another, and also the power of realizing the meaning of school maps.

All these things together went to teach a child geography, and to give a grown man an interest in the study; and he protested against people putting their ideals too low and saying that, because you cannot imagine a child in the First or the Second Standard finding an intellectual use for the whole atlas, that was any reason you should not put it into his hands. He had gone through the syllabus of geographical teaching of the Sheffield School Board, which was founded on the Code, and adapted to the successive standards, and he was able to demonstrate that the whole subject-matter of the syllabus, from the First Standard to the last, was illustrated by his particular atlas, and that there was absolutely no advantage to be gained by giving a child in the First Standard only the particular atlas illustrations which were appropriate to that standard, to the Second Standard what was appropriate to that, and so on up to the Seventh Standard. There was here no saving of money. On the contrary, there was great gain by adopting the contrary process of putting into the hands of the child, during his school life, the whole of the geographical information that it was proposed to make his during his stay in the school. With regard to the form of map which, in his opinion, should not be adopted, there were some faults which were common to all, and which were very serious departures from scientific methods. For instance, it would be seen in many of the specimens exhibited that there was an absolute failure to carry out the map to the extreme verge of the page. That was a very vital principle. Taking the map of Italy, which was his *bête noire*, in some of the atlases it would be found that Italy was represented as a peninsula bounded on the north by the Sahara, on the east by the Sahara, and across the Mediterranean Sea again by the Sahara. There were four white places found in that map. By this method they absolutely failed to teach any of the elementary facts of the geography of Italy. The whole geographical history was gone, the political history was gone, the Alps were gone, and the consequences of that environment of mountains was eliminated from their view. In some maps there was also a great excess of colouring for political divisions, which was confusing, and, in most cases, absolutely useless, to the child; and, lastly, there was a great overcrowding of the maps, which would be condemned by all those who had any regard for the eyesight of the child, or any love for precision and clearness in the production of a map.

Mr. Arnold-Forster concluded by inviting criticisms on the maps which he had exhibited, and which had been in the hands of the audience during the lecture.

Mr. EVE explained that Mr. L. W. Lyde was unable to be present at the meeting; but he had expressed in writing his views as to some of the desiderata in making maps for the use of school-children. Physical and political maps should be printed side by side. Heights should be indicated by colour, not by contour. The snow-line should be clearly shown, and, if possible, the green shade should exhibit the whole range of ordinary cultivation. There should be a minimum of names, and in the physical maps these might be indicated by initial letters only. The atlas should on no account be unwieldy, and should not cost more than half a crown. Every map should have an inset of England on its own scale. Astronomical maps were unnecessary; but three or four good climatic maps should be included. There should also be an index containing every name that appeared in the maps, and illustrations of typical animals and plants of each district. Railways should be

marked only in the political maps. Mr. EVE, after pointing out that in many respects Mr. Lyde was in agreement with Mr. Arnold-Forster, went on to observe that some improvement might be effected in isothermal maps if different colours were used to denote different degrees of average temperature for the whole year, and some other means were adopted of indicating on the same map whether the climate was an extreme one or an equable one. All maps should have bold outlines, and the number of names should be cut down as much as possible. Mr. Arnold-Forster advocated the placing in the hands of school-children of an atlas which should serve for their entire school career; but this course was rendered difficult by the tendency of children to soil and damage their books. There was therefore much to be said in favour of providing small books intended for one term's work.

Mr. LANGLER remarked that, while it was important that a reference atlas should contain as many names as possible, in maps for school use the principle of selection insisted upon by Mr. Arnold-Forster should be largely used, and names of minor importance should be omitted. He was glad to say that some improvement in this direction had taken place in recent years. He should also like to insist on the desirability of a correspondence between the names shown in text-books and the names printed in the atlas. Every name shown in the former should appear in the latter. The insertion in every school map of a scale of comparison with some known unit would increase the usefulness of the map.

Mr. WILSON considered that a good school map should show on its surface as much information as to the operations of the human race during historic time, and of Nature during the geological ages, as could be put upon it without overcrowding. Mr. Arnold-Forster had expressed his opinion that geology ought not to come into play at all in the teaching of geography; but it seemed desirable that, in a lesson on geography, constant reference should be made to the bearing of geological facts on the questions dealt with. For instance, it was impossible to get a thorough knowledge of the migration of population, or of the flora and fauna of a country, without knowing something of the geological structure of the rocks and the soils produced by their decomposition, and, accordingly, a geological map should always be used in connexion with ordinary maps. It was important that children should be taught to understand the meaning of maps; and, for this purpose, a teacher might usefully explain, by means of models, the construction of maps and the difference between Mercator's and other projections.

Mr. CHISHOLM remarked that considerable progress had been made in geographical education in this country since the issue, some fourteen years ago, of Dr. Scott Keltie's Report, which had been referred to by Mr. Arnold-Forster. The institution of Chairs of Geography at the Universities had greatly influenced this progress, but much remained to be done before England could attain to the position already reached by Germany in this respect. Maps of the kind submitted by Mr. Arnold-Forster, if they could be procured at moderate cost, would materially assist the improvement of geographical study. He agreed with what Mr. Arnold-Forster had said as to the general principles that should be adhered to in drawing up a school atlas, but he did not think it necessary to have the physical and political features entirely separated one from the other. It would be undesirable to have political maps giving no ideas of the physical features at all. For instance, in studying the geography of India, it was not only necessary for the child to learn the position of Bombay, but he must understand also that it is backed by mountains which not long ago separated it from the enormous hinterland which has made it the seaport it now is. Again, Sydney, the capital of New South Wales, suffered from being cut off in the same way by a series of mountains; and this should be shown on the map. The child could be made to understand how the mountains had a very important effect on the history of the colony. He was glad to see, however, that the maps handed round seemed suitable for their purpose. As to the spelling of names, he thought Mr. Arnold-Forster's remarks were entirely sound. Two of the suggestions communicated by Mr. Lyde were especially interesting and valuable. Some climatic maps were absolutely essential; and it was certainly desirable that highlands should not be merely indicated, but that certain shades of colour should be used to indicate definite selected elevations.

Mr. MASTERMAN contended that at least one geological map should be included in every elementary atlas. The older rocks should be indicated by one colour and the newer ones by another.

The CHAIRMAN said that geographical education had made no small progress of late years, and the fact that there were Professors of Geography at Oxford and Cambridge was a proof that geography was gradually achieving a position in this country which would in time be quite equal to that which it held in Germany. The great drawback was the inefficiency of the teaching. Mr. Wilson had advocated the introduction into school maps of a number of details which in his (the Chairman's) opinion would more suitably be looked for in the School of Geography at Oxford. Mr. Arnold-Forster's remarks applied only to elementary maps, and he had set forth certain principles which should govern the construction of such maps. All maps should be characterized (1) by clearness and legibility, (2) by a principle of selection of details,

only the more important ones being shown, and (3) by attractive appearance.

The Lecturer briefly replied, and the usual votes of thanks concluded the meeting.

## REVIEWS.

### LITERARY HANDBOOKS.

(1) "Short Histories of the Literatures of the World." Edited by Edmund Gosse, LL.D.—*A History of Russian Literature*. By K. Waliszewski. (Heinemann.) (2) "Periods of European Literature." Edited by Prof. Saintsbury.—*The Romantic Triumph*. By T. S. Omond, M.A. (Blackwood.)

(1) Sixty years ago few would have cared to maintain that there was anything which deserved the name of a Russian literature. A few journalists, a few pioneers of political inquiry, a little verse, and a little artless fiction of the domestic order accounted for most of the secular output of the Russian press. Then the stimulating influence of German philosophy and ideals, which did so much to open up new vistas in English and American thought, and which had already given rise in Russia to a mystic kind of nationalism, and to the fateful Panslavonian theory, began to yield a harvest of more purely literary achievement. After periods known to Russians as those of national evolution and emancipation—after a transition in which Karamzine and Joukovski, Kryloff and Pouchkine were the most conspicuous names—we come almost suddenly on the pleiads of Lermontoff, Gogol, and Tourguenief, of Dostoevski and Tolstoi. All these are more or less familiar to us, owing to the study of Russian language and letters by the Western nations and the industry of translators. Later Russian novels are full of gloom and mysticism, tragedy and fatality, passion and crime and despair. Mr. Waliszewski estimates the reputation of his countrymen, and analyses many of their plots. If it were not for the actuality and variety thus given to his text, it would strike an ordinary reader as ponderous and vague. But at all times it is characteristically Russian in its outlook and point of view—never more so than when he deals with what he takes to be the typical qualities of his race. Here, for instance, he is commenting on a speech of Dostoevski, in 1880, at the dedication of a monument to Pouchkine:—

The new "elect nation," called to realize the kingdom of God on earth—because she does not isolate herself proudly within herself, because she is disposed to see a brother in every foreigner, and an unfortunate, rather than a malefactor, in the greatest criminal, because she alone incarnates the Christian idea of love and forgiveness—the heiress presumptive of the tribe of Judah, as described in Dostoevski's speech, simply belongs to that cycle of Messianic ideas in which the theory of Panslavism has become finally merged. Yet on one point the orator accentuated his disagreement with the Slavophiles, by extolling that national gift for assimilating foreign culture whereby the Russian had succeeded, or was to succeed, in realizing that type of "universal man," who has since become the object of a good deal of joke, but who, at that moment, thanks to Dostoevski's burning words, evoked a transport of enthusiasm.

(2) Mr. Omond's pleasantly discursive volume aims at presenting a general picture, "preferring broad outlines to finished studies," and making less of biography and bibliography than of the displayed features of the romantic triumph. The subject is fascinating, and has an interest involved in the mere recital of facts, apart from any allurements of style or presentation. But Mr. Omond is equal to his opportunity—which, indeed, is not to account for what is known as the Romantic revival or revolt, since that task has been assigned to Prof. Vaughan in another volume of the same series. The author of the present volume is almost too modest in his disavowals and disclaimers; but the main thing is secured when he recognizes that the "Romantic triumph" implies a return from eighteenth-century formalism and literary deportment to actuality, sincerity, sympathy with the warmer moods of human nature, and the knowledge of men and women from within, as well as from without.

We cannot follow the subject in detail; it must be enough to say that Mr. Omond's readers will find themselves easily led through an attractive field. His treatment of Coleridge is fine on the whole; but there is one passage in regard to which we must slightly demur to his inference. The thought of Coleridge, he truly says, did not create a school, but it passed into the very heart of his age.

The heart, even more than the intellect, of the rising generation became Coleridgean. From him comes most that is strong in modern

idealism; from him much that is weak in our philosophy and religion. The banalities of the pulpit derive from him, as well as its freedom. The common division between faith and knowledge, reason and understanding, the intellect and the heart—division exemplified even by Tennyson when he tells how

"A warmth within the breast would melt  
The freezing reason's colder part,  
And like a man in wrath the heart  
Stood up and answer'd: *I have felt*"—

this dangerous division comes direct from Coleridge. Dangerous, indeed! For the soul of man is not built in water-tight compartments, like Faraday's knowledge, and, if one faculty can mislead, we have no security that another may not.

"No security," of course; but does Mr. Omond deny the possibility? Is it not possible for the same man to act in successive moments with the faculty of reason and with something which impulsively sets reason aside? Tennyson calls this something "a warmth within the breast," and it is, in fact, an *ensemble* of conviction—a reserve of previous reasoning, perhaps, but combined with sensuous sympathies, and summoned by the will to confute what may be only a fallacious deduction of the mind. Where is the "dangerous division," if we only understand our terms?

### LAWS OF THOUGHT.

*Logic*. By St. George Stock, M.A. Pembroke College, Oxford. (Oxford: B. H. Blackwell.)

This is the kind of text-book that students love, for it contains the whole subject in the small compass of four hundred small octavo pages. It is a kind of Liebig's, or rather St. George Stock's, concentrated essence of logic. That this description is no exaggeration will be seen on reading the list of writers on the subject to whom the author acknowledges indebtedness. He has boiled down portions of the following works, favouring the whole with some good pinches of Aristotle:—the works of Archbishop Whately, Mills, and Hamilton, Prof. Jevons' "Lessons," McCosh's "Discursive Laws," Thomson's "Laws of Thought," and the books of Bain, Jevons, Bradley, Walker, Ray, and Weatherley. The gist of each argument, the pith of each classification, the core of each discrimination, used by these writers is to be found somewhere, and to some extent, within these pages. It is necessary in such a compendious text-book that much shall be introduced abruptly and dogmatically, for there is no space or time for introductory preparations. For students working with a tutor this methodical summarizing of the materials will be found very useful, but for the private student it would need to be supplemented by wider reading. For the benefit of such there might have been some guidance as to this reading, as, for instance, "Here read chapter iv. of Thomson, 'Laws of Thought'; or 'Here read such a chapter of Mill.'"

The methods adopted throughout are strictly deductive. For instance, the meanings of terms are usually arrived at by first taking them in their widest sense, and then cutting away the colloquial or metaphorical meanings which are not used in the science, gradually developing the exact and limited scientific connotation. A good example of the general method is the fixing of the meaning of the word "laws" in the phrase "laws of thought."

The word "law" is so ambiguous that it will be well to determine more precisely in what sense it is here used. We talk of the "laws of the land" and of the "laws of Nature." A law in the political sense is a command imposed by a superior upon an inferior, and sanctioned by a penalty for disobedience; but by the "laws of Nature" are meant merely certain uniformities among natural phenomena.

These differences are then fully discussed, and the following definition is finally deduced:—

The laws of thought in their ultimate expression are certain uniformities which invariably hold among mental phenomena and so far resemble the laws of Nature; but in appearance they may be violated, owing to error, as the laws of the land may be violated by crime.

This method of starting with the widest possible view and then narrowing it to what is required is applied in every part. For example, the discussion of mood and figure begins by counting all the possible ways of varying the terms of propositions which had previously been lettered *A, E, I, O*. "There are 64 possible moods, 4 possible figures, and 256 possible forms of syllogism." The application of the preceding rules strikes out illegitimate moods, and then it is found that nine legitimate pairs of premisses remain, and that one of the nine is sterile. The next

step is to determine how many of the legitimate moods are valid in the four figures, with the result that nineteen combinations of mood and figure are found to be at once valid and useful. Then this fact is clenched in the famous mnemonic lines giving a name to each mood in each figure, and indicating thereby the laws of conversion. To the usual five lines are added two others—

Quinque subalterni, totidem generalibus orti,  
Nomen habent nullum, nec, si bene colligis, usum—

translated thus:—"The five subaltern moods which are derived from the same number of moods with universal conclusions have no name, and, if you draw the conclusion rightly, no use."

The treatment naturally grows more interesting as the work proceeds, and the student who toils through the drudgery of the earlier chapters is rewarded by the interest of the later. The last chapter deals with Aristotle's division of fallacies, and an appendix contains sets of most useful exercises, arranged according to chapters, the answers to which may be obtained from the author.

#### THE GREATEST PLANTAGENET.

*The History of Edward the Third (1327-1377).* By James Mackinnon, Ph.D. (Longmans.)

There is plenty of room in these days for separate biographies of our most active and distinguished monarchs, not merely as sections of a general history or articles in a dictionary of biography, but in the form of independent volumes, based on special research. The work should be done by writers of historical training and instinct, of adequate leisure and industry, and not as a mere repatching of old materials, a repetition of other men's work in a different phraseology. Dr. Mackinnon gives us a portly volume on the greatest of the Plantagenets, which is, in some measure, a history of England during the middle half of the fourteenth century. He has set about his task in the right way, studying for himself the contemporary chronicles and documents, and guiding himself by the critical labours of scholars who have edited these same contemporary records. On the whole, his volume is a historical biography of Edward such as we had a right to expect from a careful and legitimate student of history. It is an independent work, which tells the tale of a very important period in reliance on the best authority, and, in so doing, avoids the dryness of a mere narration of facts. Indeed, the author is so anxious to avoid baldness and dryness that he occasionally indulges in a facetious vein. Speaking of a sermon from the Chancellor at the opening of the last session of Edward's reign, he says:

The bishop canted with an unction which must have threatened the gravity of his auditors. . . . Like St. Paul, the King had been spared to be a chosen vessel of Divine grace. If it were permissible to shake one's head during the delivery of a courtly sermon, in the supreme Court of Parliament, surely every head must have wagged at this solemn deliverance. . . . In contemplation of this chosen vessel, let those present strive to merit the same grace and eschew all vice (great inward laughter assuredly!). The head may be sound and full of virtue, but some of the members at the same time be sick. So the King, who is the head of the nation, may be a pattern of virtue, and yet his subjects be given to sin (renewed inward risible shakings!).

"Risible shakings" will hardly pass muster. We prefer Dr. Mackinnon in his more sober mood, which is, in fact, the mood of his ordinary moments. He is not always gilding the pill of history for his St. Andrews students with pawky reminiscences of Carlyle.

It is unnecessary to say that this volume abounds in highly interesting pages, of which the author has very frequently made the utmost. The life of Edward the King and Edward the Prince are full of dramatic passages. Their warfaring in France has been told with great spirit by Froissart, by our own Baker de Swinbroke, Chandos Herald, and other writers of the fourteenth and fifteenth centuries; and Dr. Mackinnon does not allow much of their original vigour to escape in the course of transposition. Not only Crecy and Poitiers, but various intermediate battles by land and sea, are described with plenty of liveliness and effect. The naval encounter with a big Spanish fleet off Winchelsea, a sort of rehearsal of the battle of the Armada, two hundred and thirty years later, makes a very stirring story. The English were greatly overweighted by the Spanish vessels, but they were handled by descendants of Vikings

and ancestors of the men who won Aboukir and Trafalgar. One incident of the day is worth quoting:—

The "Salle du Roi," commanded by Robert de Namur, was engaged in hot combat with a large Spaniard, when the Captain made full sail, and sped off, dragging the English vessel along. The interlocked ships passed near Edward, who called out: "Rescue the 'Salle du Roi.'" In the noise of battle the order was unheard, and the Spaniard got clear away in the gathering darkness. Thereupon one of Lord Robert's servants, named Haekin, sprang on board the Spaniard, and, mounting the rigging, cut the ropes that held fast the sail. Down flapped the canvas, and the vessel came to a standstill. It was a daring deed, in keeping with the wild, reckless *bravoure* of the age, and it was effectual, for Lord Robert and his men, clambering over the bulwarks, cut down the crew, and returned with their prize amid the cheers of the English fleet. Before night closed, and the triumphant trumpet blast of the English ship announced that the battle was over, seventeen great ships had been captured; the rest escaped in the darkness.

The least that can be said for Dr. Mackinnon is that he has produced a good reading book on satisfactory lines, which will make the reign of Edward III. stand out more prominently in the mind of every one who studies it.

#### GREEK ORIGINALS.

*More Finds in Egypt.* (Egypt Exploration Fund.)

The most important of the classical "finds" in this second instalment of the Oxyrhynchus Papyrus is a fragment of Menander's comedy of the "Shaven Lady." This play, hitherto known by two lines only (though there is an epigram in the "Anthology" describing its subject), now ranks among the chief remains of the dramatist, the fragment containing about fifty lines. The plot is of the familiar type, a soldier of fortune and his mistress being the principal characters. The incident which gave the play its name reminds us of a complication which has done duty in modern fiction times without number. The soldier cuts off the lady's hair in a fit of groundless jealousy; he has witnessed her affectionate greeting of a stranger whom he supposes to be a lover, but who turns out to be a brother. In the domain of history, the chief example is a list of the Olympian victors at seven celebrations of the Games, 480, 476, 472, 468, and 456, 452, 448 B.C. The order in which the contests are given agrees, in the main, with what we find in Pausanias and elsewhere. It is interesting to see that the winning horses came from Sicily or Argos in every case where the name is decipherable. The dates, it will be observed, fall in with the poetical activity of Pindar and Bacchylides, and the particulars given by the papyrus help to settle some disputed points. The latest date known for any composition of Bacchylides has hitherto been 468 B.C.; we now know that he was writing in 452. But the most interesting fact suggested by the fragment is one that relates to matters far more important than a list of successful athletes, viz., that modern critics are far too ready to correct the scholiasts and ancient commentators generally. There is not much to say—or, rather, much that can be said within available space—about fragments of extant authors. We observe, however, that the text of a portion of St. John's Gospel (about thirty verses) agrees in the main with the readings of Westcott and Hort, and that some of the *scholia* on Homer are found to be earlier than was supposed, and are accordingly raised in value. The documents relating to private affairs are very varied. There are prescriptions for ear-ache and other maladies (it may be noted that the ancients found turpentine useful), a horoscope, mortgages, marriage settlements, writings of divorce, registration of titles and property generally. One or two examples may be given. Syra complains that her husband had squandered her dowry and ill-treated her. He was without means when she married him and took him to live in her parents' house (the old people must have been complainant), and she asks that he be compelled to repay her dowry of 200 *drachmæ*, with half as much again by way of fine. Unfortunately, we shall never know whether she got it. In the next documents the parts are reversed. Tryphon complains that his wife Demetrous had left him, though he had provided for her in a way that exceeded his resources (*kai υπέρ δύναμιν*), and that she had carried off with her property of the value of 40 *drachmæ*. Tryphon, hope triumphing over experience (as Dr. Johnson put it), marries again, and complains that Demetrous and her mother had assaulted the second wife. A man writes that the fruit crop at Memphis had been poor; nevertheless he sends five hundred beans and fifty apples for his friend's nephews and fifty apples for himself and "the little

one." Another makes a remittance of 8 *drachmæ* for the services of a mouse-catcher (*μυοθηρευτής*, a word not in Liddell and Scott).

It is satisfactory to know that the store from which the editors have to draw is far from being exhausted.

ROMAN HISTORY PRIMERS.

- (1) *Roman History*. By Dr. Julius Koch, translated by L. D. Barnett. (Dent.) (2) *A Skeleton Outline of Roman History*. By P. E. Matheson. (Longmans.)

(1) Dr. Koch's compendium, which appears as a volume of the "Temple Primer" series, includes within a limit of 150 pages the whole of Roman history from the earliest times to the fall of the Western Empire. It is based on the best modern authorities, and is characterized throughout by a just sense of proportion. The small-print summaries of the several periods and the source of our knowledge about them are particularly valuable. A sixth-form boy or a University student ought to find it very useful in revising and methodizing his work for examination. The translation leaves much to be desired. Little or no effort is made to avoid the cumbrous sentences and over-technical language which often make learned German books repulsive to an English reader. Sentences like "the Gallic conquest added to the aging body of the Roman State a limb which contributed largely to the renewal of its youth"; "The influences of foreign culture also enter now with potency into the land," and such a phrase as "in the excessive confidence of his absolutely unswerving methods," are scarcely English. The translator seems not to have realized that a good translation of German often involves as much reconstruction as a version of Livy or Cicero.

(2) That this unpretending little book should have reached an eighth edition is sufficient evidence of its utility. In the present issue some twenty-five pages have been added, carrying the history from the death of Augustus to that of Marcus Aurelius. Besides the chronological list of events, two points call for notice—the excellent short summaries of the general character of the several periods into which the history is divided; and the careful tabulation of the details of treaties, constitutional changes, &c. For example, the proposals of M. Livius Drusus in B.C. 91 are thus tabulated—Object: (1) Restoration of a reformed Senate. (2) Provision for poor citizens. (3) Justice to the Italians. Details: (1) New corn law. (2) Agrarian law. (3) Transference of jury courts to a Senate enlarged by 300 *equites*. (4) Extension of the franchise to the Italians.

ÆSCHYLUS IN ENGLISH.

*The Suppliants of Æschylus*. Translated, from a revised text, by Walter Headlam. (Bell & Sons.)

This little volume appears in Messrs. Bell's shilling series of classical translations; and it is a long expected instalment of what we trust will be ultimately a complete prose translation of Æschylus. Mr. Headlam says that "there is no longer any reason for supposing this curiously interesting play too difficult to read." Of the many excellent footnotes supplied by the translator we need not here speak in detail: they certainly justify the statement that the text of the play has been revised. Mr. Walter Headlam is well known as a learned and militant commentator on Æschylus; and anything from his pen on the subject, on which he differs so widely from the ingenious champions of manuscript oddities, is worthy of attention. We must, however, express in general terms our admiration of the ingenuity and scholarship displayed in dealing with the many thorny places in the text. It appears to us that in his method Mr. Headlam is a follower of Wecklein; and this means that every difficulty is solved in a manner that never fails to command our respect, even though it may fail to compel our assent.

This play—so archaic in manner, whatever be its date—does not afford much scope to the translator. There is plenty of spirit in the story and its unfolding, but little that is beautiful; and we await with much interest Mr. Headlam's version of the "Prometheus" and the "Oresteia." Of the "Suppliants," his own expression "curiously interesting" seems to sum up in two words both the strong and the weak points of the play. But such small opportunities as he had Mr. Headlam has seized. We append a brief specimen of his translation. It is the place where the daughters of Danaus are in suspense while the ship of their wild suitors is approaching.

O for a seat somewhere in the heaven above, against which watery clouds turn into snow, or some sheer, goat-free, uncommunial, solitary, beetling crag, some vulture-haunting peak, assuring me a

plunge into the depth, before I meet perforce with a wedlock that rends my heart! Thereafter I refuse not to become a prey to dogs and a feast unto the fowls of the land; for death delivereth from sorrow and sighing. Come death, befall me death before the marriage bed! What way of escape can I yet find to deliver me from wedlock?

We cannot too strongly recommend all who have occasion to study the "Suppliants" to lay out a shilling on Mr. Headlam's translation.

THE VOICE.

- (1) *Speaking*. By William Mair, M.A., D.D. (Blackwood.) (2) *The Natural Use of the Voice*. By George E. Thorp and Wm. Nicholl, F.R.A.M. (Edward Arnold.)

(1) Dr. Mair has aimed at producing a practical manual chiefly designed to cure provincialisms in pronunciation. It is doubtful whether mere written directions without the assistance of oral demonstration can achieve substantial results in this direction. Correct pronunciation is the result of constant imitation and comparison, and rules may often prove misleading when employed by persons whose auditory and vocal organs vary in power and sensitiveness. A large part of the book is devoted to a careful description of the vowel and consonant sounds, with simple directions for their formation; and ample lists of words are given for purposes of exercise in both similar and contrasted modes of pronunciation. The rest of the book contains much sensible and practical advice on speaking, with particular reference to the faults generally met with in the pulpit. The book is written for the special guidance of young men preparing for the ministry, and it would seem that a monotonous and indistinct delivery is as common in Scotch pulpits as in English. In England speakers are indistinct because they have never practised themselves in keeping their teeth apart while speaking. The only remedy is constant reading with a small cork between the teeth, and Dr. Mair might well have insisted more strenuously on the importance of this exercise.

(2) The appearance of a fourth edition of "The Natural Use of the Voice" shows that its scientific treatment of voice production is appreciated by musical students. The authors have added a short chapter on expression in singing.

GENERAL NOTICES.

CLASSICS.

"Murray's Handy Classical Maps." Edited by G. B. Grundy.—

- (1) *Britannia*, (2) *Hispania*, (3) *Italia*. (John Murray.)

In a note on the map of Gallia we spoke highly of the admirable manner in which Mr. Murray's maps are produced. They are, indeed, vastly superior to any maps that have hitherto been within the reach of English classical students. The scale is large and the system of colouring perfect. The "Italia" will be a great boon to all who read Roman history, for it shows at a glance the method by which Rome controlled the peninsula. The impressive appeal to the eye will assist the memory and help the imagination. The modern names are, in most cases, added to the ancient. It is greatly to be hoped that the series, when completed, will be issued in the form of an atlas.

A *Latin Verse Book*, by A. H. Thomas (Rivington), is intended for beginners in elegiacs, and comprises all that is covered by "Pantion," "Clivus," and "Gepp." The pupil starts with single feet, to arrive at last—if he does arrive—at easy pieces to be done without assistance. Mr. Thomas in no way departs from what may be regarded as the established method of teaching Latin elegiacs to beginners. The weakest point in this system seems to us to occur in the middle, or what we may term the "Gepp," section—that stage in which each piece of poetry printed is followed by an "adaptation." It is true that Mr. Thomas does not make it possible, as Gepp does, for the pupil to "do" the adaptation without once looking at the English passage; but we cannot help thinking that this "adaptation" business would be improved by an infusion of Mr. Rouse's ingenious "demonstration" plan. Every teacher knows how desperately difficult it becomes at a certain point in Latin verse teaching to make the pupil think for himself; and, though we gladly acknowledge that Mr. Thomas has done something to solve this difficulty, we doubt whether he has entirely disposed of it. In the third part the passages are taken from papers set in public-school scholarships and Army examinations.

*Isocrates, De Bigis*, edited by W. J. Woodhouse (Clive), was called into being by an announcement that the speech is selected for examination by the University of South Africa. It is a good subject for the examiner, but a poor thing for the candidate. Doubtless it served its purpose in its day. What that purpose was, indeed, is not quite clear; but Mr. Woodhouse leans to the view that the speech is a rhetorical exercise. This is the only point in which he diverges from the views of

Prof. Jebb, on whose "Attic Orators" he has drawn largely in his introduction. The candidate will find all that he requires in the volume, and we note with pleasure the clearness with which the grammatical points are explained. To express elementary notes clearly and briefly is often difficult. Mr. Woodhouse seems to us to have succeeded. The language of the speech contains no difficulties; but it is not likely to be read in our schools.

*Ovid, Metamorphoses I. and II.*, with Ovid's autobiography, edited by W. T. Peck (Ginn), belongs to the American series of school classics which, in addition to notes and vocabulary, is provided with maps, illustrations, and word-groups. The autobiography is contained in "Tristia" IV. 10, which is printed in full at the beginning of the book. Some of the illustrations are well produced. The vocabulary is more elaborate than we usually find in English school-books. The notes are simple and very brief. On the whole the volume well sustains the favourable opinion that we have formed of this series.

*Livy, Book V.* Edited by W. C. Laming. (Blackie.)

This is a useful edition, with a good supply of maps and illustrations, to which a plan of the site of Veii might, with advantage, have been added. There is a carefully written introduction, dealing with Livy as a historian, and with the credibility of early Roman history. The appendix contains useful hints on translation, and some sentences and longer passages of English, to serve as exercises. Still more might have been done in this direction by following the lines of a Latin exercise book, too little known, Simpson's "Caesarian Prose." The notes are, on the whole, very fair, but there is room for careful revision. For example, in chapter xxxviii., *terga caesa*, following immediately on *ne ulla caedes pugnantium fuit*, can hardly mean "the rearguard was cut to pieces," even if the words would bear that meaning. Again, in chapter xl., *muliebris fletus et concursatio . . . rogantium viros natosque cui se fato darent*, the last words can hardly mean: "To what fate they (the women) were to abandon themselves." Surely they were asking their husbands and sons to what fate they (the men) were consigning them. There is no mention made in the preface of Weissenborn's notes, which might have been consulted with advantage.

*The Odes of Horace, Book III.* Edited by S. Gwynn. (Blackie.)

Horace has been, in recent times, so often and so well edited that it is hard to see why this volume was published. The editor does not seem to have consulted the best modern editions, and his work does not stand high in point of view of scholarship or of felicity of rendering. It might be possible, with the admirable works of Dean Wickham, Mr. Page, and Dr. Gow before one, to construct a perfect elementary school-book, but we can hardly say that Mr. Gwynn has succeeded in doing so. Take, for example:

Quicumque mundo terminus obstitit,  
Hunc tangat armis visere gestiens  
Qua parte debacchentur ignes,  
Qua nebulae pluvique rores,

which is thus rendered: "Whatever boundary bars the universe from spreading, she shall reach with her sword, in eagerness to behold from what quarter wells the riot of fire, from whence the mist and dew of rain." The first clause is nonsense, and the force of the tense ("has been set," Wickham, Page) is missed; *qua parte* can hardly mean "whence"; while it is clear that Horace meant the torrid zone to be a limit both of human habitation and of Roman conquest, not an object of scientific investigation; and, lastly, "wells the riot of fire" is one of those unmeaning expressions which may find a place in inferior modern poetry, but are quite alien to the sanity of Horace. Again:

ex quo destituit deos  
Mercede pacta Laomedon, mihi  
Castæque damnatum Minervæ,

is translated: "Doomed from the day that Laomedon cheated the gods of their covenanted hire, doomed by me . . ." Here *destituit* is treated as equivalent to *fraudavit* (Lewis and Short) without any reference to the more generally accepted view that it is used in its ordinary sense and *mercede pacta* is an ablative absolute. Again, the dative of the agent with a passive participle, a usage almost exclusively limited to cases where the dative can be otherwise accounted for, is accepted as a matter of course, and even said to be very common in verse. Wickham, by the way, takes it as meaning "handed over for punishment to me." The book contains some pretty illustrations from ancient vases, &c.

(1) *Scalæ Primæ*. By J. E. Spencer. (2) *Scalæ Mediæ*. By P. A. Underhill. (Bell & Sons.)

Illustrated classical readers for the lower and middle forms of schools are now becoming common, and have frequently been noticed in these columns. Among them, Messrs. Bell's Series, of which these two books form part, holds an honourable place. "Scalæ Primæ" begins with short narratives, many of them from Roman history, consisting entirely of simple sentences, each beginning a fresh line. Then follow continuous stories, still limited, for the most part, to simple sentences. The third part contains a few simple extracts from classical authors. The extracts seem to be nicely graduated, and the vocabulary is carefully drawn up. Occasionally in the made-up stories one comes across phrases and modes of expression that do not look quite classical,

and would be the better for revision by a first-rate writer of Latin prose. "Scalæ Mediæ" contains selections from Eutropius, followed by the story of the Helvetian War, from the First Book of Cæsar, with notes and vocabulary. It may be questioned whether a complete section of Cæsar, with all its difficulties, is the best sequel to the simple sentences of Eutropius. Would it not have been better to choose easy narrative passages from the whole of the "Gallic War," with short connecting links? The schoolboy would have had more facts, and less *oratio obliqua*. The First Book of Cæsar has been edited far too often.

#### SCIENCE.

*Lessons in Elementary Physiology.* By Thomas H. Huxley, LL.D., F.R.S. Enlarged and Revised Edition. (Macmillan.)

Just a third of a century has passed since Huxley wrote his excellent introduction to physiology, which has, in the meantime, gone through five editions, and has been reprinted more than a score of times. This clear exposition has been the basis of much, not to say most, of the educational work since achieved in physiological science. The revision has been undertaken by Sir Michael Foster and Dr. Lea. In a modest preface Sir Michael gives most of the credit for this difficult work to his collaborator. The work is now well up to date, and teachers will find it once again conspicuously useful.

*An Introduction to Analytical Chemistry.* By G. G. Henderson, D.Sc., M.A., and M. A. Parker, B.Sc. (Blackie.)

After some exercises on "dry" reactions, the student is led through the "wet" tests for all the common bases and acids, and the means of separating the metals of the five groups. The more important methods of organic analysis complete the book, which has been carefully prepared, and should prove a valuable laboratory manual. It is not intended for absolute beginners, but for those who have already had some training in practical work.

*An Introduction to Qualitative Analysis.* By H. P. Highton, M.A. (Rivingtons.)

The author has endeavoured to present the usually dull mechanical work of "test-tubing" in such a way as to be of educational value. He consequently begins by experiments to prove that particular salts contain particular metals, and that the salts of one metal differ from one another in their reactions. At the end of Part I. tables are given for the analysis and separation of the substances already studied. In Parts II. and III. a larger number of bases and acids are dealt with. Teachers who are obliged to push their pupils into analysis early will find this a useful guide.

*Elementary Chemistry for High Schools and Academies.* By Albert L. Arcy. (Macmillan.)

American teachers of chemistry have taught us the best way to set to work; but the present book falls below the usual American standard. It adopts the plan we are now all abandoning, of telling the beginner about elements and compounds, atoms and molecules, at the outset; and, while it follows the plan of questioning after giving instructions for an experiment, the questions sometimes too obviously point to the answer. The spelling of *oxid*, *chlorin*, and *sulfur* (why not also *fosforus*?) will look strange to British eyes.

"Text-Books of Technology."—*Practical Chemistry, Part I.* By W. French, M.A. (Methuen.)

This book contains a course of experimental work for beginners in chemistry, following to a large extent the scheme of the Headmasters' Association. It has been carefully drawn up, the scheme including lecture-table experiments as well as those to be done by every pupil. But it would seem that the last two pages were finished in a great hurry, or we should not find in them the unexplained symbol  $H_2O$ , nor this sentence: "Our conception of an atom, if it exists, is far too small! ever to hope to find the mass."

*Elementary Practical Chemistry.* By A. J. Cooper, B.A., B.Sc. (Whittaker.)

A good introduction to chemistry suitable for an evening course or day classes with limited time. The most modern plans of work are followed.

*Volumetric Analysis.* By John B. Coppock. (Whittaker.)

The student will here find all the usual methods of volumetric work set out and explained in a compact manner. Previous knowledge of general chemical theory is assumed.

*Exercises in Practical Physics for Schools of Science.* By R. A. Gregory and A. T. Simmons, B.Sc. Part II. (Macmillan.)

This second part carries on to heat, light, sound, magnetism, and electricity the methods already noticed in the first part, and maintains the high standard of the latter.

*Elementary Practical Physiography, Section II.* By John Thornton, M.A. (Longmans.)

A continuation of Mr. Thornton's course of lessons and experiments in elementary science, planned so as to be serviceable to candidates for the Queen's Scholarship Examination. The well printed text is simple and sound, and there are some very good illustrations.

## MODERN LANGUAGES.

*The Muret-Sanders Encyclopedic English-German and German-English Dictionary.* Abridged Edition. English-German by B. Klatt; German-English by H. Baumann, M.A. (Grevel & Co.)

This "abridged" edition of the Muret-Sanders Dictionary comprises over 1,730 pages in triple columns, which argues much for the dimensions of the unabridged work. A vast labour has been undertaken by the editors, and, as they say in the preface, apologizing for the number of abbreviations, it is no light matter to deal thoroughly with the two richest vocabularies in existence. Abbreviation was doubtless necessary in order to keep the dictionary within reasonable compass; and opinion may differ as to the value of some of the indications and discriminations for which these scores and hundreds of signs and tokens are employed. Many of them belong to what is known as the Toussaint-Langenscheidt phonetic method; another series, printed distinct from the words, relate to accent and stress of syllables. In any case the apparatus of the dictionary errs, if at all, on the side of superfluous utility. Mr. Baumann, who is responsible for the German-English section, tells us that he has been engaged on his work for fully four years, which one can well believe. He has based his German vocabulary on that of Sachs and Villatte in their German-French Dictionary, and on their "unsurpassed method of grouping compounds." The task of producing this work must have been exceedingly laborious, but it will save labour for all who use it.

*Hauff's Der Scheik von Alessandria.* Edited by W. Rippmann. (Pitt Press.)

This is a welcome addition to the elementary reading-books available for schools, the "Karavane" having become almost too hackneyed, and Mr. Rippmann's name is sufficient guarantee for good editing. The notes are intentionally not very numerous, but they are sufficient. The vocabulary is well arranged, and contains a good many idiomatic uses of words, thus relieving the notes.

*Outlines of German Philology.* By J. E. Mansion. (W. H. White & Co.)

This is a useful summary of the most important points of historical German grammar. It is clearly arranged, and written with constant reference to English as well as to German; but it is not as readable as Behaghel's well known book, of which an English translation has been published. The introductory chapter on the history of the language would be much improved by the insertion of short annotated specimens of Gothic, Old High German, &c. A very few lines would make such names much more real to a student. A short chapter on Phonetics very properly follows, and contains some good illustrations, indicating the work of a practical teacher. The vowel and consonant changes are well set out, and much trouble has been taken to fix the attention by variety of type. The same remarks apply to the accidence; syntax has been intentionally left alone. The appendix contains some useful lists of words belonging to the common Germanic stock, with English and German side by side, of Latin and French loan-words in both languages arranged under several heads, and of a few words etymologically interesting.

## MISCELLANEOUS.

"Story of the Nations."—*Modern Italy, 1748-1898.* By Prof. Pietro Orsi. (T. Fisher Unwin.)

It is true, as Prof. Orsi says, that the internal history of the peninsula of Italy has been somewhat neglected by students; though for artists, antiquarians, churchmen, and travellers, no country is more resorted to or better known. One reason is that the unity of Italy was broken almost beyond hope of recovery, and, for the first hundred years of the period which is dealt with in this volume, the peninsula as a whole had no organic history. It has been different during the last half-century. The Risorgimento has revived its interest and importance; Garibaldi, Mazzini, and Cavour gave us a new Italy, though, as we said when noticing Mr. Stillman's "Union of Italy," the essential work of reunification is not even yet completed. For the former of these two sections, we have been content to follow Italian history through the annals of the Papacy and the records of the Napoleonic wars; and, indeed, Prof. Orsi gives us very little in the way of connected narrative before the present century. His story is brightly told, with more of the genuine Italian spirit and feeling than English writers have been able to import into their books.

"Bell's Cathedral Series."—(1) *The Cathedral Church of Saint Paul: an Account of the Old and New Buildings, with a short Historical Sketch.* By the Rev. Arthur Dimock, M.A. (2) *Carlisle.* By C. King Eley. (Bell & Sons.)

(1) This is naturally one of the most interesting volumes of Messrs. Bell's excellent series of "English Cathedrals." The history of St. Paul's runs parallel with the history of the City of London, and it is told by Mr. Dimock with as much fullness as his space allowed. The book is illustrated by thirty-nine good pictures of the old and new cathedrals, and it ought to find a large sale amongst Londoners.

(2) Mr. Eley gives a succinct account of the Cathedral Church of Carlisle. Carlisle, he says, "is not a large or a notable cathedral." It

seems to us very notable in its way, if only for its correspondence with the significant history of the north-western shoulder of England.

Amongst the reprints of the month, we have from Messrs. Macmillan a cheap reissue, in one volume, of Mr. Parkin's *Edward Thring*, including life, diary, and letters, but considerably abbreviated from the first edition.—Messrs. Ward, Lock, & Co. provide a low-priced edition of Dean Stanley's *Life of Arnold*, with portrait and illustrations, and the interesting appendices of the original work.—Messrs. A. & C. Black send us Scott's *Ivanhoe*, with introduction and notes by J. Higham, M.A.

*The World and its Commerce.* (Pitman.)

A compact and handy primer of commercial geography. The section dealing with the United Kingdom is much fuller, and gives much more local information, than the sections on foreign countries. There are many maps, some political, some physical, some showing the distribution of products. The railways of Great Britain and the United States are mapped and described; otherwise there is a deficiency in this respect; and the chief sea-routes and caravan-routes do not seem to be dealt with at all. The book, however, only claims to be a primer, and it is so full of well arranged useful information that we have no hesitation in recommending it for use in class, either by itself or in conjunction with an ordinary text-book of political geography.

*Princess and Fairy; or, The Wonders of Nature.* By Lily Martyn. (Chambers.)

A little princess, with whom town-life has disagreed, is sent into the country to recruit. She is fortunate enough to be attended by a governess who looks like a fairy, who teaches her experimentally the wonders of Nature. Under this delightful guidance her royal highness learns all about snails and glaciers and the construction of sweet peas and camels. The story is slight, but interesting, and is told with a play of quiet humour that cannot fail to make it a favourite reading book. There are many excellent illustrations by which the youthful reader is taught to observe, and some pretty pictures of the princess and her fairy teacher.

(1) *Chatty Readings in Elementary Science: Nature Knowledge;*  
(2) *Chatty Object-Lessons in Nature Knowledge.* (Longmans.)

(1) This new series of Readers has some excellent points: the text is well printed, simple, and varied; the illustrations are copious and above the average in quality, the large coloured ones and many of the others being pretty, as well as directly to the point; while some of the unobtrusive little ones, showing clearly the teeth, hoofs, and so on of the various animals, are specially good. The book would have been better, and no less chatty and attractive, if arranged on some kind of logical plan. The lists of words at the head of each chapter (an old fetish of the Code) are essentially unnecessary. The "Teachers' Notes" at the close destroy the character of the book from a child's point of view, and are not in any way way valuable enough to justify their intrusion, for any teacher of average ability would be able to expand the reading lesson without such aids. Still, for elementary purposes, the series may be commended.

(2) Ample aid for teachers has been provided in another series of handbooks from the same publishers, entitled "Chatty Object-Lessons in Nature Knowledge," written by F. W. Hackwood in three volumes for the first three standards. It will be found a very useful and suggestive help to young teachers who are expected to give object lessons on plants and animals without having had a vestige of previous scientific training—an expectation, by the way, greatly to be deprecated. The lack of logical arrangement—in thirty lessons we find such diversity of subject as "the monkey," "the oyster," "flowers," and "national foods"—is a more serious drawback in this series than in the Readers, since every course of object lessons should have some general law as a background to check the tendency to discursiveness. Some of the questions designed for the class are poor, but it is to be hoped that no teacher will follow any printed notes of lessons blindly. The outline sketches for the blackboard will be found particularly useful.

*A First Form Grammar.* By M. Morgan Brown. (Longmans.)

If English grammar is passing away from our schools as one of the chief form subjects, there will still remain the need to give children some elementary notions of the parts of speech before plunging them into the highly inflected dead languages. Even Acham assumes in his child of tender years "a knowledge of the three concords," apparently "picked up" in the nursery. The teacher himself must be the source of happy explanations and illustrations, but a plainly printed, simple text-book, such as Mr. Morgan Brown has prepared, for the pupils to have in their hands as a base of operations, will prove a most useful aid. He has kept steadily in view that the book is a mere stepping-stone to Latin grammar, and this singleness of aim will be a recommendation to many teachers. Inevitable difficulties, such as the distinction between "substantival" and "adjectival," are well brought out by continual repetition, while all luxuries in the matter of technical terms are excluded. The exercises at the end are handy for preparation work, being well within a pupil's unaided power. We note the following omissions and imperfections:—The subjunctive of the verb

"to be," for some inscrutable reason, is labelled "not given"; the perfect tense is classed as a past tense, thus preparing a rock ahead for the sequence of tenses in Latin; "can" is treated as an auxiliary verb; no help is given (and it is easy enough to give) in the matter of finding the subject of a sentence—"what we are talking about" being no clue to the given example, "All over the field we found mushrooms."

*Courtesy: A Reader for Older Boys and Girls.* By H. E. Norton. (Macmillan.)

There is certainly room for improvement in the manners of most boys and girls, and a Reader devoted to the subjects of Courtesy, Politeness, Good Manners, Chivalry, and Patriotism is very opportune. Simple explanations of these terms are given, and distinctions between them are carefully drawn, while the bulk of the book is devoted to illustrative anecdotes, tragic, pathetic, and humorous, with very few that can be charged with priggishness. The illustrations are feeble, but no doubt add to the interest of the book for school children. In the hands of a capable teacher who will supplement the stories from his own experience, this book will prove a pleasant change from the ordinary run of information-laden Readers.

*The Concise English Dictionary.* By Charles Annandale, M.A., LL.D. New and enlarged Edition. (Blackie & Son.)

This well-approved "literary, scientific, and technical" dictionary of the English language reaches us in a new form, enlarged by a supplement of additional words and by very useful appendices. Thus there is a list of names from mythology and fiction, followed by a list of authors, a table showing the formal modes of addressing persons of title or official rank, and a conspectus of the moneys of the world. Whilst the substance of the book is enlarged and improved, its price is considerably reduced, so that whatever value it may originally have had is relatively increased.

*How to prepare Essays, Lectures, Articles, Books, Speeches, and Letters, with Hints on Writing for the Press.* By Eustace H. Miles, M.A. (Rivingtons.)

Mr. Miles's experience as an Honours coach in essay writing at Cambridge University has enabled him to supply this useful book on a vague and difficult class of subjects, such as the expression of ideas, style, speaking, writing, proof correcting. The author—perhaps not without reason—passes severe comments on the failings of teachers. He says, in the preface, that "unfortunately a great deal of our teaching is in the hands of those who do things instinctively and by the light of Nature. They themselves do the whole thing as a whole, and they may do the thing very well. But, because they do it in this way themselves, it does not in the least follow that this is the best way for others to learn to do it"; and, in several places, he pauses to consider the reasons "why teachers so often fail to teach." This critical attitude towards teachers will be apt to provoke a *tu quoque*, for there are some of the chapters which leave the reader with a tautologous feeling of vagueness and want of precise answer to the questions raised. For instance: "What is style?" We are treated to an admirable analysis of the characteristics of the expression and style of the Sermon on the Mount. We have also the following suggestive rhyme:—

"Ideas should be the Author's own, seen clear by his own eyes,  
Free from wrong Aims, Omissions, Bias, Fallacies, and Lies,  
With Unity, Proportion, Order, Interest, and Style.  
Style varies with the Subject, causing anger, tear, or smile,  
Excitement, scorn, calm reason, action, sympathy, or fear  
(To the aim and audience fitted); holds the attention and is clear.  
Music and Balance, Contrasts, 'Tropes' and Rhetoric should be seen;  
The Punctuation, Grammar, Language, where 'Good Use' is queen."

Yet we cannot answer the question: "What is style?" Nevertheless, the work teems with useful suggestions, not only for pupils, but also for teachers and examiners.

*Outlines of English Grammar.* By J. C. Nesfield, M.A. (Macmillan.)

A handy and generally sound introduction to grammar, including etymology of the simplest kind, rules of syntax, and a little analysis.

*Pope's Essay on Criticism.* Edited, with Introduction and Notes, by F. Ryland, M.A. (Blackie & Son.)

A very good piece of work by the editor of "The Rape of the Lock." The "Essay" is well elucidated, and the volume is one which we should unreservedly commend for students on literary lines.

*A Text-Book for Morning and Evening Prayer and the Litany.* By the Rev. Septimus Buss, LL.B. (Rivingtons.)

An excellent introduction to the critical study of the Prayer-Book. Mr. Buss keeps the historical value of the English liturgy well in view. His hundred pages are just what is needed for boys and girls who are to be examined in this subject, and for others who are not.

*Geographical Questions specially adapted for Examinations in Commercial Geography.* By J. Wulfson. (Relfe Bros.)

A classified collection of well chosen questions, which will serve very aptly as a guide to elementary teaching of commercial and utilitarian geography.

Messrs. G. Philip & Son send us a series of coloured "Diagram" Hand-Maps. The series includes thirty different maps. The specimens submitted are physical maps without names, though the positions of the greater towns are indicated. In all there is a small inset map of the British Isles, drawn to the scale of the larger ones. A series of "Diagram" outline maps accompanies the coloured ones.

From Mr. Edward Arnold we have a collection of geographical scenes, tastefully printed in flat colours—Mont Blanc, Gibraltar, Hong Kong, Land's End, &c. They are on large single sheets, and may be used, mounted or unmounted, for decorative purposes, or to aid a geography lesson, or even for copying. They are decidedly superior of their kind.

*Military Drill for Boys' Schools, with suitable Music.* By Ben Johnson. (Gill & Sons.)

This is the fifth part of "Musical Drill." It is simple and practical, well printed and illustrated, and should be very serviceable to teachers.

WE HAVE ALSO RECEIVED the following publications and new editions:—

*Return from Local Authorities as to the Application of Technical Education Grants; Calendar, History, and General Summary of Regulations of the Department of Science and Art, 1900.*

*Combined Readers in Elementary Science and Geography, Book III.,* by V. T. Murché (Macmillan).

*Medical Indoor Gymnastics,* by Dr. M. Schreiber (Williams & Norgate).

*One Year of Sunday School Lessons for Young Children,* by Florence U. Palmer (Macmillan).

*Object-Lessons in Botany from Forest, Field, and Garden, Book II.,* by E. Snelgrove, B.A. (Jarrold).

*Play the Man; Talks with Boys,* by Herbert Reid (Oliphant, Anderson, & Ferrier).

*Notes on the Acts of the Apostles i.-xvi.,* by E. A. Belcher, B.A., and C. C. Carter, B.A. (Relfe Bros.)—a very serviceable little handbook.

## MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on March 7. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Charles, Miss Dawes, Mr. Easterbrook, Mr. Eve, Mr. Harris, Miss Jebb, Rev. R. Lee, Sir Philip Magnus, Mr. Millar Inglis, Mr. Pinches, and Rev. J. E. Symns.

The minutes of the last meeting were read and confirmed.

The Diploma of Associate was granted to J. Kirkpatrick, W. J. Herlihy, and C. H. Condell, who had passed the required examination.

Six members of the Council were appointed to represent the College at the Jubilee Commemoration of the Frances Mary Buss Schools, to take place at St. Paul's Cathedral on April 3.

Miss M. Crookshank, L.L.A., St. Leonard's College, Amhurst Park, N., was elected a member of the Council in place of Miss Bailey, resigned.

The following persons were elected members of the College:—

Mr. J. Cussons, B.Sc.Vict., A.C.P., 4 Mount Pleasant, Portmadoc, N. Wales.

Mr. B. Dumville, B.A. Lond., L.C.P., 9 Clissold Road, Stoke Newington, N.

Miss E. Hinton, A.C.P., 28 Hazelwood Road, Northampton.

Mr. A. Lane, A.C.P., 11 Putney Bridge Road, Putney.

Mr. G. C. Oldfield, A.C.P., Church Road, Ashton-on-Mersey, Manchester.

Mr. G. H. O. Piggott, A.C.P., Craven College, Highgate, N.

Mr. J. W. Tucker, A.C.P., 3 Mount Pleasant, Portmadoc, N. Wales.

Mr. R. H. Veun, A.C.P., 118 High Street, Crediton.

The following books had been presented to the Library since the last meeting of the Council:—

By the AGENT-GENERAL FOR NEW SOUTH WALES.—Annual Report of the Department of Mines and Agriculture for the year 1898; Coghlan's Wealth and Progress of New South Wales, 1897-8.

By the BUREAU OF EDUCATION, WASHINGTON, U.S.A.—Report of the Commissioner of Education for the year 1897-8, Vol. II.

By the GENERAL MEDICAL COUNCIL.—Minutes of the General Medical Council, 1899.

By G. BELL & SONS.—Spencer's Scale Prima; Underhill's Scale Media.

By BLACKIE & SON, LTD.—Newton Object Lesson Handbook, No. III.; Blakey's Browning's Select Poems; Downie's Macaulay's Essay on Horace Walpole; Gwynn's Horace Odes, III.; Laming's Livy, Book V.; Leusk's Scott's Marmion, Canto III.

By C. J. CLAY & SONS.—Blythe's Geometrical Drawing, Part I.; Nairn's Homer's Odyssey, Book XI.; Cambridge Higher Local Examination Class List, December 1899.

By W. B. CLIVE.—Hayes' Matriculation Latin.

By MACMILLAN & CO., LTD.—Nesfield's Outline of English Grammar and the Uses of the Parts of Speech; Sandys' Demosthenes (On the Peace, Second Philippic, On the Chersonesus, and Third Philippic).

By RELFE BROS., LTD.—Charter-house Parsing Book; Notes on Analysis and Parsing; Register of Music Practice; Oxford and Cambridge Preliminary Examination Papers in French; Belcher and Carter's Notes on the Acts of the Apostles, I.-xvi.; Perrault's Contes des Fées, with Notes and Vocabulary; Ransom's Modern French Grammar; Wulfson's Geographical Questions.

COLLEGE OF PRECEPTORS.

PROFESSIONAL PRELIMINARY EXAMINATION—PASS LIST.

MARCH, 1900.

THE Supplementary Examination by the College of Preceptors for Certificates recognized by the General Medical Council, the Incorporated Law Society, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, the Education Department, and other bodies, was held on the 6th, 7th, and 8th of March, in London, and at four other local centres, viz., Birmingham, Bristol, Leeds, and Liverpool. The following candidates obtained Certificates:—

FIRST CLASS.

Pass Division.

Berry, A. W.	Doughty, W. C.	Loughborough, W. G.

MATHEMATICS.

6361. (Professor W. H. H. HUDSON, M.A.)—A paraboloid of revolution floats with the lowest point of its base in the surface of a fluid, and its axis inclined at an angle  $\theta$  to the horizon; find its height and specific gravity.

Solution by the PROPOSER.

Let the equation of the paraboloid referred to rectangular axes, with the vertex as origin, be  $y^2 + z^2 = 4ax$  ..... (1) where the axis of  $z$  is parallel to the horizontal tangent at the lowest point Q of the base, the coordinates of which are  $h, k, 0$ . Therefore  $k^2 = 4ah$ .

Let the coordinates of P, the point of contact of the horizontal tangent plane, be  $at^2, 2at, 0$ , where  $t = \cot \theta$ . The equation of the plane of flotation is  $t(y - k) = x - h$  ..... (2)

If PV parallel to the axis meet the plane of flotation in V, the coordinates of V are  $h + 2at^2 - kt, 2at, 0$ . The coordinates of H, the centroid of the immersed portion, which divides PV in the ratio 2 : 1, are  $\frac{1}{3}(5at^2 + 2h - 2kt), 2at, 0$ . The coordinates of G, the centroid of the whole body, are  $2h/3, 0, 0$ . Therefore the direction cosines of HG are proportional to  $\frac{1}{3}(5at^2 - 2kt), 2at, 0$ . But HG is vertical; therefore its direction cosines are proportional to 1, -t, 0. Therefore

$$\frac{1}{3}(5at^2 - 2kt) = -2a.$$

$$\text{Therefore } k = \frac{a(5t^2 + 6)}{2t} \text{ and } h = \frac{a(5t^2 + 6)^2}{16t^2} = \frac{a(5 + \sin^2 \theta)^2}{4 \sin^2 \theta}.$$

This gives the height. Now  $PV = h + at - kt^2 = x'$  suppose, and from (1) and (2) the projection on the plane  $yz$  of the section of the solid by the plane of flotation is  $y^2 + z^2 = 4a(ty + h - kt) = 4aty - 4at^2 + 4ax'$ .

This is a circle of area  $4\pi ax'$ , and therefore the area of the section is  $4\pi ax' \csc \theta$ . Since all parallel sections are similar curves, the area of any section parallel to this cutting PV at a distance  $z$  from P is  $4\pi az \csc \theta$  and the volume immersed is  $\int_0^{x'} 4\pi az dz = 2\pi ax'^2$ . Therefore the specific gravity of the solid referred to the fluid is  $x'^2/h^2$ . Making the substitutions, this will be found to be

$$\left( \frac{1 + 5 \sin^2 \theta}{5 + \sin^2 \theta} \right)^4.$$

14475. (A. GEORGE.)—Find the maximum value of an isosceles triangle DEF inscribed in an isosceles triangle ABC, D being on BC,

EF inclined at an angle  $\alpha$  to BC, where  $\alpha$  is less than both  $\frac{1}{2}A$  and  $\frac{1}{2}(\pi - A)$ .

Solution by J. H. TAYLOR, M.A.

The limitations of the magnitude of  $\alpha$  make the point D always fall within BC. Let EFD, E'F'D' be two triangles of the series; G and G' are the middle points of their bases; and GD, G'D' their altitudes.

$$E'F' : EF :: AG' : AG, \text{ by similar triangles;}$$

$$G'D' : GD :: G'K : GK, \text{ " " " "}$$

therefore  $\Delta E'D'F' : \Delta EDF :: AG' \cdot G'K : AG \cdot GK$ , and AK is a straight line of fixed length, and the rectangle of its segments is greatest when it is bisected. Therefore the greatest triangle of the series is that of which the base bisects AK.

6400. (J. HAMMOND, M.A.)—Prove that the surface

$$x^3 + y^3 + z^3 - 3xyz = a^3$$

is one of revolution, and find its axis and the equation of the generating curve (referred to its asymptotes as axes).

Solution by JAMES BLAIKIE, M.A.; H. M. TAYLOR, M.A., F.R.S.; Professor JAN DE VRIES; and others.

This equation may be written

$$(x + y + z) \times (x^2 + y^2 + z^2 - yz - zx - xy) = a^3,$$

$$\text{or } (x + y + z) \times \{3(x^2 + y^2 + z^2) - (x + y + z)^2\} = 2a^3.$$

This meets the plane  $x + y + z = p\sqrt{3}$  in a circle of the sphere

$$p\sqrt{3} \{3(x^2 + y^2 + z^2) - 3p^2\} = 2a^3.$$

The surface is therefore one of revolution, the axis being the line  $x = y = z$ . If  $r$  be the radius of the circle above mentioned, then we may write

$$x^2 + y^2 + z^2 = r^2 + p^2,$$

where  $p$  is the perpendicular on the cutting plane, and the equation takes the form  $p^2 = 2a^3/(3\sqrt{3})$ . This is clearly the equation to the generating curve, in which any plane through the axis meets the surface,  $p$  and  $r$  being rectangular coordinates. It is easily seen that this curve has two infinite branches on the same side of the intersection with the plane  $x + y + z = 0$ , and on opposite sides of the line  $x = y = z$ . The surface of revolution is therefore in the form of a trumpet with mouthpiece and rim both at infinity, the axis being asymptotic to the tube, and the plane  $x + y + z = 0$  to the rim.

14466. (Rev. A. M. WILCOX, M.A.)—Four pennies are placed flat on a table so that each touches two of the others. Find when the space enclosed between them is a maximum or minimum.

Solution by Prince C. DE POLIGNAC; J. H. TAYLOR, M.A.; and others.

The space enclosed is equal to the area of the lozenge formed by joining the centres of the four circles represented by the pennies, minus the sum of the four circular sectors thus obtained, which latter is constant, as the sum of the angles of the lozenge is constant. Hence the maximum of the space enclosed coincides with the maximum of the lozenge, and occurs when such lozenge is a square ( $\theta = \frac{1}{2}\pi$ ).

The same can be seen graphically. Every possible modification of the figure is identical with one in which one side of the lozenge remains fixed; that is to say, two of the pennies, say 1 and 2, remain fixed, while pennies 3 and 4 roll together backwards and forwards, on 1 and 2. Now, starting with the figure in which the centres form a square, if the top pennies are made to roll a little to the right or a little to the left, the spaces enclosed will be identical by reason of absolute symmetry. Hence the space corresponding to the square lies between two indefinitely near equal spaces. By a known principle, it is then a maximum or a minimum, and the graphic construction shows it to be a maximum, the minimum corresponding to the final position in which two of the pennies touch the other three ( $\theta = \frac{1}{2}\pi$ ).

14365. (Professor COCHEZ.)—Lieu des foyers des hyperboles tangentes

à l'origine à l'axe des  $x$  et ayant une asymptote perpendiculaire à l'axe des  $x$ .

*Solution by Professor SANJANA, M.A.*

O being origin, OA (=  $a$ ) axis of  $x$ , AB the asymptote, S either focus, and MSN ordinate, we have

$$\begin{aligned} \angle ASO &= \angle ASN \\ &= \pi - \angle ASM \\ \text{or} &= \pi - \angle ASN \\ &= \angle ASM, \end{aligned}$$

according as AO touches nearer or further branch. This leads to

$$\begin{aligned} \angle SOA + 2\angle SAO &= \frac{1}{2}\pi \text{ or } \frac{3}{2}\pi; \end{aligned}$$

hence, in both cases,  $\tan SOA \cdot \tan 2SAO = 1$ .

If, then,

$$\begin{aligned} OM &= x \\ \text{and } SM &= y, \end{aligned}$$

$$\text{we have } \frac{y}{x} \frac{2y(a-x)}{(a-x)^2 - y^2} = 1, \text{ that is, } \frac{x}{2a-x} = \frac{y^2 + x^2}{a^2}.$$

Thus either focus lies on a cubic passing through the origin, touching the axis of  $y$ , having a node at  $x = a$  and an asymptote  $x = 2a$ .

**14263.** (D. BIDDLE.)— $T$  is a multiple of  $(N-T)^2$ : prove that  $N$  is factorizable, unless  $N-T = 1$ ; and, conversely, that  $N$  is either a prime or the square of a prime, when no lower value of  $T$  than  $N-1$  will fulfil the conditions.

*Solution by H. A. WEBB; Lt.-Col. ALLAN CUNNINGHAM, R.E.; and G. H. HARDY, B.A.*

Let  $(N-T)^2 = P$ , and  $T = PQ$ ,  $P$  and  $Q$  being positive integers. Then  $N = P^2 + T = P^2 + PQ = P(P+Q)$ . Hence  $N$  is factorizable, unless  $N-T = P^2 = 1$ .

In the second case, the condition  $T = Q \times (N-T)^2$  is not satisfied by a lower value of  $T$  than  $(N-1)$ . Hence  $T = N-1$ , or  $T = N$ , or  $Q = 0$ , and only under one of these three conditions does the equation  $N = P(P+Q)$  hold good. The first condition gives  $Q = N-1$ , and, since  $P(P+N-1) = N$ , we must have  $P = 1$ . The second condition gives  $N = 0$ . The third condition gives  $N = P^2$ . Hence the only possible factors of  $N$  are  $N$  and 1, or  $P$  and  $P$ :  $N$  is therefore a prime, or the square of a prime.

[The rest in Volume.]

**14465.** (Rev. T. ROACH, M.A.)—In a parabola, PG, PM, PR are perpendicular to PT, PX, PA. Find the condition that M bisects GR.

*Solution by R. TUCKER, M.A.; LIONEL E. REAY, B.A.; and many others.*

NR = latus rectum = 4AS, and NG = 2AS;  $\therefore$  NM = 3AS. But NM.NX = PN^2 = 4AS.AN;  $\therefore$  3NX = 4AN;  $\therefore$  AN = 3AS;  $\therefore$  SP = latus rectum, and  $\triangle$ SPG is equilateral.

**6172.** (J. J. WALKER, M.A.)—The sides of a triangle repelling with a force varying inversely as the cube of the distance (as in Quest. 6120), show that the attractions of the three sides on a particle situate at the centre of the inscribed circle are reducible to three forces perpendicular to the sides and proportional respectively to the angles which they subtend at that point. [With the solution to this Question, we shall be glad to receive a solution, partial or complete, of the connected Quest. 6120 (by the late Professor W. K. CLIFFORD, F.R.S.), which is as follows:—“The sides of a triangle repel with a force varying inversely as the cube of the distance: (1) find the position in which a particle will rest; also (2) supposing the faces of a tetrahedron to repel according to the same law, find where a particle will rest.”]

*Solution by Professor T. W. EDMONDSON.*

(6172.) Consider the repulsion at I due to the side BC.

Take an element PQ (=  $dx$ ) in BC, and join IP, IQ, cutting the circumference of the incircle in  $p, q$ , respectively.

Let the angle DIP =  $\theta$ , and let the mass of each side per unit length be  $m$ .

Then repulsive force of PQ

$$= \frac{m dx}{IP^3} = \frac{m dx}{r^3 \sec^3 \theta}$$

Draw PR perpendicular to IQ, and let PR =  $dx'$ ;

$$dx/dx' = \sec \theta \text{ and } dx'/(r d\theta) = IP/IP = \sec \theta;$$

therefore

$$dx = r \sec^2 \theta d\theta.$$

Hence repulsive force of PQ =  $m/r^2 \cos \theta d\theta$ ; and we have component of repulsion due to BD

$$\text{in direction DI} = \frac{m}{r^2} \int_0^{\frac{1}{2}\pi - B} \cos^2 \theta d\theta = \frac{m}{2r^2} \{ \frac{1}{2}(\pi - B) + \sin \frac{1}{2}B \cos \frac{1}{2}B \},$$

$$\text{in direction BD} = \frac{m}{r^2} \int_0^{\frac{1}{2}\pi - B} \sin \theta \cos \theta d\theta = \frac{m}{2r^2} \cos^2 \frac{1}{2}B.$$

We shall have similar expressions for the repulsion-components of DC, CE, EA, &c.

[The rest in Volume.]

**4381.** (ARTEMAS MARTIN, M.A., Ph.D.)—A sphere of radius  $r$  rolls down the surface of another sphere of radius  $R$ , placed on a horizontal plane. The surfaces of both spheres and plane are rough enough to ensure perfect rolling. Find the point of separation of the spheres and the path of the centre of the upper one.

*Solution by Professor SEBASTIAN SICCOM, M.A.*

Supposing the motion to start from the position in which the line joining the centres is vertical; the equation of energy is

$$M(K^2 + R^2) \dot{\theta}_1^2 + m(\dot{x}^2 + \dot{y}^2 + \dot{z}^2) = 2mg(r + 2R - y),$$

where  $\theta_1, \theta, \phi$  are the angles made with the vertical at the time  $t$  by the radii which were initially together, and by the line joining the centres at the time  $t$ . Taking the origin at the original point of contact of the lower sphere with the plane, we have, for the point O,

$$x = (r + R) \sin \phi - R\theta_1,$$

$$r(\theta - \phi) = R(\theta_1 + \phi);$$

whence  $y = (r + R) \cos \phi + R$ ,

$$R\theta_1 = r\theta - (r + R)\phi.$$

Let  $P$  be the normal pressure,  $F$  the friction at C. Then, for the lower sphere,

$$M(K^2 + R^2) \ddot{\theta}_1 = PR \sin \phi - FR(1 + \cos \phi) \dots \dots \dots (2);$$

for the upper,

$$m\ddot{x} = P \sin \phi - F \cos \phi, \quad m\ddot{y} = P \cos \phi + F \sin \phi - mg, \quad mk^2 \ddot{\theta} = Fr \dots \dots \dots (3, 4, 5);$$

whence  $M(K^2 + R^2) \ddot{\theta}_1 = mR\ddot{x} - mk^2(R/r) \ddot{\theta}$ ;

and, since  $\theta, \theta_1, x, \dot{\theta}, \dot{\theta}_1, \dot{x}$  all vanish together,

$$M(K^2 + R^2) \theta_1 = mR\dot{x} - mk^2(R/r) \dot{\theta}.$$

[The rest in Vol.]

**14361.** (Professor E. LEMOINE.)—Dans un triangle ABC inscrit un triangle A'B'C' semblable à un triangle donné et tel que ABC et A'B'C' soient orthologiques. On sait que deux triangles ABC, A'B'C' sont dits orthologiques si les perpendiculaires abaissées des sommets de l'un sur les côtés de l'autre sont concourantes.

*Solution by A. F. VAN DER HEYDEN, B.A.; and H. W. CURJEL, M.A.*

Within the angle ABC, find a point H at which the sides subtend angles supplementary to those of the second triangle (III. 33). Draw any line DE perpendicular to AH. Draw DL, EL perpendicular to AB, AC. It is easily seen that the locus of L is the straight line AL.

Find BM, the corresponding locus through B, and let AL, BM intersect in K. Draw KA', KB', KC' perpendicular to the sides of the triangle. Then A'B'C' is the triangle required.

Obviously, AH, BH are perpendicular to B'C, C'A'. Hence, from

the reciprocity of orthological properties, CH must be perpendicular to A'B'. Therefore also the triangle A'B'C' is similar to the given triangle, as required.

**14224.** (Professor CROFTON, F.R.S.)—Four points are taken at random in a triangle. Find the chance that the point nearest to the side AB shall also be the nearest to AC. (*Ans.*,  $\frac{1}{3}$ .) By means of this, an elementary proof may be given that the chance of a convex quadrilateral is  $\frac{1}{3}$ .

*Solution by Rev. W. A. WHITWORTH, M.A.*

More generally, if  $n$  points be taken, the chance will be  $1/(2n-1)$ .

We know that, if P be a random point on a line OQ =  $a$ , the expectation of  $OP^m$  will be  $a^m/(m+1)$ . (*Expectation of Parts*, Prop. iv.)

Let P be the point nearest to AB. Draw OPQ parallel to AB and PZ parallel to AC. Since P is the point nearest to AB, the other  $n-1$  points must lie on the area OQC, and, if P is to be also nearest to AC, they must lie on the area OPZ.

But the chance that one falls on the latter area is  $OP^2/OQ^2$ ; and the chance that all fall thereon is  $OP^{2n-2}/OQ^{2n-2}$ ; and, by the proposition cited, the expectation of this is  $1/(2n-1)$ , which is therefore the chance required.

[The rest in Volume.]

**QUESTIONS FOR SOLUTION.**

**14510.** (Professor MATHEWS, M.A., F.R.S.)—Suppose that the Jacobian transformation of the sixth order converts  $\kappa, K$  into  $\lambda, \mu K$  respectively; prove that

$$\sin \frac{2K}{3} = \sqrt{\frac{3}{2}} \left\{ \sqrt{\frac{\mu}{1+\kappa'}} + \sqrt{\frac{\lambda\mu}{1-\kappa'}} \right\}.$$

**14511.** (JOHN C. MALET, M.A., F.R.S.)—If in the sextic algebraic equation  $x^6 - p_1x^5 + p_2x^4 - p_3x^3 + p_4x^2 - p_5x + p_6 = 0$ ,

the sum of three roots is equal to the sum of the other three, (1) prove

$$4p_6Q_4 - 4Q_4Q_3^2 - p_6Q_2^2 + p_5Q_2Q_3 - p_5^2 = 0,$$

where  $Q_2 \equiv p_2 - \frac{1}{3}p_1^2$ ,  $Q_3 \equiv p_3 - \frac{1}{2}p_1p_2 + \frac{1}{3}p_1^3$ ,  $Q_4 \equiv p_4 - \frac{1}{2}p_1p_3 + \frac{1}{4}p_1^2p_2 - \frac{1}{8}p_1^4$ ; (2) solve the equation.

**14513.** (Professor F. MOHRLY.)—In the figure OX, OY are vertical walls at right angles; A is the corner of an obstacle. Find the largest rectangle which can pass, in a horizontal plane, between the walls and the obstacle; taking the case when the length of the rectangle is twice its breadth.

**14514.** (Professor COCHEZ.)—Courbe  $\rho = \tan \omega \tan 2\omega$ .

**14515.** (J. A. THIRD, M.A., D.Sc.)—X, Y, Z are three points in the plane of a triangle ABC, such that the pairs AY and AZ, BZ and BX, CX and CY are equally inclined to the bisectors of the angles A, B, C respectively. Y moves on the straight line  $u_b$ , and Z on the straight line  $u_c$ . Prove the following statements:—(1) the locus of X is a straight line  $u_a$ ; (2) if  $u_b$  pass through B, and  $u_c$  through C,  $u_a$  passes through A; (3) if  $u_b$  be perpendicular to CA, and  $u_c$  to AB,  $u_a$  is perpendicular to BC; (4) if L, M, N be the points where  $u_a, u_b, u_c$  meet BC, CA, AB respectively, AL, BM, CN meet in a point P; (5) AX, BY, CZ are concurrent in a point whose locus is, in general, a conic circumscribed to the triangle and passing through P; (6) if  $u_b, u_c$  meet on the cubic circumscribed to the triangle, and passing through every pair of isogonal points whose join passes through P, viz.

$$l\{(y^2-z^2)/yz\} + m\{(z^2-x^2)/zx\} + n\{(x^2-y^2)/xy\} = 0,$$

where  $l, m, n$  are the co-ordinates of P,  $u_a, u_b, u_c$  are concurrent.

**14516.** (Professor JAN DE VRIES, Ph.D.)—For each conic of a given pencil the orthoptical circle (circle of MONGE) is constructed. How many of these circles will pass by a given point?

**14517.** (Professor SANJANA, M.A.)—In the triangle ABC, AD is drawn from A dividing BC in the ratio  $m : n$ ; AE and AE' are the internal and external bisectors of the angle A. Prove that

$$AD \cos DAE = \{(n \cdot AB + m \cdot AC)/(m+n)\} \cos \frac{1}{2}A,$$

and  $AD \cos DAE' = \{(n \cdot AB - m \cdot AC)/(m+n)\} \sin \frac{1}{2}A.$

Also apply these equalities to find the distances of the centroid from the incentre and the excentres; and show that the sum of the squares of these four distances is  $16R^2 - \frac{1}{3}(a^2 + b^2 + c^2)$ .

**14518.** (Professor A. GOLDENBERG.)—Résoudre le système

$$(x+2y)(x+2z) = a^2, \quad (y+2z)(y+2x) = b^2, \quad (z+2x)(z+2y) = c^2.$$

**14519.** (Professor U. C. GHOSH.)—Find the sum of the products of the terms of the geometric series  $a, a^2, a^3, a^4, \dots, a^n$ , taken  $r$  at a time,  $r$  being less than  $n$ .

**14520.** (Professor N. BHATTACHARYYA.)—Required a direct proof of the old problem:—If the bisectors of the base angles of a triangle, being terminated at the opposite sides, be equal, show that the triangle is an isosceles one. (See TODHUNTER'S *Euclid*.)

**14521.** (D. BIDDLE.)—[In continuation of Quest. 14457 and 14490.] Writing down N in terms of 3 and its powers, the only coefficients used being  $\pm 1$  or 0, it will be convenient to omit both index and root, using only the sign preceding (or 0), and reckoning the powers from the right hand (as usual). Thus,  $1843 = 3^7 - 3^5 - 3^4 + 3^2 - 3 + 1$ , and it may be written  $+0 - 0 + - +$ . Similarly, 1769 may be written  $+ - + 0 - -$ . Since the last sign is for  $3^0 (= 1)$ , the first index is one less than the number of signs (including zeros). Prove that, having bracketed together any number of the given signs beginning with the first (which is always positive), and having assigned to them the value they would have if standing alone, we can, to the successive signs beyond, append  $p, p^2, p^3, \dots$  in ascending order, and thus obtain a multiple of  $3p \pm 1$ , a factor of N ( $p$  being even), provided we reverse the signs attached to the odd powers of  $p$  when the factor is  $3p + 1$ , but leave them unchanged when the factor is  $3p - 1$ . Thus,  $1769 = (+ - + + 0) - (- -)$ , and  $66 + 20 - 400 + 8000 = M(61)$ ; also  $66 - 10 - 100 - 1000 = M(29)$ .

**14522.** (J. H. TAYLOR, M.A.)—If A, B, C are vertices of equilateral triangles described all externally, or all internally, on the sides of a triangle A'B'C', and A<sub>a</sub>, B<sub>b</sub>, C<sub>c</sub> are diameters of circle circumscribing those equilateral triangles, then AA', BB', CC' are equal and concurrent, and a, b, c form an equilateral triangle and are middle points, each of a pair of arcs, on sides of the triangles ABC, A'B'C'. [The PROPONER desires that the words "equal and" be omitted from Quest. 14493.]

**14530.** (ROBERT W. D. CHRISTIE.)—If  $6m + 1 = a$  prime, prove  $r^{2m} + r_1^{2m} \equiv 0 \pmod{p}$  and  $r_1^{2m} + r^{2m} \equiv 0 \pmod{p}$ , where  $r$  and  $r_1$  are associated primitive roots.

**14531.** (J. J. BARNVILLE, B.A.)—Prove that

$$\begin{aligned} \frac{1}{1+2} + \frac{1}{7+2} + \frac{1}{97+2} + \frac{1}{1351+2} + \dots &= \frac{\sqrt{3}+1}{6}, \\ \frac{1}{1+\sqrt{5}} + \frac{1}{9+\sqrt{5}} + \frac{1}{161+\sqrt{5}} + \frac{1}{2889+\sqrt{5}} + \dots &= \frac{\sqrt{5}+1}{8}, \\ \frac{1}{1+\sqrt{6}} + \frac{1}{11+\sqrt{6}} + \frac{1}{241+\sqrt{6}} + \frac{1}{5291+\sqrt{6}} + \dots &= \frac{\sqrt{6}+\sqrt{5}-1}{10}, \\ \frac{1}{1+\sqrt{7}} + \frac{1}{13+\sqrt{7}} + \frac{1}{337+\sqrt{7}} + \frac{1}{8749+\sqrt{7}} + \dots &= \frac{\sqrt{7}+\sqrt{6}-1}{10}. \end{aligned}$$

**14532.** (Rev. J. CULLEN.)—Let  $\Delta$  be any conic in the plane of a given triangle ABC. A point P is taken on  $\Delta$ , and parallels through P to BC, CA, AB meet  $\Delta$  again in  $A'$ ,  $B'$ ,  $C'$ . Prove that AP, BP, CP intersect  $B'C'$ ,  $C'A'$ ,  $A'B'$  in three collinear points L, M, N. (A particular case is that the intersections of the symmedian lines with the corresponding sides of BROCARD'S triangle are collinear.)

Prove also that, if  $\Delta$  be the circumcircle, then LMN is at right angles to the SIMSON-LINE of P.

**14533.** (Rev. T. WIGGINS, B.A.)—Express the numbers 131, 133, 137, 139 by four nines. Algebraical symbols and decimal points may be used, but the expression for each number must contain the four nines and no other figure. Also, express the number 113 by four fours, with similar conditions. (The above is part of Quest. 6487, which was re-proposed in the March number.)

**14534.** (W. S. COONEY.)—Let  $O_1, O_2, O_3$  be the centres of squares described externally, and  $\omega_1, \omega_2, \omega_3$  the centres of squares described internally on the sides  $a, b, c$ , respectively of triangle ABC. Join  $O_1$  to  $\omega_2$  and  $\omega_3$ , meeting side BC in P, P';  $O_2$  to  $\omega_3$  and  $\omega_1$ , meeting CA in Q, Q';  $O_3$  to  $\omega_1$  and  $\omega_2$ , meeting AB in R, R'. Prove that  $A', B', C'$ , the intersections of P'R, Q'P, R'Q are the centres of the insquares of ABC, and that, if AA', BB', CC' meet sides of  $A'B'C'$  in  $\alpha, \beta, \gamma$ , then triangle  $\alpha\beta\gamma$  is similar to ABC.

**14535.** (R. KNOWLES.)—A circle touches a parabola in a point P, and cuts it in C, D; prove (1) that the line joining the pole of CD, with respect to the parabola, to P is bisected by the axis; (2) if the circle pass through the focus, CD passes through a fixed point on the axis.

**14536.** (I. ARNOLD.)—In any triangle the radius of the circumscribed circle is to the radius of the circle which is the locus of the vertex, when the base and the ratio of the sides are given, as the difference of the squares of those sides is to four times the area.

**14537.** (R. CHARTRES.)—A point P is taken at random in a polygon ABCD... of  $n$  sides. What is the probability that, if  $n$  other random points be taken, one shall lie in each of the triangles APB, BPC, &c.?

**14538.** (SALUTATION.)—Arrange in one plane two triangles of given dimensions in such manner that two specified vertices may coincide, and the other four be concyclic.

**14539.** (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—If  $r$  and  $n$  be any positive integers, show that the sum of the series

$$1^r + 2^r + 3^r + 4^r + \dots + n^r$$

is a fraction, whereof the numerator is exactly divisible by  $n$ , and the denominator is some integer independent of  $n$ .

#### OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

**6498.** (J. W. RUSSELL, M.A.)—Show that

$$5(a+b+c)^2(a+b)^2(b+c)^2(c+a)^2 - 3a^2(a+b)^3(a+c)^3$$

is divisible by  $(a+b+c)^2 + abc$ .

**6514.** (W. J. C. MILLER, B.A.)—Find, to 4 decimals, the value of

$$\int_0^1 \int_0^{1-x} \int_0^{1-x-y} dx dy dz \frac{3xyz(1-x-y-z)}{(1-x)(1-y)(1-z)(x+y+z)}.$$

**6515.** (ELIZABETH BLACKWOOD.)—C is the centre of a given circle, X, Y are random points in the area, and P is any point in the circumference; two concentric circles, with radii CX, CY, divide CP into three segments: find the chance that these three segments can be the sides of an acute-angled triangle.

**6530.** (W. E. WRIGHT, B.A.)—Two vertices of a given triangle move along a diameter of an ellipse and the periphery respectively; find the locus of the third vertex.

**6531.** (Professor SYLVESTER, F.R.S.)—Prove that only one proper circular cubic can be drawn having four concyclic foci at the angles of a trapezoid. (May be solved with Quest. 6405, re-proposed in *Ed. Times* of March, 1900.)

**6535.** (Professor TOWNSEND, F.R.S.)—Three forces, given or taken arbitrarily in a common space, being supposed transferred to the centre of the quadric determined by their three lines of direction in the space; show, on elementary principles, that the plane of their resultant moment is always conjugate to the direction of their resultant force with respect to the surface.

#### NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

**NOTICE.**—Vol. LXXII. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

#### THE LONDON MATHEMATICAL SOCIETY.

Thursday, March 8, 1900.—Prof. Elliott, F.R.S., Vice-President, in the Chair. Fifteen members present.

The Chairman announced that, in accordance with a resolution of the Council, the meetings in future would be held at 5.30 p.m., instead of 8 p.m. as heretofore, and that the May meeting (at 5.30 p.m.) would be made "special" in order to alter the by-law as to the hour of holding the Annual General Meeting.

Votes of condolence with the families of the late Prof. Beltrami and Mr. J. J. Walker were carried, and the Senior Secretary was directed to convey the announcement of the same to the proper quarters.

Prof. Lamb read a paper, "Problems relating to the Impact of Waves on a Spherical Obstacle in an Elastic Medium." Dr. Larmor spoke on the subject.

Mr. W. F. Sheppard (Prof. Lamb, V.P., in the Chair) spoke "On the Use of Auxiliary Curves in Statistics; with Tables for the Curve of Error." Messrs. Lamb, MacMahon, and Hargreaves joined in a discussion of the paper.

A "Supplementary Note on the Theory of Automorphic Functions," by Prof. A. C. Dixon, was taken as read.

## SEELEY'S CHEAP SCHOOL SERIES.

Conducted by the REV. A. J. CHURCH, M.A., sometime Professor of Latin at University College, London.

Each Volume contains sufficient matter for the work of one term, with notes by a competent Editor of practical experience in tuition; and is well printed and strongly bound in cloth.

**Ovid.** *Elegiac Verse.* With Vocabulary. By Prof. CHURCH. 8d.

**Ovid.** *Metamorphoses.* With Vocabulary. By Rev. NORTH PENNER. 8d.

**Horace.** *Select Odes.* By Rev. W. J. BRODRIBB. 8d.

**Cæsar.** *Selections.* By Rev. F. B. BUTLER. 8d.

**Cicero.** *Select Passages.* By Rev. W. J. BRODRIBB. 10d.

**Livy.** *Select Passages.* By Rev. J. H. MERRITT. 8d.

**Phædrus.** *Select Fables.* With Vocabulary. By E. WALFORD. 8d.

**Cornelius Nepos.** *Select Lives.* With Vocabulary. By E. WALFORD. 8d.

**A Latin Delectus.** By C. OAKLEY. 8d.

**Easy Latin Reading Book.** By Rev. H. M. STEPHENSON. 8d.

**A Latin Exercise Book.** Part I. By Prof. CHURCH. 8d.

**A Latin Exercise Book.** Part II. By Prof. CHURCH. 8d.

**Latin Prose through English Idiom.** By Rev. E. A. ABBOTT, D.D. 2s. 6d.

**First Latin Grammar.** By Dr. WHITE. 1s.

**Priora Latina.** A First Latin Book. By W. MODLEN. 1s.

**The Stories of the Iliad and the Æneid.**

A Classical Reading Book. By Prof. CHURCH. 1s.

**First Latin Dictionary.** By E. S. MORGAN. 1s. 6d.

**Milton.** "Comus." "Lycidas." &c. By Dr. HUCKIN. 8d.

**Milton.** "Samson Agonistes." By Prof. CHURCH. 1s.

**Cowper.** Two Books of "The Task." By Prof. HALES. 8d.

**Goldsmith.** "The Traveller." "Deserted Village." and "Retaliation." By Rev. A. R. VARDY. 8d.

**English Verse for Repetition.** Part I. By Rev. W. BEDELL STANFORD. 1s.

**English Verse for Repetition.** Part II. By Prof. CHURCH. 1s.

**Literary Selections for Practice in Spelling.** By R. LOMAS. 1s.

**Algebra.** By R. PROWDE SMITH. 1s.

**Euclid.** By L. B. SEELEY. 1s.

**Arithmetical Exercises.** By F. C. HORTON. 1s.

**French Grammar.** By HENRY TARVER. 1s. 6d.

#### NEW VOLUMES.

**LATIN VOCABULARIES.** Arranged according to subject. By A. W. READY, B.A. 16mo, cloth, 8d.

**LATIN EXERCISES.** Third Part. By Rev. A. J. CHURCH, M.A. 8d.

These two volumes may also be had, bound together in cloth, 1s.

"Mr. Church's elementary editions of Greek and Roman classics are so well known that it goes without saying that this book is excellently adapted for its purpose, i.e., for the use of pupils who have made a beginning in writing Latin. The hints on Latin prose in the introduction are clear and to the point."—*Journal of Education.*

#### DR. ABBOTT'S SCHOOL BOOKS.

**Via Latina.** A First Latin Book. 127th Thousand. 3s. 6d.

**How to Write Clearly.** Rules and Exercises on English Composition. 62nd Thousand. 1s. 6d., cloth.

**How to Tell the Parts of Speech; or, Easy Lessons in English Grammar.** 34th Thousand. 2s., cloth.

**How to Parse.** An Attempt to Apply the Principles of Scholarship to English Grammar. 32nd Thousand. 3s. 6d., cloth.

**English Lessons for English People.** By the Rev. EDWIN A. ABBOTT, D.D., and Prof. J. R. SEELEY, M.A. 17th Thousand. 4s. 6d.

LONDON: SEELEY & CO., LIMITED, 38 GREAT RUSSELL STREET.

## CAREY'S "GRADUS AD PARNASSUM,"

WITH THE ENGLISH MEANINGS.

Revised, Corrected, and Augmented by a Member of the University of Cambridge.

Post 8vo, cloth, Price 7s.

THE STATIONERS' COMPANY, STATIONERS' HALL, LONDON.

# MACMILLAN & CO.'S NEW EDUCATIONAL BOOKS.

## MACMILLAN'S MANUALS FOR TEACHERS.

**THE LOGICAL BASES OF EDUCATION.** By J. WELTON, M.A., Professor of Education in the Yorkshire College, Victoria University. Globe 8vo, 3s. 6d.  
\* \* This book meets the requirements of the Teachers' Certificate Examination.

*Educational Times.*—"Mr. Welton has written distinctively well on logic, but we are inclined to think that he has never produced anything better than this succinct and lucid exposition of the application of logical method to educational purposes. . . . The volume appears in a series of 'Manuals for Teachers.' . . . It will be an admirable series if the rest of the volumes come anywhere near the excellence of this one."

## TEACHERS' PROFESSIONAL LIBRARY.

**THE TEACHING OF ELEMENTARY MATHEMATICS.** By DAVID EUGÈNE SMITH, Principal of the State Normal School at Brockport, New York. Crown 8vo, 4s. 6d. net.

## GRADUATED SERIES OF ENGLISH GRAMMARS.

By J. C. NESFIELD, M.A. *For Use in Secondary Schools.*

**THE USES OF THE PARTS OF SPEECH.** Price 6d., cloth. A general outline, with a large number of Exercises, showing the main purpose or purposes for which each part of speech is used in the construction of a sentence. For the use of students up to the age of ten or thereabouts.

*Educational News.*—"That this grammar is the work of Mr. Nesfield is sufficient guarantee of its excellence."

**OUTLINE OF ENGLISH GRAMMAR.** Price 1s. 6d. cloth. A short and easy guide to Accidence, Parsing, Analysis of Sentences, Conversion of Sentences from one form to another, Sequence of Tenses, Analysis of Words, the Sounds, Symbols, and Spellings in present use, the origin and history of the chief inflexions and of words in common grammatical use. With copious and carefully graded Exercises throughout.

*Educational News.*—"It is easily the best work of its kind, and we give it our heartiest recommendation."

**MANUAL OF ENGLISH GRAMMAR AND COMPOSITION.** Price 2s. 6d., cloth. A guide to Parsing and Analysis, Composition, the Figures of Speech, Enlargement of the Vocabulary by Adjectives and Metaphors, the main divisions of Prose Composition, the peculiarities of Poetic Diction, and an outline of the History of the Language. With copious and carefully graded Exercises.

*Key to Manual of English Grammar and Composition.* 2s. 6d. net.  
*Guardian.*—"The whole of Mr. Nesfield's work is stamped with the impress of individual thought, and with the earnest desire to remove those absurdities of grammatical classification and terminology which are the despair of the teacher and one of the chief drawbacks to the attainment by English grammar and literature of that high place in the school curriculum which should naturally be its due."

**ENGLISH GRAMMAR PAST AND PRESENT.** Price 4s. 6d., cloth. A full account of Modern English Grammar, some peculiarities of Idiom and Construction, the Origin and Growth of English, a History of Sounds, Symbols, Spellings, and Accents, the Growth of Accidence from Anglo-Saxon and other sources, the origin and use of Prefixes and Suffixes. With Appendices on Prosody, Synonyms, the Changed Meanings of Words, and other outlying subjects. With copious and carefully graded questions selected from the London Matriculation Examinations.

*Educational Times.*—"His book gives evidence of good judgment and experience in teaching."

New and Abridged Edition.  
**EDWARD THRING, HEADMASTER OF UPPINGHAM SCHOOL. LIFE, DIARY, AND LETTERS.** By GEORGE R. PARKIN, C.M.G., M.A., Hon. LL.D. University of New Brunswick. With Portrait. Crown 8vo, 6s.  
*Spectator.*—"We heartily welcome this book in its present form. . . . Of latter-day biographies few are more admirable than this."

## CLASSICS.

MACMILLAN'S CLASSICAL SERIES.—New Volumes.

**EURIPIDES.—THE ANDROMACHE.** With an Introduction and Notes by A. R. F. HYSLOP, M.A., Assistant-Master in Harrow School. Fcap. 8vo, 2s. 6d.

**GREEK MELIC POETS.** By HERBERT WEIR SMYTH, Ph.D. Gottingen, Professor of Greek at Bryn Mawr College, Pennsylvania. Fcap. 8vo, 7s. 6d.

**DEMOSTHENES.—ON THE PEACE, SECOND PHILIPPIC, ON THE CHERONESUS, AND THIRD PHILIPPIC.** Edited, with Introduction and Critical and Explanatory Notes, by JOHN EDWIN SANDYS, Litt.D., Fellow and Tutor of St. John's College, and Public Orator in the University of Cambridge. Fcap. 8vo, 5s.

## MATHEMATICS AND SCIENCE.

**THE PRINCIPLES OF MECHANICS PRESENTED IN A NEW FORM.** By HEINRICH HERTZ, late Professor of Physics in the University of Bonn. With an Introduction by H. VON HELMHOLTZ. Authorized English Translation by D. E. JONES, B.Sc., District Inspector under the Department of Science and Art, &c., and J. T. WALLEY, M.A. 8vo, 10s. net.

*Engineer.*—"A very remarkable book. . . . It represents the latest work of one of the finest intellects of the century."

Enlarged and Revised Edition.  
**LESSONS IN ELEMENTARY PHYSIOLOGY.** By THOMAS H. HUXLEY, LL.D., F.R.S. Globe 8vo, 4s. 6d.

**AN ELEMENTARY COURSE OF PRACTICAL ZOOLOGY.** By the late Prof. T. J. PARKER, D.Sc., F.R.S., and Prof. W. NEWTON PARKER, Ph.D. With 156 Illustrations. Crown 8vo, 10s. 6d. [*Manuals for Students.*]

**THE NATURE AND WORK OF PLANTS:** an Introduction to the Study of Botany. By DANIEL T. MACDOUGAL, Ph.D., Director of the Laboratories, New York Botanical Garden. Crown 8vo, 4s. 6d.

**DRYDEN.—THE HIND AND THE PANTHER.** With Introduction and Notes by W. H. WILLIAMS, M.A., formerly Scholar of Trinity College, Cambridge, Professor of Classics and English Literature in the University of Tasmania. Globe 8vo, 2s. 6d. [*Macmillan's English Classics.*]

*Schoolmaster.*—"A skilfully written introduction of some dozen pages gives a clear and concise enumeration and criticism of the animal fable which the poem is in form. . . . The notes which follow the text are, as far as we have tested them, accurate and full."

**THE NERVOUS SYSTEM IN THE CHILD:** Its Growth and Health in Education. By FRANCIS WARNER, M.D. Lond., F.R.C.P., F.R.C.S. Eng. Crown 8vo, 4s. 6d. net.

## FRENCH.

**A HISTORICAL FRENCH GRAMMAR.** By Prof. ARSÈNE DARMESETER. Edited by Prof. ERNEST MURET and Prof. LÉOPOLD SUDRE. Authorized English Edition by Prof. ALPHONSE HARTOG. Crown 8vo, 12s. 6d.

*Educational Times.*—"MM. Muret and Sudre have done their work very thoroughly. . . . The outcome appears to be eminently satisfactory."

**SPECIMENS OF MODERN FRENCH PROSE.** Edited, with Biographical and Critical Notes, by H. E. BERTHOUD, Taylorian Teacher of French in the University of Oxford. Pott 8vo, 2s. 6d. [*Foreign School Classics.*]

### Latest Additions to Slepman's Elementary French Series.

**DAUDET.—LA TOUR DES MAURES.** Par ERNEST DAUDET. Adapted and Edited by A. H. WALL, M.A., Assistant-Master at Marlborough College. Globe 8vo, 2s.

**VERNE.—LE TOUR DU MONDE EN QUATRE-VINGTS JOURS.** Par JULES VERNE. Adapted and Edited by LOUIS A. BARBÉ, B.A., Headmaster of the Modern Language Department in the Glasgow Academy. Globe 8vo, 2s.

WORD AND PHRASE BOOK. Globe 8vo, sewed, 6d.

APRIL NUMBER NOW READY.

# THE SCHOOL WORLD.

A MONTHLY MAGAZINE OF EDUCATIONAL WORK AND PROGRESS. PRICE SIXPENCE.

Annual Subscription, including postage, 8s. net.

## UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A.

The Session began October 3rd, 1899. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the Subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a Department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts student, £11. 1s.; ditto for Intermediate Science or Medical student, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (beginning September 19), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the Prospectus, apply to

JOHN EDWARD LLOYD, M.A.,  
Secretary and Registrar

## BEDFORD COLLEGE, LONDON (FOR WOMEN).

YORK PLACE, BAKER STREET, W.

## ENTRANCE SCHOLARSHIPS.

The Henry Tate Scholarship in Science, annual value £50; a Proffer Scholarship in Science, annual value £48; a Reid Scholarship in Arts, annual value £31. 10s.; all tenable for three years, will be awarded on the results of the Examination to be held at the College on June 26th and 27th. Candidates must be under 19 years of age on the first day of the examination.

For further information apply to the PRINCIPAL.

## THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss M. PUNNETT, B.A. (Lond.).

The object of this College is to give a professional training to educated women who intend to teach. In addition to the course of training, it offers the advantages of a College life and one year's residence in Cambridge.

The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers, and are prepared for the Cambridge Teachers' Certificate (Theory and Practice). Ample opportunity is given for practice in teaching science, languages, mathematics, and the other usual school subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

## THE MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS.

SALUSBURY ROAD, BRONDESBUARY, LONDON, N.W.

Principal—Miss ALICE WOODS.

A Full Course of Professional Training is offered to ladies who desire to become Teachers in Secondary Schools or in Kindergartens.

The Course for students preparing for the Cambridge Teachers' Certificate or for the London Teachers' Diploma begins in September or January, and lasts for one or two years. The Course for Kindergarten students preparing for the Higher Certificate of the National Froebel Union begins in September, and takes two years and one term.

Ample opportunities are given for Practice in Teaching in the School and Kindergarten of 150 pupils on the premises, as well as in other Schools.

The Winkworth Hall of Residence, close to the College, accommodates 20 students.

Scholarships to the amount of £230, from public and private sources, are annually awarded.

For all particulars as to qualifications for entrance, terms, scholarships, &c., apply to Miss ALICE WOODS, at the College.

## THE

## FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

Chairman of the Committee—Mr. W. MATHER.

Treasurer—Mr. C. G. MONTEPIORE.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

## TRAINING COLLEGE FOR TEACHERS.

Principal—Madame MICHAELIS.

Mistress of Method—Miss E. E. LAWRENCE.

## KINDERGARTEN AND SCHOOL.

Headmistress—Miss M. BOYS SMITH.

Further particulars may be obtained on application to the PRINCIPAL.

## ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS IN SECONDARY SCHOOLS AND IN FAMILIES.

—This College provides a complete Course of Professional Training for Women Teachers, in preparation for the Cambridge Teachers' Certificate. The Course includes attendance at the University, Lectures on Education, in addition to Lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class-Teaching in Schools. Five Heriot Bursaries of £30 are offered in October. Apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

## THE ANSTEY PHYSICAL TRAINING COLLEGE

OFFERS a professional Training in Swedish Gymnastics (both educational and medical) to Ladies of good education.

The Course begins in September, and lasts two years. Age of admission, 18 to 30. The work is particularly interesting and healthful, and is remunerative, there being more openings for trained teachers than can be filled.

Apply, for illustrated prospectus, to THE PRINCIPAL, The Leasowes, near Halesowen, Worcestershire.

## JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

## THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

- Headmasters' Conference.
- Incorporated Association of Headmasters.
- College of Preceptors.
- Teachers' Guild.
- Welsh County Schools' Association.
- Private Schools' Association.
- Association of Headmasters of Preparatory Schools.
- Association of Headmasters of Roman Catholic Schools.
- Assistant-Masters' Association.
- Association of Technical Institutions.
- &c. &c.

The rates of Commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

## SEATON, DEVON (Seaside), SCHOOL FOR GIRLS.

Pupils under 12 years of age, £36 a year.

Pupils from 12 to 16, £46 a year.

Pupils over 16, £56 a year.

No extras. Resident Governesses.

Drawing, Painting, and Music taught by Visiting Masters.

Apply to the Principal, Miss MARY GROVER, Seaton, Devon.

## ARMY SCHOOLMASTERS.—There

are a few vacancies in the Corps of Army Schoolmasters. Civilian Schoolmasters only will be accepted who have passed on second year's papers in the First or Second Division, or who hold a certificate, qualifying them to superintend pupil teachers, from the Committee of Council on Education. Students in Training Colleges will also be accepted under certain conditions. Candidates must not be over twenty-four years of age. Further particulars can be obtained on application, in writing, to the DIRECTOR OF ARMY SCHOOLS, War Office, London, S.W.

## SHORT FRENCH EXAMINATION PAPERS (110),

Each containing Six Idiomatic Sentences to render into French.  
Price 2s. 6d., cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

"A very useful set of questions."—*Modern Language Quarterly*.  
"The English idioms for translation into French are well chosen. It is a useful little book."—*University Correspondent*.  
"The exercises in the use of idioms are specially good."—*Bookman*.  
"Will be found serviceable for rapid drill in the hands of a judicious teacher."—*Educational Times*.

"Would afford useful practice for intending candidates."—*Education*.  
"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*Journal of Education*.

"We are great advocates of abundant exercises; hence our immediate approval of this book."—*School Guardian*.

"We have much pleasure in recommending this useful collection of papers in grammar and idiomatic sentences. It will save the teacher many an hour of labour, and would be valuable for a class entering for an examination to work through steadily."—*Educational Review*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers. 6s. net. (A list of errata is issued with this.)

By H. R. LADELL, M.A., F.R.G.S.

## THE PUBLIC SCHOOL SPELLING CARD.

*Thirtieth Thousand. Price 6d. By the same Author.*

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than fifteen years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

## French Essentials and French Conversation Sentences.

Second Edition. Price 2s. cloth; 1s. 6d. boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education*.

"Students preparing for examination in French grammar and composition will know the worth of this little book. The colloquial sentences at the end are a useful addition."—*Bookman*.

London: RELFE BROTHERS, Ltd., 6 Charterhouse Buildings, Aldersgate, E.C.

*Seventh Edition.* With an Appendix of Easier Exercises.

Fcap. 8vo, cloth, price One Shilling.

## HINTS ON FRENCH SYNTAX.

By F. STORR,

Chief Master of Modern Subjects in Merchant Taylors' School.

"The merit of the book is its simplicity and brevity, and we have no hesitation in saying that these *Hints* would prove a valuable supplement to any grammar that might be in use. . . . Neatly printed in clear, bold type, and interleaved throughout, this book is one we can confidently recommend not only to teachers for class use, but as an invaluable aid to students preparing for the Scholarship, Certificate, and London Matriculation Examinations."—*The Practical Teacher*, January, 1900.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

 Headmasters should apply for

# JACKSON'S COPY BOOKS

STILL AT THE TOP.

**“A VERY WONDERFUL TRIUMPH.”**

**Jackson's System**

OF

**UPRIGHT PENMANSHIP**

IN RELATION TO

**“GREAT THOUGHTS” HANDWRITING COMPETITION.**

The **recent Competition** instituted by the proprietors of “Great Thoughts” gives the most surprising and decisive testimony to the inherent merits and unapproached superiority of Upright Penmanship. The fact that this Competition was open to all without favour or distinction, and that it was absolutely independent in its character, only emphasises the contrast and enhances the success of the **Vertical Writers**. It is hardly necessary to state that Mr. Jackson was not connected in any way whatever with this Competition, the promoters and adjudicators of which are utterly unknown to him.

SIX PRIZES, only, were offered to the three girls and the three boys who produced the best written transcriptions of a prose passage chosen by the Editor. THOUSANDS of competitors of both sexes sent up their work, and the report states that the task of adjudication was a most difficult one. FIVE out of the SIX PRIZE WINNERS came from five separate schools, and EACH ONE OF THOSE SCHOOLS adopted the Jackson System of Upright Penmanship many years ago, with the most gratifying results. The Winning Schools, as given in “Great Thoughts,” are here subjoined, together with their achievements in Vertical Handwriting. THE COINCIDENCE IS UNIQUE IN THE HISTORY OF PENMANSHIP.

1ST PRIZE (GIRLS).

**SIR JOSIAH MASON'S ORPHANAGE, BIRMINGHAM.**

(Grand Silver Challenge Shield-Holder for 1899-1900, and Winner of 399 Prizes and Certificates in Jackson's Imperial Competitions since 1894.)

1ST PRIZE (BOYS).

**SEAHAM HARBOUR NATIONAL SCHOOL.**

(Grand Silver Challenge Shield-Holder for 1897-8, and Winner of 766 Prizes and Certificates in Jackson's Imperial Competitions since 1889.)

2ND PRIZE (GIRLS).

**NORMA SCHOOL, WATERLOO, LIVERPOOL.**

(Grand Silver Challenge Shield-Holder for 1898-9, and Winner of 234 Prizes and Certificates in Jackson's Imperial Competitions since 1894.)

2ND PRIZE (BOYS).

**SOUTH HETTON BOYS' SCHOOL.**

(Winner of 413 Prizes and Certificates in Jackson's Imperial Competitions since 1891.)

3RD PRIZE (GIRLS).

**LADIES' SCHOOL, 21 ST. MICHAEL'S ROAD, WALLINGTON.**

(Winner of 90 Prizes and Certificates in Jackson's Imperial Competitions since 1888.)

**The above-named Schools also secured 51 out of the 247 Certificates of Merit awarded.**

NOTE.—The Winner of the Boys' 3rd Prize was 13 years old, had left School, and did not write in the Vertical Style.

For Prospectus, Prize List, Specimen Books, and all particulars of Jackson's System of Upright Penmanship, apply to the Publishers,

**SAMPSON LOW, MARSTON & CO., Ltd., St. Dunstan's House, London, E.C.**

# MR. EDWARD ARNOLD'S LIST.

A COMPLETE EDUCATIONAL CATALOGUE WILL BE FORWARDED POST FREE ON APPLICATION.

London: EDWARD ARNOLD, 37 Bedford Street, Strand.

# Blackwoods' Literature Readers.

Edited by JOHN ADAMS, M.A., B.Sc., F.C.P., Rector of the Free Church Training College, Glasgow.

*The Series consists of Four Volumes.*

**Book I.** 228 pp. ... Price 1s. | **Book III.** 303 pp. ... Price 1s. 6d.  
**Book II.** 275 pp. ... Price 1s. 4d. | **Book IV.** 381 pp. ... Price 1s. 6d.

"The volumes, which are capitally printed, consist of selected readings of increasing difficulty, to which notes and exercises are added at the end. The selected pieces are admirably chosen, especially in the later books, which will form a beginning for a really sound and wide appreciation of the stores of good English verse and prose."  
*—Athenaeum.*

"The selected readings... are interesting, and possessed of real literary value. The books are well bound, the paper is excellent, and the unusual boldness and clear spacing of the type go far to compensate for the entire absence of pictorial illustrations."  
*—Guardian.*

"A very excellent gradus to the more accessible heights of the English Parnassus. The appendices on spelling, word-building, and grammar are the work of a skilful, practical teacher."  
*—Pall Mall Gazette.*

"If we had the making of the English Education Code for Elementary Schools, we should insert a regulation that all boys and girls should spend two whole years on these four books, and on nothing else."  
*—Bradford Observer.*

## BLACKWOODS'

## ILLUSTRATED CLASSICAL TEXTS.

General Editor—H. W. AUDEN, M.A., Assistant-Master at Fettes College.

NOW READY.

**Cæsar—Gallic War. Books IV., V.** By ST. J. B. WYNNE WILLSON, M.A., Assistant-Master at Rugby. *With or without Vocabulary.* 1s. 6d.

*(Prescribed for the Oxford Local, London Matriculation, and College of Preceptors Examinations, 1900.)*

"Mr. Willson has certainly succeeded in giving boys all the information and the help they could possibly desire for translating Cæsar, and we may say that a thorough acquaintance with the contents of this volume would be a considerable step towards a knowledge not only of Latin, but of Roman history and antiquities in general. The notes are copious and accurate; while an appendix of proper names, with historical and geographical notes, is a good feature."  
*—Journal of Education.*

"The grammatical notes, which in the early part are intentionally numerous, are clear and often suggestive. The edition is evidently the work of a practical schoolmaster."  
*—Educational Times.*

"A very attractively edited volume, with some quite successful pictures and good notes which reach a really high level of merit."  
*—Guardian.*

"We wonder how it can be done at the price."  
*—Public School Magazine.*

**Virgil—Georgics. Book IV.** By J. SARGEANT, M.A., Assistant-Master at Westminster. 1s. 6d.

*(Prescribed for the Cambridge Higher Local Examinations, 1900, 1901.)*

"The editing of the specimen before us is thoroughly competent; the notes are brief and interesting, and the introduction and the appendices are of more than average merit. The price of the book is remarkably low."  
*—Educational Times.*

"The book is the best we have seen of the new type of school-book. If Messrs. Blackwood keep up to this standard, their series will stand high."  
*—Literature.*

"There is a pleasing freshness about this volume."  
*—Athenaeum.*

READY IMMEDIATELY.

**Cicero—In Catilinam. Books I.—IV.** By H. W. AUDEN, M.A., Assistant-Master at Fettes College.

**Ovid.—Metamorphoses (Selections).** By J. H. VINCE, M.A., Assistant-Master at Bradford.

**Demosthenes.—Olynthiacs I.—III.** By H. SHARPLEY, M.A., formerly Assistant-Master at Marlborough.

**Xenophon.—Anabasis. Books I., II.** By A. JAGGER, B.A., Hymer's College, Hull.

**Cæsar.—Gallic War. Books I.—III.** By J. M. HARDWICH, M.A., Assistant-Master at Rugby.

*Other Volumes in preparation.*

## BLACKWOODS' ENGLISH CLASSICS.

With Frontispieces. In fcap. 8vo volumes, cloth.

General Editor—J. H. LOBBAN, M.A., Editor of "English Essays," formerly Examiner in English in the University of Aberdeen.

*The following Volumes have been arranged for:—*

**Milton.—Paradise Lost. Books I.—IV.** By J. LOGIE ROBERTSON, M.A., First English Master, Edinburgh Ladies' College. [*Immediately.*]

**Cowper.—The Task, and Minor Poems.** By ELIZABETH LEE, Author of "A School History of English Literature." [*Immediately.*]

**Johnson, Lives of Milton and Addison.** By Prof. J. W. DUFF, M.A., the Durham College of Science, Newcastle-upon-Tyne. [*Immediately.*]

**Macaulay.—Essay on Johnson.** By D. NICHOL SMITH, M.A., Editor of "King Henry VIII." (Warwick Shakespeare). [*Immediately.*]

**Goldsmith.—Traveller, Deserted Village, and other Poems.** By J. H. LOBBAN, M.A., formerly Assistant-Professor and Examiner in English, University of Aberdeen. [*Immediately.*]

**Milton.—Lycidas, L'Allegro, Il Penseroso, Comus, Arcades.** By C. J. BATTERSBY, M.A., Grammar School, Bradford.

**Scott.—Lady of the Lake.** By W. E. W. COLLINS, M.A.

*Other Volumes to follow.*

WILLIAM BLACKWOOD & SONS, Edinburgh and London.

# CAMBRIDGE UNIVERSITY PRESS.

READY MAY 1ST. — NEW WORK BY SIR JOSHUA FITCH. Crown 8vo, 5s.

**EDUCATIONAL AIMS AND METHODS.** Lectures and Addresses by Sir JOSHUA FITCH, M.A., LL.D., late Her Majesty's Inspector of Training Colleges, and Author of "Lectures on Teaching," "The Arnolds and their Influence on English Education."

The forthcoming volume consists of lectures and addresses given in Cambridge, or before the Teachers' Guild and other bodies of teachers in England and in America. Its general aim is to direct attention to various aspects of educational theory and of practical work; and it includes several monographs on the lives of distinguished and representative teachers.

BY THE SAME AUTHOR.

**LECTURES ON TEACHING.** Delivered in the University of Cambridge in the Lent Term, 1880. Crown 8vo, New Edition, 5s.

NEARLY READY.—THIRD EDITION OF "OEDIPUS COLONEUS."

**SOPHOCLES.—THE PLAYS AND FRAGMENTS,** with Critical Notes, Commentary, and Translation in English Prose, by R. C. JEBB, Litt.D., M.P., Regius Professor of Greek in the University of Cambridge. Demy 8vo.

Part II. **OEDIPUS COLONEUS.** Third Edition. 12s. 6d. Nearly ready.

Part III. **ANTIGONE.** Third Edition. *In the press.*

Part VIII. **THE FRAGMENTS.** *In the press.*

*Classical Review.* "Of the 'Sophocles' as a whole we can only add our mite to the general verdict of scholars, who place it in the first rank of extant editions of the classics."

## CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

General Editor—W. H. WOODWARD, of Christ Church, Oxford; Principal of University (Day) Training College, Liverpool; and Lecturer on Education in Victoria University.

ADAPTED FOR USE OF CANDIDATES FOR CERTIFICATE EXAMINATIONS OF EDUCATION DEPARTMENT.

**THE EDUCATION OF THE YOUNG IN THE REPUBLIC OF PLATO.** Translated into English, with Notes and Introduction, by B. BOSANQUET, M.A., LL.D., Author of "A Companion to Plato's Republic." Crown 8vo, 2s. 6d.

**THE MAKING OF CHARACTER:** some Educational Aspects of Ethics. By JOHN MACCUNN, Balliol College, Oxford; Professor of Philosophy in University College, Liverpool. Crown 8vo, 2s. 6d.

*Literature.*—"An acute and thoughtful book."

*Leeds Mercury.*—"A volume which deserves to be not merely read, but studied by all practical educationalists."

*Scotsman.*—"It cannot but prove both helpful and stimulating to those who have to teach teachers, and to those pupil-teachers and candidates for certificates for whose use this able series has been prepared."

SPECIALLY SUITED FOR CANDIDATES FOR QUEEN'S SCHOLARSHIP EXAMINATIONS, DECEMBER, 1900, AND CERTIFICATE EXAMINATIONS, JULY, 1900.

**A SHORT HISTORY OF THE EXPANSION OF THE BRITISH EMPIRE, 1500-1870.** By W. H. WOODWARD, Christ Church, Oxford; now the Principal of the University (Day) Training College, Liverpool, and Lecturer on Education in Victoria University. With Seven Maps, crown 8vo, cloth, 4s.; cloth extra, gilt top, 5s.

*Athenaeum.*—"Thoroughly to be recommended."

*Manchester Guardian.*—"Mr. Woodward has produced a volume which has set a high standard for the series. . . . A workmanlike and scholarly piece of historical study."

*Educational Times.*—"Mr. Woodward tells the story *in usum scholarum* in an altogether admirable manner."

## COLLEGE OF PRECEPTORS' EXAMINATIONS, JULY AND DECEMBER, 1900.

### CAMBRIDGE MILTON FOR SCHOOLS.

*Guardian.*—"This edition will, we feel sure, long continue to be the standard school text of 'Paradise Lost.'"

**Paradise Lost, Books III. and IV.** Edited, with Introduction and Notes, by A. W. VERITY, M.A. 2s.

### PITT PRESS SERIES.

AUTHOR.	WORK.	EDITOR.	PRICE.
Macaulay	Days of Ancient Rome (with Ivory and The Armada)	J. H. Flather	1 6
	<i>School World.</i> —"In thorough keeping with the other volumes of this series, an evidence of patient labour, and no mean tribute to Macaulay himself. . . . The notes are brief and pointed, and two useful maps are appended. The introduction is brief, but exceedingly well done."		
Scott	Marmion	J. H. B. Masterman	2 6
	<i>Guardian.</i> —"Far and away the best school edition of the poem we have seen; and it will be difficult, probably impossible, to improve on it."		
Scott	Lay of the Last Minstrel	J. H. Flather	2 0
	<i>Guardian.</i> —"It is one of the very best edited school-texts ever placed before the public."		
Caesar	De Bello Gallico, Books IV.-V. (Subject, Book V.)	A. G. Peskett	1 6
"	De Bello Gallico, Book VI.	"	1 6
Cicero	De Senectute	J. S. Reid	3 6
Horace	Odes, Book III.	J. Gow	2 0
Livy	Book XXII.	M. S. Dimsdale	2 6

Lucian	Menippus and Timon	E. C. Mackie	3 6
Xenophon	Anabasis, Books III. and V.	A. Pretor	each 2 0

### THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

**As You Like It.** 1s. 6d. With Introduction, Notes, Glossary, and Index, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge.

*Guardian.*—"Mr. Verity, the editor, has provided material for all sorts of students. For the beginner we have the notes and a reprint of Charles Lamb's outline of the story. For older readers we have copious extracts from Lodge's 'Roslynde.' For the examinee, the etymologist, and the curious student, we have the glossary, the index of the important words and phrases, and the notes on metre and on the date and sources of the play. All of these aids evince patient research, accurate scholarship, and thoughtful judgment."

### CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

*School Guardian.*—"Exact and scholarly, and at the same time simple, text-books. The University Press are to be congratulated upon having secured as editors such eminent scholars; their names are a guarantee of their work. These text-books will find their way into numberless preparatory schools and lower forms of public schools; they deal so thoroughly and clearly with the subject in each case that nothing better could be desired by master or pupil. Among others, there is this immense advantage: each volume is its own note-book and dictionary: the student, however elementary his knowledge, needs only the book in hand and a simple grammar."

The following editions have COMPLETE VOCABULARIES.

AUTHOR.	WORK.	EDITOR.	PRICE.
Caesar	De Bello Gallico, Books V. and VI.	E. S. Shuckburgh	each 1 6
Vergil	Aeneid, Books VI. and XII.	A. Sidgwick	" 1 6
Xenophon	Anabasis, Books III. and V.	G. M. Edwards	" 1 6

\*. Cambridge Editions of Caesar, Vergil, and Xenophon.—The attention of Schoolmasters is called to the fact that there are now two editions of some of the works of these authors in the Pitt Press Series and the Cambridge Series for Schools and Training Colleges. The Editions in the Cambridge Series for Schools and Training Colleges have Complete Vocabulary. If, in ordering, the Edition required is not specified, the Pitt Press Edition, without vocabulary, will be sent.

### PITT PRESS SERIES.—NEW VOLUMES.

**Cicero.—Pro Lege Manilia.** Edited, with Introduction and Notes, by J. C. NICOL, M.A., Trinity Hall, Master of Portsmouth Grammar School. 1s. 6d.  
*Glasgow Herald.*—"A very scholarly piece of work."  
*School World.*—"This edition is to be recommended to those who want their forms to exercise common sense and learn something of the genius of the Latin language, as well as to 'get up' the translation and allusions."

**Hauff.—Der Scheik von Alessandria und seine Sklaven.** Edited, with Notes and Vocabulary, by W. RIPPMMANN, M.A., Professor of German at Queen's College, London. 2s. 6d.  
*Educational Times.*—"This is a welcome addition to the elementary reading books available for schools, the 'Karavane' having become almost too buckneyed, and Mr. Rippmann's name is sufficient guarantee for good editing."

The Educational Times.

Higher Elementary Schools.

THE Board of Education is at work, and, so far as elementary education is concerned, it is beginning to show its hand. Such of us as are interested mainly in higher and secondary education must be content to wait a little longer, until the Departmental Committee, appointed last July, has had time to make its final report. On November 2 the Duke of Devonshire stated officially that "the Committee will have regard, in their recommendations, to the provisions of the Board of Education Act relating to secondary schools, and the undertaking of the Government to establish a third branch of the Education Office to deal therewith." On February 12, in answer to a question in the Commons, Sir John Gorst said: "The Committee have made already two interim reports. The final report is shortly expected." On March 8 Sir John Gorst said, in answer to Mr. McKenna: "The arrangements for establishing a third branch of the Board of Education are still under consideration." Now it is May; Parliament has reassembled after the Easter recess, but, at the moment of writing, we are not aware that the third branch is established, or that the Consultative Committee is appointed. The first members of this Committee, our readers will remember, are to be "appointed by Order in Council," without the advice of the Universities and other educational bodies, and "subsequent members in such manner as the Order in Council may direct." That is how we stand at present—in an attitude of indecision and expectancy. The President and Vice-President of the Board must not think us unduly inquisitive. The Act of 1899 is not remotely connected with secondary education. It is the outcome of secondary zeal, of secondary Conferences, of a secondary Royal Commission. We have no desire for raw haste; but secondary teachers will doubtless be glad when the work of registration is put in hand, and when the third branch is organized under an Assistant-Secretary who understands the recent developments and present needs of secondary education.

Meanwhile, as we have said, the Board has made a beginning of its new work. The Committee of Council never saw fit to regularize the position of the higher-grade schools, which were in their origin an irregular encroachment by the elementary School Board on the secondary domain. The Board of Education,

with its ampler powers, has decided that such schools shall be conducted by the Board (with separate registers and separate accounts) for pupils up to the close of the year in which they attain the age of fifteen, and with State grants for each pupil on the following scale:—

	Fee Grant.	Principal Grant.		Practical Work Grant.	
		Higher Scale.	Lower Scale.	Higher Scale.	Lower Scale.
First year.....	10s.	27s.	25s.	8s.	6s.
Second year...	10s.	35s.	33s.	12s.	10s.
Third year ...	10s.	47s.	40s.	18s.	15s.
Fourth year...	10s.	65s.	55s.	25s.	18s.

That is to say, when the Inspector is satisfied, and when provision is made for "practical work," the State will find fees varying from £2. 5s. to £5. There is nothing in the Minute from which we are quoting to show who is to build and maintain the edifice of the Higher Elementary schools, but we presume that in this respect the precedent set in the higher-grade schools will be followed—that is to say, that the premises will be provided out of the rates.

This, of course, is secondary education, supplied by the State up to an outside age limit of sixteen, in competition with private enterprise and endowment. But there are two saving clauses:—(1) The schools are to be exclusively continuation schools, for pupils who have been at least two years in an ordinary public elementary school (Board or Voluntary); and (2) "The school must be shown, to the satisfaction of the Board, to be necessary in the locality." The latter of these guarantees is vague, inasmuch as "the satisfaction of the Board" is indeterminate. The former is an absolute guarantee as far as it goes, but it is quite possible that some of the pupils in the new schools (which may be multiplied indefinitely) will be diverted from endowed and private schools. We have, however, always anticipated that continuous education on Board-school lines would be systematized under the new organization. The State was bound to make provision for it, and though a large number of the pupils in the Higher Elementary schools will be under the old elementary age-limit, and all of them will be transferred from the ordinary elementary schools, we need not

be so doctrinaire as to complain that this first step of the Board of Education perpetuates the overlapping of elementary and secondary provisions.

*Frances Mary Buss.*

In the history of the recent changes in girls' education, once more brought to public notice by the jubilee of the North London Collegiate School, whose existence exactly coincides with the last half-century, there are few elements more interesting than the personality of Miss Buss. She marks a distinct change in the type of headmistress. Instead of aiming at appearances, accomplishments, and mere show of any kind in her pupils, she substituted solid acquirements, common sense, and modest demeanour. "Be visible through and through" she would say to them, and certainly she lived up to the maxim herself. After insisting on being trained for her work before beginning it, she set herself a clear task, namely, to plan a scheme of religious and liberal education, and to bring it within reach of the great middle class. Her first prospectus boldly appealed to "professional gentlemen of limited means, clerks in public and private offices, and persons engaged in trade and other pursuits." This dominant note has been maintained throughout the fifty years of the life of the school, and, even looking at the many University honours gained by the pupils, we consider that none of them so truly redound to the glory of the institution as its absolute lack of that snobbishness which has become such a blot on our boys' public schools. Its *esprit de corps* even has been free from all exclusiveness, so that last month's jubilee seemed more like that of the whole field of education than that of a single school, started as a private venture in a London suburb, amid all the prejudices of the early Victorian period.

With regard to Miss Buss's general management we have only met with one adverse criticism—as to her tendency to over-organization. Notoriously bad as were the results of the old-fashioned ladies' schools, with their innocence of time-tables and system generally, there is a distinct, if subtle, danger in the opposite extreme. Under Miss Buss's *régime* the girls were forced willy-nilly to be methodical and business-like. Rules punctuated every step they took, time was mapped out so that not a moment was lost—a very little margin was left for individual judgment and the wise exercise of liberty. Was an action right or wrong? "Multiply the results" was the touchstone Miss Buss would apply. Thus there was a rule that no girl must put her hand on the banister, for, if some four hundred did so, the banister would be soiled. And rules of this type were innumerable. Logically there should have been a prohibition of sneezing, for, if the whole school had sneezed at once, the result might have been dire. In girls of a weak character this excess of rules dealing with trifles has a tendency to make them weaker still, by checking the power of initiative, while in the case of the nervous and over-conscientious more serious results are possible. And we are disposed to conclude that the typical "North Londoner," with her prompt and orderly habits, is what she is in virtue of the general tone of the school, and in spite of the excessive amount of regulations laid down for her well-being.

The school authorities have printed a "Jubilee Magazine" with illustrations and articles describing the history of the school. A paper by Mrs. Bryant on its development from the earliest days, with an account of the achievements of

pupils in examinations, deserves preservation in some more permanent form. It shows how a consistent ideal of intermediate education has been maintained throughout the school's career. More might easily have been done to make the number of value as a commemorative record. An analysis of the school registers as to numbers, ages of entrance, average length of a pupil's school life, social origin, whether any changes were observable in later years as due to the Elementary Education Act of 1870, with some account of the actual organization of the school for teaching and games, might well have been included. Instead, we have a smart, pleasantly written analysis of the characteristics of the "new girl," and a learned disquisition on the doings of the "old girl" from the days of Clytemnestra to those of Miss Frances Power Cobbe. We may add that some of the "Memorabilia" or personal anecdotes of Miss Buss she herself would have cut out with a ruthless hand. The following, which does not appear, is very characteristic:—"I was once in church," she told the present writer, "with a pewful of girls, and saw symptoms of a fainting fit in one of them; I leant across and whispered in her ear: 'You dare faint!' This completely restored her." Those who knew Miss Buss will readily believe that it did.

## NOTES.

FOLLOWING close on the reorganization of the Education Department and the constitution of the Board of Education, it was announced that Mr. W. Tucker, C.B., a Principal Assistant-Secretary to the Board of Education, had retired from the service on reaching the age of sixty-five. Mr. J. White (Assistant-Secretary) has been promoted to be Principal Assistant-Secretary; Mr. F. R. Fowke (assistant-director for science); Mr. H. W. Hoare, Mr. W. I. Ritchie, and Mr. H. M. Lindsell (senior examiners) to be Assistant-Secretaries. It will be remembered that Mr. Tucker was a member of the Reorganization Committee, and that he was appointed as the first Principal Assistant-Secretary for Elementary Education at Whitehall under the new Board. Sir George Kekewich has notified that communications relating to Elementary Education should be addressed to "The Secretary, Board of Education, Whitehall," and those relating to Science, Art, and Technical Education to "The Secretary, Board of Education, South Kensington." How and where are we to address communications relating to Secondary Education—when it is neither science nor art, nor technical instruction?

PRESENTATION DAY at London University falls on Wednesday, May 9, when it is hoped that the Prince of Wales will be able to preside. The ceremony will be held at the new home of the University, at South Kensington, to which most of the effects of the University have now been removed. An effort is being made to retain the buildings at Burlington Gardens for the use of the University; though it is feared that the Treasury has already destined these buildings to a different purpose. The old lecture-theatre in Burlington Gardens could doubtless be put to very good use by the London Senate, which within the next few years will widely extend the sphere of its operations. More room, as we have always said, must soon be found for the metropolitan University, but for this and other

purposes we ought now to look to the munificence of private donors.

A good example of the complete misconception which exists on some School Boards as to their proper sphere of work is afforded by the letter of the Chairman of the Cardiff School Board in the *Times* of April 24. He there complains that, by the limitations of the new Minute issued by the Board of Education, it will be impossible to train their pupils in future for the Trinity College, Cambridge, scholarships. He is proud of the fact that last year one of their pupils secured a £100 scholarship at Trinity. This only shows how misguided much of the educational enthusiasm of the country is. Without pressing the technical objection that it is not within either the letter or the spirit of the Elementary Education Acts that the rates should be used for such lines of education, it is self-evident that the work can only be done at the expense of the real work of "higher elementary" schools. This should be technical and commercial, preparatory to the technical school proper, while it is the function of the secondary school to prepare for the Universities.

THE discussion on the subject of "Our Educational Organization" at the conference of the National Union of Teachers at York indicated a general unanimity with regard to the formation of the future Local Educational Authorities. The conference suggested that the Authorities should be elected on the parochial register, for the same areas as the County Councils, and should be responsible for primary, secondary, technical, and commercial schools within such areas. The scheme, doubtless, has the merit of simplicity, and in educated constituencies it is probable that fit representatives would be chosen. Such Authorities, however, would have a large spending power, and it would be difficult to prevent the election of members being affected by political and mere local considerations. No special aptitude for the work to be done could be assured, and the duties might just as well be performed by the existing County Councils. The ideal Authority is, however, still undiscovered. When are we to have the Government's promised Bill?

A LITTLE to our surprise, the grievances of the assistant-masters of our secondary schools found voice in a recent Socialist conference. The circumstance shows a growing appreciation of the importance to the State of the well-being of the scholastic profession. The inadequate salaries of assistant-masters in secondary schools was fully admitted, and complaint was made of the high salaries paid to headmasters in comparison with those paid to their assistants. What is most required is a levelling up; for, except in, perhaps, half-a-dozen schools, headmasters are by no means overpaid. It is certainly true that headmasters in both public and private schools are often overworked; but, as overwork involves a violation of the eight hours' day gospel, they must not expect any Socialist sympathy.

It would appear, from the Archbishop of Canterbury's speech at the meeting in support of the National Society held at Canterbury, that the Society contemplates an extension of its activity into the area of secondary education. Dr. Temple

found a tendency in certain quarters to exclude religion as much as possible from such education owing to the inextricable network of conflicting interests involved. To avoid such a calamity he would give parents everywhere the right of choosing for themselves the kind of religious instruction to be given to their children. This is somewhat vague, and, taken literally, sounds an impossible solution if religious instruction is to form part of the school curriculum. There would, we suspect, be differences even among Church people as to the scope and character of such instruction. The common-sense view of the matter is one we have already expressed in these columns—that the Board of Education, in dealing with secondary schools, should pursue its course as if no religious question existed. Thus, it will not require the watchful attention of the National Society now advised by the Archbishop. When the religious bodies are agreed upon a scheme, it will be a simple matter to pass it into law.

THE Franco-English Guild, which enjoys the patronage of the French Minister of Public Instruction, the English Education Department, and the American, as well as the English, Ambassador, bids fair to enlarge its activities this notable Exhibition year. The history of the Guild has, indeed, been one of steady growth; and it has done much to give practical expression to the *entente cordiale* that has so long—may we not say always?—marked our relations with our neighbours in matters educational. And this is not surprising seeing that the classes, the reunions, and the monthly meetings organized by the Committee afford opportunity for much pleasant intercourse. Occasional lectures of more than usual interest are also given, and some well known English names appear on the lists. Thus, some months ago, Mrs. Henry Sidgwick (Principal of Newnham College) addressed the members on "The Place of University Education in the Life of Englishwomen"; some time after Mrs. Wynford Philipps (foundress of the Women's Institute) dealt with "Women's Work in London." Lately, too, other characteristic sides of club-life (the reading-room, the tea-room, the library, &c.), have been developed—these, it may be noted, are far less familiar to the French than to the English "working woman"—and the present *local* is situated in the Rue de la Sorbonne, the very centre of academic life and interests. The Guild has now passed into its tenth year of existence, and it numbers with the American contingent over three hundred members, of whom more than two-thirds are French. A Franco-Polish section has just been affiliated at the request of some of the Polish residents in Paris.

AMONGST the many difficult problems which confront those who administer our English Poor Law there is probably none more serious than that of dealing with the children who, through no fault of their own, are brought within the circle of its operation. In the past, evil has too often resulted from early contact with the workhouse, but there are many signs which point to better things to come. Most persons are agreed that to take the children out of the workhouse atmosphere is the first and most imperative duty of those responsible—to set them in a new place, and give them a chance of developing healthily and normally. At Styal, in Cheshire, there is a happy and well

managed colony of such children living in separate homes under the care of foster-mothers. Nobody who sees the children at work or play can doubt the wisdom of the Guardians of the Chorlton Union, who are responsible for the Styal Colony. In Whitechapel a somewhat different experiment is about to be tried. Semi-detached cottages are to be the homes of the children here, and the number of children under the care of one foster-mother is not to exceed ten. This is a smaller number than the Styal mothers look after, but it is quite large enough. At Whitechapel also the boys and girls will be mixed in the different homes as they are under normal conditions, and this is as it should be, though it is unusual in such institutions. The children are to go to a neighbouring elementary school, and there will be no distinctive dress or badge to mark them off from their schoolfellows. A lady superintendent, who is to be a trained nurse, will have the general control and government of the children, and to her the various foster-mothers will be able to turn in any doubt or difficulty which may meet them in their work. How *Oliver Twist* would have stared could he have been transported by the time-machine to Whitechapel, and the foster-mother in the semi-detached cottage; and how Charles Dickens would have rejoiced to see the walls rising for the buildings which are intended to be real *homes* for these London children!

The Society of Experimental Fish Culture is getting to work at the Crystal Palace, which is to be its headquarters. Its museum, speaking in a wide sense, will include specimens of living fish and the creatures on which they feed. The general public will soon have an opportunity of adding to their knowledge, and the proposed system of detailed labels should help them considerably. It would be better if we bore in mind more than we do the definition of a great authority, who said that "a museum is a collection of labels illustrated by suitable specimens." The full value of our public natural history collections has never been properly recognized from an educational point of view. Professor Flower did much at the British Museum in Cromwell Road, and his teaching is making itself felt in those institutions which have left the days of rare-shows behind. Educational series of plants and animals are considered a necessary adjunct to the collections from the country which it is the aim of local museums to get together. In individual cases the whole museum became educational, and natural history made one subject among a number. Many existing collections might be made more interesting and capable of imparting knowledge in a direct way by the expenditure of a little trouble and money. The Buckland Museum of Economic Fish Culture has long been a standing example; but perhaps no better instance could be taken than the Zoological Society's Gardens in Regent's Park. Here the labels tell nothing further than the name, sex, locality, and donor of the animal. The visitor learns nothing further unless he obtains the printed guide, which is totally inadequate, and he must get some naturalist of his acquaintance to go with him if he really wants to know the interesting points about the creatures before him, which appeal all the more strongly to him, being, as they are, alive. Some lecturers on natural history have used the Society's collection to supplement museum work, but the task of doing so is by no means easy under the existing conditions.

## SUMMARY.

### THE MONTH.

On April 3 a service was held in St. Paul's Cathedral in commemoration of the founder and benefactors of the Frances Mary Buss Schools. While the opening hymn—"All people that on earth do dwell"—was being sung, a procession, headed by more than a hundred lady graduates, passed up the centre aisle. Representatives of schools and educational associations followed, and behind them representatives of colleges and University authorities, administrative City Companies, school authorities, and, last of all, the Bishop of London and the Archbishop of Canterbury. The form of service included a commemoration of the founder and benefactors, which was said by the Bishop of London, the congregation standing. This was succeeded by two thanksgivings, one for "the foundation and progress of the Frances Mary Buss Schools," and the other "for all benefits to the education of women during the half century."

Taking as his text the words, "Who can find a virtuous woman? for her price is far above rubies," the Archbishop remarked that one of the first things said of the woman spoken of in the chapter from which these words were selected was that she could be trusted because she had been educated to be a woman in reality. If women were to be educated as they should be, there was no faculty which they possessed, no impulse, no affection, no quickness of wit, no delicacy of conscience, which did not demand to be cultivated to the highest point. She should be developed into a real woman, just as a man should be developed into a real man. The utilitarian view of education must not be pushed too far. A woman would render all the duties she owed to her place in God's system more efficiently if her whole mind were trained than she would otherwise do. In many ways their education must differ from that of men, but whatever power they had ought to be cultivated to the very utmost. How were they to determine what the education of women should be? The answer was that it must be determined by experience. Let women choose for themselves, pursue any study for which they had a natural desire, because, as a rule, it would be found that for that they had a natural aptitude. If left to themselves to study how and what they wished, it would be found more and more that the great principle on which women's education had to be guided would be visible to women themselves, and, without any restraint from men, they would follow that which suited the whole sex best and would become real women—the most blessed gift of God.

On April 5 a meeting of old pupils was held at the Clothworkers' Hall, kindly lent for the occasion by the Worshipful Company of Clothworkers. Mr. Cronin, Master of the Company, who presided, welcomed the gathering to the hall, and in a speech pointed out the paramount value of education as a training for life. Subsequent speakers, all of whom, in the course of personal reminiscences of the school, bore testimony to the great influence for good exercised by Miss Buss in the life and training of the scholars, and also to her constant efforts in regard to the education of women, included Miss Emily Davies, founder of Girton College, Cambridge, who spoke of the time when public examinations were first opened to women; Miss Woodward, Headmistress of Gloucester High School; Mr. Latham, Q.C., Chairman of the school and Past Master of the Clothworkers' Company, who described the way in which the Brewers' Company and the Clothworkers' Company came to assist the school; Miss Burstall, Headmistress of Manchester High School; and Mrs. Bryant, the present Headmistress of the school, who said that the co-operation in those jubilee celebrations of all the schools, colleges, and Universities, without exception, throughout the country was due to the feeling that honour was due to the schools as pioneers in the higher education of women. On the motion of Miss Clara Collett, seconded by Mrs. Septimus Buss, a vote of thanks was accorded to the chairman and the Clothworkers' Company.

The new Board of Education issued on April 6 a Minute—to quote its own words—"establishing higher elementary schools," commonly known as higher-grade schools. A public elementary school may be recognized by the Board as a higher elementary school under the following conditions:—The school must be organized to give a complete four years' course of instruction, approved by the Board; no child shall be admitted into a higher elementary school unless he has been under instruction at a public elementary school, other than a higher elementary school.

for at least two years, and has been certified by an inspector of the Board to be qualified to profit by the instruction offered in the higher elementary school. Attendances may not be recognized in a higher elementary school for any scholar who is upwards of fifteen years of age, and no scholar may remain in a higher elementary school beyond the close of the year in which he or she is fifteen years old. The school must be shown, to the satisfaction of the Board, to be necessary in the locality, and the premises must be recognized by the Board as suitable for the purposes of a higher elementary school. The grant varies from 25s. to 65s., with extra grants for practical work. It may be reduced at the rate of not more than 10s. per annum for every unit of annual average attendance above the number for which the school staff is recognized by the Board. No member of the teaching staff may undertake duties not connected with the school which may occupy any part whatever of the school hours. No scholar may attend a higher elementary school who is attending an evening school or class under the regulations of the Board.

THE annual meeting of the National Association for the Promotion of Technical and Secondary Education was held on April 6 at the offices of the Association, Queen Anne's Gate. Sir W. Hart Dyke, M.P., presided, and there were present, among others, Sir F. S. Powell, M.P., Mr. H. Hobhouse, M.P., Sir C. Kay-Shuttleworth, M.P., Sir H. Roscoe (Hon. Secretary), Mr. W. Bousfield, and Sir P. Magnus. The Chairman regretted the absence of the President of the Association, the Duke of Devonshire, who had found it impossible to attend. With regard to technical and secondary education, and especially technical education, he said that the advance had been steady during the past ten years; and in no part of the country could it be said that there was a retrograde movement. The report of the Association upon the question was one of the best documents of the kind which he had ever perused.

THE Government some time ago set about obtaining particulars as to the provision made for the University teaching of Roman Catholics—first in foreign countries and again in the British Colonies. The inquiry was suggested by the demand of Irish Roman Catholics for a State-aided University. It appears from the printed returns that there is no direct precedent in Protestant countries for an endowed Roman Catholic University. The Prussian Universities are mainly supported by the State, which has assumed control over all the medieval foundations, and has deprived them of every vestige of ecclesiastical government. Their general character in regard to secular and religious education is in many respects similar to that of the older English Universities, except that the State, in its impartiality provides for Roman Catholic faculties of theology, conditionally on their acceptance of State control. The consequence is that friction exists between the Minister of Education and the Roman ecclesiastics, who assert their authority over the faculties, as at Breslau and Bonn, whilst they do all in their power to promote independent colleges and academies, both in and out of Germany, under the control of their Church. They patronize in this way a number of Free Catholic Universities in Belgium, France, and Italy. It has been argued that "this more or less compulsory education of German Catholic students, theological or otherwise, outside of Germany, is a source of weakness to the State, which might be avoided if the Roman Church were allowed to control one or more State-aided Universities within the Empire."

In Switzerland the general rule is one of undenominational equality. At Fribourg there is a faculty of Roman Catholic theology, which was for a time much resorted to by German Catholics. Fribourg is a State University, supported and controlled by the Federal Government, and perhaps it comes nearest of all Universities in Europe to the type of a Roman Catholic University provided under a secular and undenominational system. Under a concordat with the Federal Government the Holy See has absolute control over the theological faculty. Fribourg is at this moment subject to something like a boycott on the part of the German New Catholics; and it need hardly be said that the German Government in no way recognizes the foreign Universities to which German Catholic students resort. In the United States there is a large number of Roman Catholic Universities and University colleges. These are for the most part under the control of the Roman episcopate or con-

gregations; but they are incorporated under the laws of the various States and territories, so as to secure recognition for the degrees which they confer. There are as many as sixty-one institutions of this kind in the United States, out of a total of 484; but, in common with the colleges of other denominations, they are debarred from public endowments, whether federal or municipal.

ROMAN CATHOLICS clearly fare better within the Empire than in foreign countries. In the Australian Colonies and at the Cape, higher education is open to all without distinction. In Malta 99 per cent. of the people are Roman Catholics. "The instruction imparted in the University and in all Government educational institutions in this colony is based on Roman Catholic principles." The Government grant for this Roman Catholic University, with its *lycée*, amounted last year to £4,245. 17s. 4d. "The wishes of his Grace the Archbishop of Rhodes, Bishop of Malta, are met to the extent that changes contemplated in the curriculum of the Faculty of Theology are submitted to him for approval before their adoption; and the professors occupying chairs in that faculty, as well as the examiners, are appointed by the Governor of Malta, after communicating with his Grace." The conditions in Malta are governed, no doubt, by the overwhelming preponderance of Roman Catholics in the population; still, it has been pointed out that we have the British Government paying public money (over and above the amount of the original endowments of the Jesuits) for the direct propagation of the Roman creed.

In Canada the Roman Catholics number about two millions out of more than five. In Quebec alone they were at the last census 1,000,000 out of a total of 1,400,000—that is, five-sevenths, as compared with about three-quarters in Ireland. St. Boniface College, Winnipeg, is affiliated to and shares in the State endowment (and only) of the University of Manitoba. St. Francis Xavier's College and St. Anne's, in Nova Scotia, are both Roman Catholic Universities. St. Anne's has a small grant from the local Government. Laval University, which has buildings both at Quebec and at Montreal, was founded in 1852 by the Seminary at Quebec, receiving a Charter from the Queen in the same year. "In 1876 Pope Pius IX. recognized it by a Bull. Under the Royal Charter the Roman Catholic Archbishop of Quebec for the time being is named as Visitor, and the Superior of the Seminary as Rector. Under the Pope's Bull, the Cardinal-Prefect of the Propaganda is named as Patron. Here, again, the Roman Catholics rely on their own efforts. The State sanctions the University, but does not endow it, and the consequence is that the professors and lecturers teach for a bare subsistence. On the other hand, the Montreal Branch University (Succursale), an offspring from the University at Quebec, receives an annual grant of twenty thousand dollars from the Provincial Legislature—a direct State endowment of Roman Catholic education within the British Empire."

THE National Union of Teachers opened its Easter Conference at York on April 16. Mr. Marshall Jackman, President for the year, confined his address to the subject of security of tenure for teachers, which, as he said, has more importance than ever, in view of the new superannuation scheme. After dwelling on the injustice of leaving teachers without appeal in case of dismissal, he gave some useful information as to the guarantee of security in other countries.

In Belgium the teacher could appeal against his dismissal to the equivalent of our Education Department, and even to the King himself. In Sweden he could appeal to the King's Supreme Court. In France there was a careful and elaborate system of appeal to prevent the capricious dismissal of teachers, the final Court of Appeal being the Conseil Supérieur de l'Instruction Publique. In Austria and Holland the final appeal was to the Minister of Education. Compared with England, Hungary presented, perhaps, the most interesting study from the tenure point of view. In Switzerland there was no appeal, but the teachers were appointed in most cantons for a certain number of years by the parents of the scholars. Unless the teacher broke his contract, he cannot be dismissed. A special Court of Appeal existed in Wurtemberg. In Prussia the public schools were all denominational. The teacher was appointed by the school committee, and must be of the same religious denomination as that with which the school was connected. His salary was paid by the committee, but a subsidy, as in this country, was received from the State. As in this country also, the State pensions the teacher. When once appointed, he could not be dismissed, unless he changed his religion, when he might not only be

dismissed, but, with his dismissal, came the loss of his pension. He had not seen any return which gave the number of cases of dismissal in Prussia. The teacher was given the right of appeal against dismissal in Queensland to the Governor in Council; in South Australia to the Minister of Public Instruction; in New Zealand to a special Court of Appeal; and in Tasmania the teacher could only be removed by the Minister, with the consent of the Local Boards of Advice. In Quebec and Manitoba there was an appeal to the Courts of Law in case of unjust dismissal.

ON the concluding day the Conference passed the following amongst other resolutions:—

1. That this Conference hereby gives a hearty welcome to the important reform instituted in the Day School Code for 1900, whereby (a) detachment of the instruction from the monetary considerations which were almost inseparable from the old system of cumulative grants; (b) variety and elasticity in school work, and freedom to adopt curricula suited to the circumstances and capabilities of the various schools, with the consequent opportunities for the brightening of children's lives; and (c) the manifestation of greater intelligence in teaching and learning are at length secured. In the opinion of Conference, this reform continues a series of other changes in the right direction, instituted during the last ten years; and Conference calls upon members of the Union to demonstrate, by increased educational effort, the loyalty and gratitude with which they receive the New Code.

2. At the same time Conference strongly deprecates the principle of initiating financial improvements in the conditions of some schools, wholly or in part, at the expense of others.

3. In the opinion of this Conference, the official recognition of higher elementary education which is given by the Minute of the Board of Education, dated April 6, 1900, marks an important stage in the progress of popular education, and deserves the hearty welcome of all concerned. Conference, however, records its emphatic opinion that due provision should be made for similar education by means of suitable grants to higher classes in public elementary schools where such classes are established, with the consent of the Board of Education. Conference is also of opinion:—(a) That the article in the Minute which states that no child may remain in a higher elementary school beyond the close of the year in which he or she is fifteen years old should be withdrawn; (b) and that the Minute should permit of children, upon admission, taking that stage of instruction for which they are most suited.

The second of these resolutions evidently stultifies the first.

THE Clothworkers' Company have just made the first award of an annual free studentship established by them a short time ago at the Datchelor Training College. The studentship entitles its holder to a year's residence at Datchelor House, and to a year's training in the College, together with preparation for the examinations of the Cambridge Teachers' Training Syndicate, or for the Teaching Diploma of the London University. It has been awarded to Miss Emily Humphreys, B.A. Lond., who was for a time a student at Holloway College.

#### UNIVERSITIES.

(From our Correspondents.)

A MEETING of the Court of the University of Wales was held at Wrexham on April 26, under the presidency of the Senior Deputy Chancellor, Dr. Isambard Owen. In the absence of the Treasurer of the University, Sir James Hills-Johnes, V.C., who has gone to South Africa, Mr. Cadwaldr Davies, Junior Counsel to the University, has been Acting-Treasurer. The members of the Court were entertained to luncheon by the Mayor of Wrexham (Councillor Thomas Jones). The Central Welsh Board for Intermediate Education held a meeting on April 27, at Carnarvon. Among the questions under consideration was that of holding the annual examination of the schools at Easter instead of in July, as at present.

The Guild of Graduates of the University of Wales met this year at Cardiff. The reports of the Literary and Welsh Dialect Sections of the Guild were adopted. At an open meeting of the Guild the Warden (Prof. J. E. Lloyd, M.A.) delivered his presidential address, and a paper on "University Settlements" was read by Mr. J. G. Davies, M.A., Headmaster of the County School, Neath. A society, consisting mainly of professors, lecturers, and past students of the Welsh University Colleges, will probably be formed to consider the possibility of doing work in the large towns of Glamorganshire and Monmouthshire similar to that done by University Settlements elsewhere. Profs. Burrows

and Chapman, of the University College, Cardiff, are among the leading promoters of the movement.

A considerable sum of money has been recently bequeathed to the University of Wales by the late Mr. Pierce Davies, of Leeds, for the purpose of founding scholarships tenable at the University Colleges of Aberystwyth and Bangor.

Principal J. Viriamu Jones, F.R.S., who is still at Geneva, is said to be making steady progress towards complete recovery from his recent severe illness, and it is hoped that he will be able to resume his duties at the beginning of next session. In the meantime Prof. Thompson, M.A., Professor of Chemistry, has been appointed by the Council of the College as Acting-Principal. Principal Reichel, M.A., of Bangor, is also acting as Pro-Vice-Chancellor.

#### ON VOCABULARY MAKING.

THE composing of vocabularies is a profession that lacks a distinctive title; but, as the poets are divided by those who do not write poetry into major and minor, so you, reader, may, with convenience, speak of our vocabulary manufacture as the profession of Minor Lexicography. Dr. Johnson himself, a major lexicographer, declared that the making of dictionaries was dull work—yet is his "Dictionary" no dull reading; but with minor lexicography it is otherwise. The pursuit is exciting enough; but, as light literature, the finished work is not ranked high. The perfect minor lexicographer is not more frequently produced by Nature than is the major poet. London went near to yielding one in the late Dr. Hubert Holden; but we can point to errors even in his vocabularies. We believe, however, that there is one of these rare beings now living at Cambridge. But most minor lexicographers have the failings of men, and leave out words. Their friends always discover the omissions, and worry about them; but the minor lexicographer, if he be wise, is not greatly impressed by their grief.

Minor lexicography is not a very lucrative profession. Lord Macaulay writes that in the reign of Charles the Second its members wore threadbare coats; but nowadays it is possible for a good scholar, by unremitting industry, to earn quite fourpence in an hour. We have known one minor lexicographer who became a rich man by the following ingenious device. He had the presence of mind to drop the little earnings won in his profession into the drains of Buenos Ayres at a moment when they were at ditch-water level; and after the lapse of but a few weeks the shrewd fellow managed to float out on the top when they had risen prodigiously. But it has been said, with truth, that wealth lightly gained is seldom well spent. Our poor friend ran through almost all that his successful speculation had brought him in a pathetic attempt to invent a new kind of rhubarb; and on a day when he had but a few pounds remaining, and fancied that he had almost succeeded, he chanced to receive a catalogue from an eminent firm of horticultural practitioners—and, behold, he had been anticipated! We lost sight of him for some years after that dreadful misfortune, but at length lighted on him in Mayfair, dressed as a one-armed organ-grinder. He then said that he was doing fairly well, and had no intention of returning to his earlier profession.

Minor lexicography is an art to be won only by long practice and close observation. It is, therefore, of little use to set down a recipe for making a vocabulary, because, as Izaak Walton says of his own art of angling: "You then have my fiddle, but you have not my fiddlestick." Nevertheless, we will here declare the system which we, now risen, as we believe, to the very top of our profession, and about to be admitted by the good offices of a grateful reader into the gifts or almshouses at C—, have, through a long life passed in close study, brought at length well nigh to perfection. First, then, you will make sure that you have a pen that is fine at the points, but yet glides fluently, so that your writing may not be checked, and the words may fall quickly from your hand. You must be at the expense, too, of providing yourself with many sheets of large paper, which may be of any size between royal and double crown. You will require one column for every page of your author, and you may, with convenience, put four columns on every page. You will then write out all the words without any attempt to classify them; for you are to observe that classification, which some members of our profession practise, is not only a hindrance to dispatch, but is very apt to cause attacks of spleen and even frenzy. When all the words are thus written down in columns, you shall sort out all those whose initial is A, and then you shall arrange

with great care and circumspection according to their true alphabetical order, and write them out fair, with their meanings and all that your reader will need to know concerning them. Every word, as he finds his proper order of precedence, in the vocabulary, you shall cross off in the column. And thus you shall proceed through the whole gamut of the twenty-six letters until you come at length to *Zed* and the end of your columns. This method is by far the most expeditious yet discovered, and, though at first you will experience many checks and failures in the application of it, yet, if you do but persevere, it shall at length yield you the round sum of fourpence in the hour, as we have declared above.

There is little glory to be won in this profession of minor lexicography. Therefore, if you adopt it, good reader, you must follow it for the sake of gain, for, truth to tell, the bookseller that employs you will scarcely follow the example of Milton's stationer, and herald your works into the world as deathless and never-to-be-blasted laurels. Yet, if their life be short, there is the consolation that it will be passed amid a goodly company of orators, poets, generals, and philosophers, whose society they will be permitted to share, and whose books they will have the honour of interpreting. It is the habit of industrious scribes that have not made much of a figure in the world to publish, in their old age, those bulky Reminiscences, Memories, Memoirs, or what not, from which you are to learn, if you please, that the author was intimate with the great So-and-so, was a frequent guest at the dinner table of the famous What-d'ye-call-em, and was admitted into the *salon* and knew the secrets of Madame Thingumbob. It is not often possible to test the writer's veracity, and it is seldom possible to avoid a suspicion that he has magnified the part he bore in the transactions that he describes. To the gentleman who played the Cock in "Hamlet" there remained, in his old age, but the unsubstantial recollection of that one triumphant crow, for his name was not on the bill. But we have at hand, and shall bequeath to posterity, unimpeachable evidence that we were clothed in the same cloth as Virgil and Cicero—nay, as the elder Pliny himself, that prince of compilers. Here is, at least, an honour that none can wrest from you, none can dispute. For the rest, it is well to embrace the tenets of Epicurus, and, having the means to gain a competence, to trouble not about glory.

We will conclude this paper with an expression of hope that in days to come the black races may be admitted into the profession of minor lexicography. The tomahawk is now but rarely seen, and the assegai is fast disappearing before the beneficent progress of our arms. But the tamed savage, disgusted at the collapse of the ancestral business, has, in some parts of our Empire, not taken kindly to those forms of labour that we have hitherto offered him in its place. We minor lexicographers are not an exclusive race; and, when the time is ripe, there will doubtless be many members of the profession who will readily accept appointments as teachers and professors in schools founded for the training of our black fellow-subjects. They will then be able to employ their pupils in the work which, of course, will still be put into the hands of the professors in the first instance. The professors also will receive the fees from the booksellers, and, retaining the one-half, more or less, as their rightful commission, will pay over the residue to the coloured scribe. It may be anticipated that the endowment of such lectureships and professorships will greatly raise the status of the minor lexicographer, and will provide posts at once pleasant and lucrative for those who, like ourselves, have worn out their strength in the pursuit of this honourable calling.

### THE PRUSSIAN ACADEMY.

MISS MARY C. DAWES, who was present at the bicentenary festival of the Prussian Academy, to which we referred last month, sends us the following description:—

"Memorable indeed was this extraordinary concourse of learned and distinguished men, to whom their various robes and decorations gave a rarely picturesque setting of colour and form. Amongst the most conspicuous were the rich velvet rectorial robes, those of the University of Leipzig being still further embellished by a border of ermine; there were also the Paris "Immortels" in their green embroidered robes; whilst an element of pleasant variety was supplied by the various forms—triangular, square, and round—of the academic 'caps.'

"After the performance of a sixteenth-century sonata, by Giovanni Gabrielli, for six trombones, cornet, and violons, conducted by Dr. Joachim, Prof. Vahlen, the President, opened the meeting. The

assembly was thereupon addressed by the distinguished Berlin theologian Adolf Harnack. In an eloquent speech of an hour's duration, the renowned Church historian sketched in broad and clear outline the history of the Academy, dwelling more especially on the brilliant epoch under Frederic the Great, and on the present, and concluded with the following peroration:—"Science constitutes neither the sole nor the highest task of humanity. Those, however, to whom her interests are committed should devote themselves with their whole heart and their whole strength to her cause. However various the phases assumed by different scientific epochs, the fundamental task remains one and the same—to preserve a keen and lively appreciation of truth, and to convert the kosmos of forces, under which form this world is presented to us, into a kosmos of ideas. May it be the lot of our Academy, during this its third century, to continue to assist in furthering this work of humanity, and may powers of darkness keep at a distance, whilst the Light, which was in the beginning, illumines its way, and the Word, which was in the beginning, enlightens its spirit!" Jubilant applause greets the speaker, and the conspicuous figure of the great Roman historian Theodor Mommsen, whose silvery age is still buoyed up with the elasticity of youth, steps forward and shakes hands with the theologian.

"Then followed the reception of deputations in groups. The first of these included the Royal Societies of Göttingen, Leipzig, Halle, Munich, and Vienna; the foreign Academies—three from Paris, one from London, St. Petersburg, and Rome respectively; Trinity College Dublin, represented by Prof. Mahaffy; Helsingfors; Turin; the Società Reale of Naples, represented by Mommsen, and Christiania by Nansen. The last was greeted with vociferous applause, and much merriment was caused by his presenting to the President, instead of the congratulatory address, his *chapeau claque*! A second group embraced the twenty-two German Universities; as also the German Universities of Austria and Switzerland; while the Prussian Provincial Associations constituted a third. These groups were followed by representatives of the remaining Berlin academies and high schools, as well as of various art institutes, corporations, companies, and societies. Congratulatory telegrams were also received from the Grand Duchess of Baden and King Oscar of Sweden, who is a corresponding member of the Academy. After fitting words of warm thanks from the various secretaries, the proceedings were brought to a worthy close by the singing of Stadler's fine hymn, 'Grosser Gott, allmächtiger Gott.'

"The founder of the Academy was the Kurfürst Frederic III., whose keen appreciation led him thus to embody the conceptions of Leibnitz. Frederic the Great added to the lustre of the academic annals by his zealous participation in its work; whilst Frederic William III. and Emperor William I. showed their interest and favour as reformers. From the present Emperor the Academy receives a support worthy of the traditional patronage that the Prussian rulers have bestowed on science. One of the chief modern developments has been the founding, in autumn last, of the International Association, the idea of which is to be traced back, it appears, to the original scheme projected by Leibnitz, which is said to have had in view a union of all European Academies. Amongst the numerous decorations we may mention the awarding of the Order of the Red Eagle, First Class, to Dr. Theo. Mommsen, and the same of the Fourth Class to Dr. Ad. Harnack. Amongst those elected to honorary memberships is Prof. Max Müller, of Oxford; whilst in the list of corresponding members we find, for the branch of anatomy and physiology, Burdon Sanderson, of Oxford; for that of classical philology, Frederic Blass, of Halle, and Geo. Hatzidákis, of Athens; and for that of history, Fred. Kenyon, of London, and John P. Mahaffy, of Dublin."

## CORRESPONDENCE.

### PRACTICAL USE OF PHONETICS.

To the Editor of the Educational Times.

SIR,—Some people swear by phonetics; some only swear *at* phonetics. For a long time the too alluring promises of eager phoneticians acted as a deterrent to the wary. May I put forward a plea in favour of phonetics, not as a panacea—Figaro said more than a hundred years ago: "Il n'y a point de remède universel"—but as a help, a valuable help, to the teacher of French?

Whilst writing a French book for beginners, I was endeavouring to guide in their pronunciation the many teachers who teach French, as well as many other subjects, and who have not resided eight or ten years in France, and who therefore cannot be certain of their pronunciation. I looked in vain for symbols of any real value. Of course, English equivalents are ridiculous. *Boolon, mongseer*, &c., we are sick of. The symbols of the International Phonetic Association are wonderfully adapted to render French sounds, with all their shades. The *ə* (*e* upside down) is the half-pronounced *e* in *le, de, me*; the *ö*, or *ø*, is the *eu* long, as in *peu, creux*; the *œ* is the *eu* short, as in *peur, seul*;

j is the German j, as in *ja* (English *y*, as in *yes*); there is a short *a*—i.e. *a*; a long *a*—i.e. *ā*; a short *o*—i.e. *o* (half an *o*); and a long *o*—i.e. *ō*, &c. These symbols—of which very few are hard, and which are very quickly learnt—enable the hardest words to be easily transcribed. *Monsieur* is *məs̄jō*; *feuille* is *fəj*; *queue* is *kū*; &c.

Of course these symbols by themselves will give no one a correct pronunciation. But, whereas no foreigner who has not resided eight or ten years in France can read quite correctly a page of French without having an experienced French scholar at his elbow, once he has mastered, by the aid of a Frenchman, the proper value of the phonetic symbols on the list (a matter of half an hour's work), he can read by himself any page in phonetic transcript with a correct pronunciation, and perfect himself in his speech by reading aloud *correctly*.

The International Phonetic Association has published many books which, notwithstanding several serious defects, are most useful. I would strongly recommend to colleagues for their own use and for that of their pupils "L'Écriture Phonétique," by Paul Passy (Association Phonétique, Bourg-la-Reine, Seine, France).

On the value of learning and teaching the production of the sounds, I will venture upon no expression of opinion, having met but one practical and successful teacher who believed in it. But it is surely well worth the while of all French teachers who do not feel absolutely certain of their speech to learn the few symbols in the phonetic alphabet in order to make sure of a correct pronunciation. It is very quickly learnt, and the time and trouble expended are amply repaid. I may add that I have tried it with many pupils during the past half-year, with results as satisfactory to themselves as they are to me. The time saved is enormous. The transcript enables a whole class to get up correctly the pronunciation of two whole pages at home, the only time taken up in class being when the teacher reads and divides the words into groups.—Yours faithfully,

VICTOR SPIERS.  
King's College, London.

#### ELEMENTARY-CUM-SECONDARY SCHOOLS.

To the Editor of the Educational Times.

SIR,—If one should be in doubt as to the boundary-line separating a neighbour's land from one's own, experience has shown that it is best to hoe up the ground in broad daylight to the utmost limits suggested by one's own way of thinking on the matter. The Board of Education, at the very outset of its career, gives us a good example of such breezy courage. Hitherto, the higher elementary schools, which some School Boards had established, were, it was thought, recognized by the Education Department, *sub rosa* only, as experiments and stop-gaps. It was, indeed, assumed that the Elementary Education Act of 1870 did not authorize the expenditure of public money in establishing what were practically secondary schools. The new Board has, by a minute recently issued, boldly given official recognition to such schools. By what authority this is done we know not, for there is nothing in either the Elementary Education or the Board of Education Act to justify the departure.

If the power exists, there seems to be nothing to prevent any deficiencies in the supply of secondary education being made good through the instrumentality of School Boards. This is certainly not what the country contemplated; and the very point was raised a short while ago by the County Council, in reference to the action of the London School Board; but it has not been pressed to a decision.—Yours faithfully,

A. E. H.

#### PARIS INTERNATIONAL ASSEMBLY.

To the Editor of the Educational Times.

SIR,—The Paris International Assembly is receiving the cordial support of many well known men here and across the Channel, and generally throughout Europe and America. Its primary purpose is to make the Exhibition, and the Congresses (nearly 150 in number) in connexion with it, as useful as possible to those who will visit Paris this summer. The idea took shape at the meeting last year of the British Association and the Association Française. Its President is M. Léon Bourgeois, ex-Premier of France, and for England the Vice-Presidents are the Right Hon. James Bryce, M.P., and Sir Archibald Geikie, F.R.S. Already French, British, and American Committees of influential character are working well together. The plan of the Assembly is, first of all, to arouse a keen interest in the Exhibition and the Congresses; then to guide people to such of the Congresses and portions of the Exhibition as they may most wish to visit. To this end special assistance will be given to the different classes of visitors, and particularly to the more serious-minded. There will be courses of lectures on special and general subjects, rendezvous, information bureau, expert guidance, private hospitality, means of visiting the different educational institutions, and excursions to the many points of interest in the city and surroundings. All this is but a brief outline of the Assembly's programme, and any further information of it, or of the Congresses and Exhibition, will be gladly given.—Faithfully yours,

5 Henrietta Street, Covent Garden.

T. R. MARR,  
Assistant-Secretary.

## A FEW OF THE PUBLICATIONS OF MOFFATT & PAIGE, Ltd. ENGLISH CLASSICS.

Edited by THOMAS PAGE.

In these Editions, Notes are Classified and Arranged.

Other Works in preparation.

### THE PLAYS OF SHAKESPEARE.

CONTENTS:—Chief Events in the Life of Shakespeare—Shakespeare's Works—Introduction—Date and Early Editions—Source of the Plot—Sketch of the Plot—Sketches of the Principal Characters—Literary Notes—Notable Passages—Proverbial Expressions and Familiar Quotations—The Text—Miscellaneous Notes—Notes on the Language of the Play—Etymological Notes—Proper Names—Examples of Paraphrasing—Examples of Analysis of Sentences—Anachronisms and a few Typical Questions selected from various Examinations.

#### REVIEWS:—

*Saturday Review*.—"Mr. Page has edited 'English Classics' in a manner to command approval."

Sir HENRY IRVING.—"A most faithful and scholarly edition."

*Daily Telegraph*.—"Julius Caesar" "... is invaluable as an aid to the study of the play."

*South Africa*.—"What a handy 'book of the play' they form!"

*Student's Friend, Bombay*.—"Decidedly the very best for students, be they Indian or English."

*Athenæum*.—"Essentially books for students."

*Educational News*.—"It would be difficult to imagine anything more perfect than this edition of 'Macbeth.'"

## MAGMILLAN & CO.'S NEW EDUCATIONAL BOOKS.

**EIGHT AYSGARTEH SCHOOL SERMONS.** By C. H. BOUTFLOWER, Chaplain to the Bishop of Durham. Fcap. 8vo, 2s. 6d.

### ENGLISH.

#### MACMILLAN'S ENGLISH CLASSICS—New Volumes.

**FROM BLAKE TO ARNOLD.** Selections from English Poetry (1783-1853). With Introduction, Critical Essays, and Notes, by C. J. BRENNAN, M.A. Edited by J. P. PICKBURN, B.A., LL.B., and J. LE GAY BRERETON, B.A. Globe 8vo, 2s. 6d.

**DRYDEN.—THE HIND AND THE PANTHER.** With Introduction and Notes by W. H. WILLIAMS, M.A., formerly Scholar of Trinity College, Cambridge, Professor of Classics and English Literature in the University of Tasmania. Globe 8vo, 2s. 6d.

*Schoolmaster.*—"A skillfully written introduction of some dozen pages gives a clear and concise enunciation and criticism of the animal fable which the poem is in form. . . . The notes which follow the text are, as far as we have tested them, accurate and full."

### FRENCH.

#### Latest Additions to Stepmann's Elementary French Series.

**NORMAND.—L'ÉMERAUDE DES INCAS.** Par CHARLES NORMAND. Adapted and Edited by the late F. ASTON BINNS, M.A. Balliol College, Oxford. Globe 8vo, 2s.

**DAUDET.—LA TOUÉ DES MAURES.** Par ERNEST DAUDET. Adapted and Edited by A. H. WALL, M.A., Assistant-Master at Marlborough College. Globe 8vo, 2s.

WORD AND PHRASE BOOK. Sewed, 6d.

*Educational News.*—"Deserves the highest commendation."

**VERNE.—LE TOUR DU MONDE EN QUATRE-VINGTS JOURS.** Par JULES VERNE. Adapted and Edited by LOUIS A. BARBE, B.A., Headmaster of the Modern Language Department in the Glasgow Academy. Globe 8vo, 2s.

WORD AND PHRASE BOOK. Globe 8vo, sewed, 6d. KEY, 2s. 6d. net. *Academy.*—"An excellent and amusing class-book. . . . The notes are satisfactory, and so is the vocabulary."

### CLASSICS.

#### MACMILLAN'S CLASSICAL SERIES.—New Volumes.

**EURIPIDES.—THE ANDROMACHE.** With an Introduction and Notes by A. R. F. HYSLOP, M.A., Assistant-Master in Harrow School. Fcap. 8vo, 2s. 6d.

**GREEK MELIC POETS.** By HERBERT WEIR SMYTH, Ph.D. Göttingen, Professor of Greek at Bryn Mawr College, Pennsylvania. Fcap. 8vo, 7s. 6d.

**DEMOSTHENES.—ON THE PEACE, SECOND PHILIPPIC, ON THE CHERSONESUS, AND THIRD PHILIPPIC.** Edited, with Introduction and Critical and Explanatory Notes, by JOHN EDWIN SANDYS, Litt.D., Fellow and Tutor of St. John's College, and Public Orator in the University of Cambridge. Fcap. 8vo, 5s. *Literature.*—"The edition is thoroughly satisfactory."

### COMMERCE.

**HINTS ON THE CONDUCT OF BUSINESS, PUBLIC AND PRIVATE.** By Sir COURTENAY BOYLE, K.C.B., Secretary to the Board of Trade. Crown 8vo, 3s. 6d. *Westminster Gazette.*—"The work of such an authority is sure to be eagerly welcomed and widely read."

### PHYSIOLOGY.

New and Enlarged Edition.

**LESSONS IN ELEMENTARY PHYSIOLOGY.** By THOMAS H. HUXLEY, LL.D., F.R.S. Enlarged and Revised Edition. Globe 8vo, 4s. 6d.

### MAY NUMBER NOW READY.

## THE SCHOOL WORLD.

A MONTHLY MAGAZINE OF EDUCATIONAL WORK AND PROGRESS.

PRICE SIXPENCE. Annual Subscription, including postage, 8s. net.

### LEADING CONTENTS.

**Form-Masters and Specialists.** By F. E. KITCHENER, M.A.—**Secondary School Libraries.** By JOHN J. OGLE.—**Pioneers in Education.** V. Immanuel Kant; Philosopher, Educationist. By Prof. FOSTER WATSON, M.A.—**How to Use the Raw Material of History.** By F. BEATTY.—**The Study of "As You Like It."** II. The Characters. By J. A. NICKLIN, B.A.—**Experimental Chemistry.** (Illustrated.) IV. The Halogens; Hydrochloric Acid and Chlorides; Ammonia; Nitrous and Nitric Oxides, Nitric Acid, and Nitrates. By Prof. J. B. COLEMAN, A.R.C.S., F.I.C.—**Notes for Lantern Lectures.** III. The Tale of Troy; with special reference to Virgil, Æneid I., II. By Prof. W. C. F. ANDERSON, M.A.—**Teachers' Notes on English History, 1603-1716.** VI. The Protestant Succession, 1689-1715. By C. S. FEARENSIDE, M.A., and L. J. MCNAIR, B.A.

MACMILLAN & CO., LIMITED, ST. MARTIN'S STREET, LONDON, W.C.

## CASSELL'S EDUCATIONAL LIST. IMPORTANT ISSUES.

A New Work by H. O. ARNOLD-FORSTER, M.P.  
READY SHORTLY.

About 300 pages, Crown 8vo. Strongly bound in cloth, price 1s. 9d.

### Our Great City; or, London, the Heart of the Empire.

Splendidly Illustrated with Full-page Pictures.

CHEAP SIXPENNY EDITION  
of MR. ARNOLD-FORSTER'S Recent Work.

### The Coming of the Kilogram.

A Simple and Complete Explanation of the Metric System.

N.B.—The Teaching of the Metric System is rendered compulsory by the New Code.

CHEAP EDITION, 2s. 6d.,

OF

### "Scarlet and Blue."

THE BEST COLLECTION OF PATRIOTIC SONGS.

Edited by JOHN FARMER, of Oxford.

### RECENT PUBLICATIONS.

New and Revised Edition.

**CASSELL'S LESSONS IN FRENCH.** Parts I. and II., 2s. each; complete in One Vol., 3s. 6d.

This work (which reached a sale of 141,000 copies in its original edition) has been Revised by Mr. JAMES BOÏELLE, B.A., Examiner in French Language and Literature in the University of London. It is now in all respects suitable for the Oxford and Cambridge Local Examinations and the College of Preceptors Examinations.

**FOUNDERS OF THE EMPIRE.** By PHILIP GIBBS. 256 pp. Extra crown 8vo, prettily bound in cloth. With Four Coloured Plates and numerous Illustrations. Price 1s. 8d.; or, handsomely bound as Prize Book, 2s. 6d.

**IN DANGER'S HOUR; or, Stout Hearts and Stirring Deeds.** A Reading Book for Upper Standards. With Introduction by H. O. ARNOLD-FORSTER, M.P. With Coloured Plates and numerous Illustrations. Prettily bound in blue cloth, 1s. 8d.; or handsomely bound, cloth gilt, 2s. 6d.

**A PRACTICAL METHOD OF TEACHING GEOGRAPHY.** Book I. England and Wales. Book II. Europe. By J. H. OVERTON, F.C.S. Twenty-two Maps, interleaved with tracing paper. 6d. each.

### The Best and Cheapest Dictionaries.

**CASSELL'S FRENCH DICTIONARY.** (French-English and English-French.) 555th Thousand. Revised and Corrected from the Seventh and Latest Edition of the Dictionary of the French Academy. 1,150 pages, cloth, 3s. 6d.; half-morocco, 5s.

**CASSELL'S GERMAN DICTIONARY.** (German-English and English-German.) 222nd Thousand. 1,120 pages, demy 8vo. Cheap Edition, cloth, 3s. 6d.; half-morocco, 5s.

**CASSELL'S LATIN DICTIONARY.** (Latin-English and English-Latin.) 102nd Thousand. Thoroughly Revised and Corrected and in part Re-written by J. R. V. MARCHANT, M.A., Master of St. Paul's School, and formerly Scholar of Wadham College, Oxford; and J. F. CHARLES, B.A., Assistant-Master of the City of London School. Cheap Edition, 3s. 6d.; half-morocco, 5s.

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & COMPANY, LTD., LUDGATE HILL, LONDON, E.C.

# COLLEGE OF PRECEPTORS' EXAMINATIONS, 1900.

SUITABLE BOOKS IN THE  
**University Tutorial Series.**

## SPECIAL SUBJECTS.

- Caesar.—Gallic War. Books V., VI.** By A. H. ALLCROFT, M.A., and W. F. MASOM, M.A. Text and Notes. 1s. 6d. each. Vocabulary. 1s. each.
- Cicero.—De Senectute.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. Text and Notes. 1s. 6d. Vocabulary. 1s.
- Homer.—Odyssey. Books XI., XII.** By J. H. HAYDON, M.A., and F. G. PLAISTOWE, M.A., Lond. and Camb. Text and Notes. 2s. 6d.
- Horace.—Odes. Book III.** By A. H. ALLCROFT, M.A., and B. J. HAYES, M.A. Lond. Text and Notes. 1s. 6d. Vocabulary. 1s.
- Vergil.—Aeneid. Book II.** By A. H. ALLCROFT, M.A. Oxon., and T. R. MILLS, M.A. Oxon. Text and Notes. 1s. 6d. Vocabulary. 1s.
- Vergil.—Aeneid. Book VI.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Lond. Text and Notes. 1s. 6d. Vocabulary. 1s.
- Vergil.—Aeneid. Book IX.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. Text and Notes. 1s. 6d. Vocabulary. 1s.
- Shakespeare.—As You Like It.** By Prof. W. J. ROLFE, D.Litt. 2s.

# SCIENCE AND ART DEPARTMENT EXAMS.

SUITABLE BOOKS IN THE  
**Organized Science Series.**

## FOR THE ELEMENTARY STAGE. 2s. each Vol.

- Practical Plane and Solid Geometry.** [In preparation.]
- Machine Construction and Drawing.** [In preparation.]
- Building Construction.** [In preparation.]
- First Stage Mathematics.** Containing all the Algebra and Euclid required. [In preparation.]
- First Stage Mechanics (Solids).** By F. ROSENBERG, M.A., B.Sc. *Second Edition.*
- First Stage Mechanics of Fluids.** By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc. *Second Edition.*
- First Stage Sound, Heat, and Light.** By JOHN DON, M.A.
- First Stage Magnetism and Electricity.** By R. H. JUDE, M.A. Cantab., D.Sc. Lond. *Second Edition.*
- First Stage Inorganic Chemistry (Theoretical).** By G. H. BAILEY, D.Sc. Lond., Ph.D. Edited by WILLIAM BRIGGS, M.A., F.C.S.
- First Stage Botany.** By A. J. EWART, D.Sc. [In the press.]
- First Stage Physiography.** By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S.
- First Stage Hygiene.** By R. A. LESTER, B.Sc. [In the press.]
- Price 1s.
- First Stage Inorganic Chemistry (Practical).** By F. BEDDOW, Ph.D., D.Sc. *Second Edition.*
- Price 1s. 6d.
- Practical Organic Chemistry.** By GEORGE GEORGE, F.C.S.

## FOR THE ADVANCED STAGE. 3s. 6d. each Vol.

- Second Stage Mathematics.** Being the Additional Algebra and Euclid with the Trigonometry required for the Second Stage. Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. *Second Edition.*
- Advanced Mechanics.** By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Vol. I., DYNAMICS. Vol. II., STATICS.
- Advanced Heat.** By R. W. STEWART, D.Sc. Lond. *Second Edition.*
- Advanced Magnetism and Electricity.** By R. WALLACE STEWART, D.Sc. Lond.
- Advanced Inorganic Chemistry.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. *Second Edition.*
- Price 2s.
- Advanced Inorganic Chemistry (Practical).** By R. WALLACE STEWART, D.Sc., and WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S.
- Price 1s. 6d.
- Practical Organic Chemistry.** By GEORGE GEORGE, F.C.S.

## FORECASTS AND COMMENTS.

May 1, 1900.

The next Monthly Evening Meeting of members Fixtures. of the College of Preceptors will be held on Wednesday, May 16, when Dr. Wormall will read a paper on "Unsettled Questions of Method in the Teaching of Elementary Science."

\* \* \*

The British Child-Study Association holds its annual meeting at Manchester this year on May 3 and 4. The members of the Association will have an opportunity of studying the "child" from the concrete and practical point of view, as there are to be model lessons and educational exhibits in the High School for Girls, Dover Street, of which Miss Burstall is Headmistress. The Council of Owens College is to entertain the members at a conversazione in the new buildings of the Christie Library.

\* \* \*

A COURSE of six evening lectures on "The Poetry of Robert Browning," by the Rev. A. Stopford Brooke, begins at University College, London, on Thursday, May 3.

\* \* \*

ON May 4 Prof. Oscar Montelius will give the first of six free lectures on "Prehistoric Chronology," on the Yates foundation, at University College.

\* \* \*

MR. H. J. MACKINDER, M.A., began on April 24 a course of six lectures at the London School of Economics and Political Science on "The Geographical Conditions of the Great Powers."

\* \* \*

MAY 9 will be Presentation Day at the University of London. It is hoped that the Prince of Wales may be able to preside over the ceremony in the Senate House of the University at South Kensington.

\* \* \*

MR. AUGUSTINE BIRRELL, Q.C., M.P., is to begin his Quain lectures at the University College on May 14, when he will treat of the "Marriage Laws within the British Empire."

\* \* \*

At the Summer Meeting of the Cambridge University Extension, to be held at Cambridge next August, from the 2nd to the 27th, the subject chosen is "Life and Thought in the Nineteenth Century," and the courses of lectures are being arranged so as to present in broad outline a view of the more remarkable movements and events of the century and its distinctive contributions to our social and political life. The most important section of the meeting will be that on National Development, in which Prof. A. V. Dicey, Dr. Augustus Jessop, the Master of Trinity, and others will lecture. There will be lectures on "Educational Progress in the Century," intended primarily for teachers, and a small Educational Exhibition will be organized for illustrative purposes.

\* \* \*

The Board of Education have decided, at the suggestion of the Council of the Society of Arts, to open, on or about November 1, an Exhibition of Modern Illustration in the Victoria and Albert Museum, South Kensington. The Exhibition will consist of works in black and white intended for book, periodical, and newspaper illustrations, and will be confined solely to modern examples of typographical work executed since 1860. This limit covers the time during which photo-

graphy has been available for reproductive purposes, and during which consequently the original drawings have been preserved, and are available for exhibition. The Board will be assisted in the selection and arrangement of the drawings by an influential committee, with some additional members, which had already been organized by the Society of Arts.

THE Management Committee of the Birmingham University scheme have received the Report of the Advisory Committee appointed to consider the best means of utilizing the endowments of Mr. Carnegie and an anonymous donor for scientific and commercial training respectively, and to visit the United States and Canada for the purpose of inspecting various educational institutions. The document is long and important. Its recommendations point to the necessity of raising the endowment fund to a total of something like half a million sterling.

A COMMITTEE has been appointed to consider the organization of the Royal College of Science at Dublin, consisting of Sir William Abney, K.C.B., Chairman, the Secretary of the Department, and the Assistant-Secretary for Technical Instruction, the Commissioner of Valuation for Ireland, and Mr. S. E. Spring-Rice, C.B. The reference is as follows:—"To consider and report on the future position and functions of the Royal College of Science for Ireland with reference to technical instruction as related to industries and agriculture in that country; to report on the requirements of the college as regards staff and organization; and to make recommendations as to the arrangement and nature of the new college buildings."

It is said that the number of female students, Frenchwomen and foreigners, in the Paris faculties, including the Faculties of Science and Medicine, has increased so much during the last five years that some young Frenchwomen, Russians, and Roumanians have proposed to form themselves into the nucleus of a female association analogous to the General Association of the male students. The *Lancet* says that the object of this new association will be to make the female students better acquainted with one another, to give assistance to those who are in need of it, and to provide something of the nature of a family circle, especially for those who, having come from far and not possessing the means of frequently returning home, lead a solitary existence in Paris during the long weeks of the vacations, when study is necessarily interrupted. Only one of the female students of medicine in Paris is English.

THERE are now fourteen day training colleges in England and Wales—viz., Aberystwyth, Bangor, Birmingham, Bristol, Cambridge, Cardiff, Leeds, Liverpool, London (King's College), Manchester, Newcastle, Nottingham, Oxford, and Sheffield. Of these, four (Cambridge, Liverpool, London, and Oxford) have men students only, while Bristol is the only one exclusively for women students. The others all make provision for both men and women.

At the last half-yearly meeting of the General Council of the University of Glasgow Professor Ramsay commented on the resolution of the Court to discontinue the junior classes in Latin and Greek. The degree of M.A., he pointed out, could be taken without Greek, and he was sorry to say that the class of all others in the University who most availed themselves of the option of taking any subject instead of Greek was the schoolmaster class—the very men to whom they looked for the teaching of Greek throughout the country.

RECENT changes in foreign currencies call for the attention of teachers of commercial arithmetic. On February 27 last the American Senate and Congress arrived at an agreement as to a gold currency, which is now in use. The unit is the gold

dollar of 25<sup>s</sup>/<sub>10</sub> grains, and nine-tenths fine. The greenbacks and Treasury notes are called in.

On January 1 of the present year the Austrian currency reform, which has been in progress since the year 1892, reached its final stage. The *krone* (divided into 100 *heller*) now definitely replaces the old *gulden*, as the exclusively legal currency of the Empire. The abbreviations sanctioned are for the *krone* the letter *k.* (in distinction from the Scandinavian *kr.*), and for the *heller* the letter *h.* The Austrian exchange, as given in English newspapers, has accordingly been quoted since the commencement of this year in *kroner* and *heller* instead of *gulden* and *kreuzer*. The pound sterling exchanges at par for 25 *kroner*. All the text-books of commercial arithmetic now in use require alteration in these respects.

ACTIVE steps are now being taken for the establishment of Commercial Universities at Marseilles, Hamburg, and Berlin. The advance of commercial education is very marked in Japan. The establishment of an Imperial High School of Commerce at Tokio has had such satisfactory results that a like school is now in contemplation for Osaka, and the creation of a degree of Doctor of Commercial Science (*Shogyogakushi*) is under discussion.

THERE are four grades of commercial schools in the Japanese Empire. In schools of the second and third grades, designed for youths who have completed their fourteenth year and will devote three to five years to special study, amongst the subjects taken up we find ethics, Japanese, Chinese, and English (or other foreign language), mathematics, geography, history, economics, commercial legislation, bookkeeping, commodities, principles of commerce, business practice, and gymnastics, together occupying respectively thirty and thirty-three hours a week, with a five years' course. In the third grade correspondence and commercial arithmetic figure as additional subjects, and the whole course is more extensive.

A MOVEMENT is in progress to establish a Chair of Mining in the Welsh University, in connexion with the University College of Bangor. Wales, of course, is pre-eminently a mining country, and the idea of the new professorship seems to be popular in the north of the Principality.

THE Governors of Porth Intermediate School some months ago gave the Headmaster (Mr. Samuels) six months' notice to terminate his agreement as Headmaster. This came to the notice of the Welsh Central Board and the Charity Commissioners, with the result that the Commissioners pointed out that the resolution of the Governors to dismiss the Headmaster was invalid. We learn that another inquiry will be held by the Central Board at an early date into the alleged breach of the Glamorgan scheme for intermediate education by the Porth Governors.

On the urgent request of the Council of St. John's Hall, Highbury, the office of President (in succession to the late Lord Harrowby) has been accepted by the Rev. Alfred Peache, who was, with the late Miss Peache, the munificent founder of the college. In spite of the many changes recently made in the staff of St. John's Hall, it is stated that the number of men at the college is decidedly increasing. For a few years, possibly owing to certain regulations imposed by the Bishops on non-graduate candidates for Holy Orders, there had been a decrease. Those regulations, the *Guardian* says, the Bishops have now, to some extent, modified.

THE death is announced of Prof. W. R. Herkless, LL.D., of St. Mungo's College.

\* \* \*

THE Chair of English Literature in the University of Glasgow has been vacated by the resignation of Prof. Bradley. Mr. Edmund Gosse has been mentioned as one of the candidates for the vacant post.

\* \* \*

MR. J. MACLEAN, M.A., of Fortrose Academy, has been appointed Headmaster of Strachan School.

\* \* \*

MISS CONSTANCE E. ASHBURNER has been selected out of ninety-three candidates as Headmistress of the Lincoln Girls' High School.

THE Literary Section of the Welsh Guild of Literary Graduates has had a good sale for the first volume of its reprints of old books, which contains the works of Morgan Llwyd o Wynedd, edited by the late Warden of the Guild. The second volume will include the three earliest Welsh tracts — "Oll Synnwyf Pen Kembero" (1547), "Yn y Llyfyr hwnn" (1546), and "Ben wedy i dynny o Gyfraith Howel dda" (1550). This volume is to be edited by Mr. Gwenogvryn Evans and the Secretary. The third volume is "Drych y Prif Oesoedd," edited by Mr. Samuel J. Evans, M.A., Headmaster of Llangefni County School. This book will be ready for publication before the end of the summer. Mr. Evans is keeping in view the needs of the intermediate schools, and the book will contain notes and a comprehensive preface in the English language.

\* \* \*

THE Secretary of the Dialect Section (Prof. E. Anwyl, M.A., Aberystwyth) reported to the last meeting of the Guild that the vocabulary of dialect words and expressions which he has arranged in alphabetical order was steadily increasing. It now amounts to over 1,700 words and expressions. Some progress had also been made in tracing out the boundaries of the various Welsh dialects. The Secretary said he hoped to be able to study closely the information which he had accumulated, and to prosecute further inquiries on points of difficulty.

\* \* \*

At the last meeting of the Royal Historical Society, Mr. W. J. Corbett, Fellow of King's College, Cambridge, read a very interesting paper on "The Tribal Hidage in the Seventh Century." Mr. Corbett pointed out that the list of tribal hidages is made up of multiples of 12,000. This enables him to make a complete rearrangement of the kingdoms under the Heptarchy. Altogether the kingdoms at one time (some twelve in number) contained 144,000 hides or families; though some were treble or double kingdoms, and others half a normal kingdom of 12,000 hides or even less. So, with the hundreds of England, some are larger than others. The date of the list and its origin were assigned by the author to the Peterborough chroniclers in the middle of the seventh century. In the discussion which followed, Mr. Harrison, Dr. Seebohm, and others acknowledged that they were deeply impressed by the paper, but reserved a final opinion until the papers and maps had been published in the Society's *Transactions*.

\* \* \*

IN the new number of the *English Historical Review* Mr. Thomas Bateson has a diverting paper on "Defoe and Harley," which pillories anew the ingenious and unscrupulous writer to whom all succeeding generations have owed so much literary satisfaction. Harley and Defoe seem to have made quite a fine art of their secret and mysterious communications. To our modern ideas, Harley placed an excessive value on Defoe's venal pen. There can be no doubt that the *Review* was a vastly interesting paper in its day. Mr. Bateson somewhat cruelly says:

With its secret policy of upholding Harley, unflinchingly maintained for near ten years; its vigorous discussions of trade, politics, and

finance; its letters of threat and approval, sent by interested readers, and from time to time inserted by Defoe; its columns of small talk, which became so popular that for a while they were issued in a separate supplement; and its puffs of foul quacks and enterprising merchants, the *Review* contained every essential part of the modern newspaper, whose progress from it is simply one of specialization.

We hope that this is not quite so historical as the rest of Mr. Bateson's paper.

\* \* \*

*Literature* gives some particulars of the father of the late Miss Buss, and incidentally suggests what may have been a contributory motive for the foundation of the now famous school in Camden Town.

During the late forties he experienced a severe struggle for a livelihood, and his wife and daughter came nobly to his assistance, by establishing in 1850 a seminary for girls, then called the North London Collegiate School for Girls, which was the origin of the present foundation. Buss not only became its professor of drawing, but (sic) teacher of science, too, having first acquired the necessary knowledge of chemistry, botany, physiology, mechanics, &c., making his own models for demonstrating the latter science. In 1874 he issued (privately) a profusely illustrated volume on "English Graphic Satire," in the preparation of which he was aided and encouraged by his daughter. An excellent portrait of the artist, painted by himself in the "Pickwick" days, hangs upon the walls of the North London School.

\* \* \*

It is interesting to notice the English books set as subjects of examination for the *Brevet Supérieur*, and also for admission to certain French training colleges. The latest decree issued by the Minister of Public Instruction gives the following selection, which is to stand for a period of three years from 1900:—Wordsworth's "Ode to Duty," "Michael," "The Old Cumberland Beggar," "Jarrow Visited," "Jarrow Re-visited," "Daffodils," "The Small Celandine," "The Solitary Reaper," "The Nightingale," "The Cuckoo," "The Skylark," "A Highland Girl," and "The Green Linnet"; Dickens' "The Christmas Carol"; Froude's "Oceana"; Goldsmith's "The Traveller" and "The Deserted Village."

\* \* \*

THE list of German books to be studied for the same purpose perhaps shows a more characteristic choice, including, as it does, Goethe's "Faust" and "Egmont," Schiller's "Thirty Years' War," short poems by both these masters, together with selections from Heine and Bürger.

\* \* \*

Nor the least interesting sight to the English visitor at the Paris Exhibition will be the books sent by eminent London publishing houses, under the auspices of the Publishers' Association, which will be shown in the British Section. Many of the books submitted have been rejected by the British Commissioners owing to the lack of space; and the selected books have now been catalogued and forwarded to Paris.

### COMMERCIAL EDUCATION IN SECONDARY SCHOOLS.

ON April 4 Dr. WILLIAM GARNETT, Secretary to the Technical Education Board of the London County Council, took the Chair at a joint meeting of the College of Preceptors and the Assistant-Masters' Association, when Mr. A. KAHN, M.A., of University College School, read the following paper on "Commercial Education in Secondary Schools":—

The question of commercial education opens up at once the whole problem of the curriculum. Thirty years ago the grammar-school master was scarcely conscious of the existence of such a problem. To him, classics in the morning and mathematics in the afternoon were the dumbbells and bars by which the constituent parts of the mind were best developed. The faculty psychology alone was the basis of the curriculum. The pupil was by mental gymnastics to be made adaptable for all the duties of life.

Then there came a race of schoolmen who were driven to confess that knowledge itself, knowledge of the world, was a necessary equipment for life. True, they said, it is the function of education to develop all the faculties; we must have mental gymnastics; but,

*ceteris paribus*, those subjects of study are to be preferred which not only serve as disciplines, but also impart useful knowledge. Indeed, certain knowledge is so indispensable that the curriculum must find room for it, even in the absence of "disciplinary value." Thus the subjects of study came to be regarded as (a) educational and useful; (b) educational but not useful; (c) useful but not educational.

In such a view of the curriculum the mind is looked upon as consisting of a number of communicating departments—memory, imagination, observation, judgment, reasoning, emotions, will—the efficiency of each department increasing with its employment. Now experience shows that the trained powers are not transferable from one field of mental activity to another. You may be a good judge of a horse, but a bad judge of pictures; and yet the process of judging is the same in the one case as in the other. The keenness of observation and sagacity of inference of the horse-expert are powers only as long as they are exercised on horses. That a man may reason well in space-relations and badly in matters of human conduct is a phenomenon of daily experience. We may be able easily to recall mathematical formulæ without being able to recall melodies and colours. Poetic imagination does not carry with it scientific imagination. The emotions of the epicure are excited by the sight of a festal banquet, whilst poverty and suffering may leave him untouched. My point, then, is this: that the powers of the mind are confined to the spheres of ideas in which they have been developed. And, if this be conceded, it follows that in the determination of the curriculum we have to consider not only what powers, but also what concepts, will contribute to the attainment of the end of education.

There seems no meaning, therefore, in the distinction between educational and useful subjects. The distinction applies more correctly to method. A number of isolated facts strung together without system form an appendage; they are mere impressions of sound and sight; but, if the facts are acquired by the processes of thought and the ideas are woven into one pattern, the treatment of the subject is *educational*, and power is developed for apperceiving new ideas in the same field. A common instance of uneducational method is to be found in the teaching of elementary algebra, which contents itself with securing manipulation of symbols without aiming at an extension of the concept of number.

The curriculum, I have tried to show, must stand in direct relation to life itself. It is the teacher who must make the curriculum educational; that is to say, it is the teacher who must develop power and cultivate interest in the fields of thought and activity that are covered by the curriculum. Now a large portion of life consists of the work necessary for our maintenance, and education must therefore be incomplete if it does not concern itself with the preparation for the sphere of work which the pupil is to enter. Neither from the ethical nor from the psychological point of view can there be any distinction in kind between that portion of education which prepares him to perform his share of labour with efficiency and that portion which does all the rest to prepare him to live the life of a good citizen of his country and of the world.

If education, then, is to be a complete equipment for life, it must include technical education. I wish to consider this evening the special education demanded by commercial life, and how far secondary schools should supply this demand. In dealing with this subject one experiences the difficulty of differentiating the technical from the general, because the qualifications of the ideal man of commerce, as a man of commerce, coincide in a large measure with those which we associate with the ideal citizen. The commercial man is placed in the turmoil of life itself; his operations are by their very nature always shared by others. The whole commercial fabric is based on trust and good faith, and honesty and integrity of character must be from first to last the distinguishing feature of the ideal business man. Preparation for commerce will therefore insist with special force on all those elements in education which are closely bound up with the formation of character. Again, much of the knowledge and skill which the man of business requires is furnished by the course of studies planned irrespective of the exigencies of commerce. Arithmetic, English composition, foreign languages, are all subjects of a general curriculum, and at the same time are of direct utility in the office and on the exchange.

Now, we cannot take a survey of the commercial community without being struck with the general ignorance that pervades it. I would suggest the following questions to be put to an average clerk, as a test of his commercial intelligence:—

1. What is the effect of writing "not negotiable" across a cheque?
2. Explain the functions of the Clearing House.
3. Say all you know about a bill of lading, a charter party.
4. Explain the currency systems of France, Germany, Austria, and the United States.
5. Since when have we had free trade in England? Are there any other European countries at the present day with the free trade system?
6. What has been the effect of the closing of the mints in India upon Chinese trade?

You would, I am afraid, get very little comfort from the answers. The public generally has an exaggerated idea of the training afforded

by business life itself. The ordinary parent believes strongly in taking away his boy from school at fifteen, or even fourteen, and sending him to the office to earn 6s. a week. There is a very large demand for this cheap labour; and headmasters of London schools will tell you that they are continually receiving applications for smart boys who can write neat hands and are quick at figures. But, while the supply of boy labour is scarcely equal to the demand, there is always a crowd of candidates for a clerkship worth 25s. to 30s. a week. The office training has made an unskilled labourer of the boy who wrote a neat hand; and his labour is a glut on the market. But the potentiality of British commerce offers almost infinite room for men possessed of knowledge and skill, and the problem, therefore, that presses for solution is how to replace the ignorance of to-day by commercial intelligence and power of to-morrow. Let me say at once that I believe that experience itself must always supply an important factor in the equipment for commercial life; but, under modern conditions, the commercial probationer is his own teacher, and the value of his experience will depend upon the adequacy of his preparation. The inefficiency of the commercial assistant must, therefore, be traced to a deficiency in his education.

I tried to point out at the beginning of my paper that intelligence and interest in a particular pursuit must be developed by disciplines that bear upon the pursuit. This pedagogical principle has found confirmation, if not expression, in the creation of modern schools and modern sides; but, unfortunately for commerce, there have been influences at work which have disturbed the balance of the curriculum of these schools, and made but light matter of literary studies. These are of double importance to commerce, for not only do they stand in intimate relation to the training of a morally directed will, but they form a large and essential part of the basis of knowledge directly applicable to commercial questions. A comparison of the English second-grade secondary school with the German *Realschule*, for instance, reveals at once the far higher importance that the latter attaches to the literary side of the curriculum. Taking one of the authorized programmes of the Prussian *Realschule*, I find that, on the average, throughout the school the humanities take up more than twice as much time as is allotted to mathematics and the natural sciences. Prussia has no South Kensington and no schools of science. The debt that German commerce owes to education is due largely to the admirable German secondary school system, in which the modern schools take a prominent place. And I would lay stress also on the excellence of the teaching that is characteristic of German schools. The teacher of the *Realschule* is trained for his work; his tenure is secure; he is adequately paid; and provision is made for his old age. Look for a moment at the question of modern-language teaching. The Report of the Commercial Education Committee of the Technical Education Board tells us: "We are strongly of opinion that modern languages should be taught, as far as possible, as *spoken* languages." With this we shall all agree. But where are we to get the teachers who are themselves fluent linguists? The German modern-language master spends a year in England and a year in France. He has every encouragement given him to prolong his training. The English secondary-school master has no inducement held out to him to spend time and money abroad after the completion of his University course. I hope I may be pardoned for referring to so commonplace and mean a thing as money. I do not find it mentioned in reports of conferences on commercial education that have from time to time been held; and the Chamber of Commerce, that has issued elaborate schemes, and offers large prizes and scholarships, seems never to have given a thought to the improvement in the lot of the teacher.

Although the *Realschule* has done much for German commerce, there is a growing feeling that it does not take sufficient cognizance of branches of knowledge that have an immediate bearing on the conduct of business and commercial development. There is an increasing tendency in Germany to establish schools with a greater commercial bias or to add commercial departments to existing schools. In Bavaria, for instance, there are now ten *Realschulen*, in which a modification of the ordinary curriculum is introduced in the last two years of the school course for pupils preparing for commercial life. If it is true of the German modern school that it does not sufficiently cultivate an interest for commerce and higher commercial studies, then it is ten times true of the English modern school, with its strong industrial bent. In our modern secondary schools, then, I would urge a bifurcation during the last year, or the last two years, into a commercial and an industrial section. In the smaller schools many of the subjects might, of course, be taught in common to the two departments. The course of study that I have in my mind for the commercial department would consist of English literature and composition, history including a survey of the great periods of the world's history, geography with special regard to its economic side, one or two modern languages, commercial knowledge including descriptive economics, commercial arithmetic and algebra, geometry and mensuration, chemistry to lead up to the examination of merchantable products, book-keeping. Subjects like shorthand and typewriting I would make optional.

An understanding of the share that commerce contributes to the world's well-being will implant respect for commercial work, and will counteract that baneful and immoral conception of commerce that

makes it a mere synonym of money-making. I have before spoken of the paramount importance of character in the business man. I cannot but believe that a right appreciation of the economic nature of his vocation will do something to guard him against the temptation to derive gain by unscrupulous means. We must show that commerce is not gambling, and that it does not consist of giving or receiving illicit commissions. "Economics," then, should find its place in the commercial department; and I would include its study in lessons on general commercial knowledge, which would give some idea of commercial organization, legislation, and technique. With this subject of "commercial knowledge" should be co-ordinated a large portion of the arithmetic. Thus, a discussion on *Capital* would lead to questions on interest; with the chapter on *Companies* should go the arithmetic of shares. *Bills of Exchange* would lead in their train questions on discount and on exchange. With *Insurance* we should have questions on premiums and annuities. *Contracts* would lead to calculations in which enter all, or some, of the elements of commission, insurance premium, freight, and exchange. *Telegraph Codes* would take us to questions on combinations and permutations; and so on, and so on.

Commercial arithmetic suffers at present from a want of textbooks that are in touch with the actuality of transactions. Take, for instance, the little book on "Commercial Arithmetic" by Mr. Taylor, of Nottingham. It has run to a third edition, and is evidently extensively used. The book contains four examples on the finding of simple interest. The first has a period of 3½ years, the second 12 years, the third 57 years, and the fourth 8½ years. If the writer had had any notion of commercial operations, he would, of course, have turned his years into days. Then, again, in nearly every example of compound interest we have the absurdity of interest being payable yearly, while the whole amount is made due before the expiration of the year. An example on stocks puts "Goschens" (2½ per cent.) at 96½; and in a question on exchanges the price of silver is quoted at 5s. per ounce. (The date of the edition before me is 1896.) There is a point in this connexion which deserves special mention. We have no decimal coinage, but we can make one for the purposes of arithmetic. Facility in decimalizing money and evaluating the decimal is the secret of the commercial ready reckoner. Strange to say, the books that make commercial arithmetic a speciality have all, to my knowledge, failed to grasp the simplicity of the little problem, although as long ago as 1870 Messrs. Sonnenschein and Nesbitt showed that the number of farthings is equal to the number of thousandths of a pound + ¼ of ¼ of that number.

I need not insist on the important part which modern languages must play in the curriculum; but I must part company with those who believe that the teaching of French and German should be mainly occupied with the translation of business letters. This practice in correspondence generally amounts to nothing more than words, words, words. It arouses neither enthusiasm nor interest; it is utterly barren. To sacrifice to this stuff a knowledge of some of the great French and German masterpieces is a cruel injustice to the boys. What I should do, if time permitted, would be to give through the medium of French and German a systematic account of the commercial methods, machinery, and important laws of France and Germany.

In the conduct of a commercial form I do see a danger—the danger that its course of studies may degenerate into mechanical routine work. Care would have to be taken that general culture and those disciplines that are the bases of higher commercial studies received their due share; and equal care would have to be taken that the commercial department was not made an asylum for the outcast.

So far I have had in my mind second-grade secondary schools only. A system of commercial education will also include evening instruction, first-grade schools, and commercial institutions of University rank. The title of my paper precludes me from dealing with the functions of evening classes or of the University; but I shall not have completed my subject if I do not say a few words on the higher commercial education suitable for a boy who does not enter business before the age of eighteen. I confess that higher commercial education appeals neither to the average merchant nor to the average parent. It is something, however, that touches the whole nation, its commercial security, and commercial development. For you will surely agree with me that in a country like England, with a democratic Government, it is a matter of the greatest concern that the commercial community shall have as leaders men capable of considering questions of currency, tariffs, taxation, treaties, and of inquiring into the commercial conditions of other countries, their policies, and their methods. A proposal has often been made to establish a commercial institute with a two or three years' course. The London Technical Education Board recommends as a substitute the formation of commercial departments in first-grade schools. The advantages that must accrue to a commercial school that is conducted as part and parcel of an efficient public school are obvious; but this association will at the same time weaken the support from other schools. The experiment is being made. With the assistance of the London Technical Education Board, we have established a Commercial Department at University College School. To put before you its aim and character I cannot do better than read to you our programme:—

## UNIVERSITY COLLEGE SCHOOL,

## COMMERCIAL DEPARTMENT.

The minimum age of admission is fifteen. Attainments must be of standard required for passing one of the following examinations (one modern language being included among the subjects):—Cambridge or Oxford Local Senior Pass or Junior Honours; London University Matriculation; C.O.P. First Class. Intermediate L.C.C. scholars will be admitted to the course if they can show a satisfactory knowledge of French or German.

The aim is to prepare (1) for the higher branches of commercial life, (2) for an institution of University rank in the higher branches of industry and commerce. The course is two years in length. At the end of the first year an examination will be held for admission to the second year's course. At the end of the second year's course, the pupils will present themselves for a leaving examination conducted by the Technical Board, on the result of which examination certificates will be granted. The examinations will be partly oral.

## COURSE OF STUDY.

English literature and composition, commercial science, economics, commercial arithmetic, commercial history, commercial geography, book-keeping, mathematics.

Two of the following languages:—French, German, Spanish, Latin.

Optional: chemistry, shorthand, typewriting, drawing, higher mathematics.

English.—Selected works of English literature, e.g., Bacon's Essays, Burke, Arthur Helps. Essay writing, précis writing, practice in speaking, debates on commercial topics.

Mathematics (first year only).—Algebra: progressions, permutations and combinations, logarithms, annuities, and compound interest. Geometry: Euclid III., IV., VI. Trigonometry: elements up to and including solution of triangles, with special reference to the processes of surveying.

Arithmetic (first and second year).—Rapid addition, abridged methods of multiplication and division, rapid decimalization of money; application of arithmetic to percentage, proportion, calculation of averages; interest, discount, commission, calculation of present value, C.I.F.; foreign weights and measures, exchange, banking operations, international stock exchange transactions, sinking funds, conversion of loans. Frequent practice in mental arithmetic and casting up of profit and loss.

History.—(1) Short sketch of the industrial and commercial history of antiquity. (2) Commercial and industrial history of the middle ages; centres of commerce; divisions of society in England; Peasants' revolt and economic effects. (3) From the discovery of America up to the invention of the steam engine; special study of the development of England's foreign trade. (4) The industrial revolution.

Geography (first and second year).—Physical geography; elements of geology, especially as regards coal and metals; agricultural, industrial, and commercial geography of the world; British colonies.

Economics (second year only).—Nature, scope, and methods of economic science; production and distribution, labour, capital, division of labour, values; free trade and protection; equilibrium of demand and supply; money; credit; wages; relation of State to labour and trade.

Commercial Knowledge (second year only).—The machinery of business. Merchant, trader, &c.: principal, agent, partners; companies, company law, syndicates and trusts; employers' liability; transit by land and water, navigation law; tariffs, banking, bills of exchange and other negotiable instruments; insurance, hypothecation; chambers of commerce and consulates; patents and trade marks; contracts, telegraph codes. To be illustrated by (a) reference to actual reports of commerce and current newspapers, (b) visits to docks and large commercial and industrial houses, banks, &c.

Modern Languages.—French and German: Reading of works of travel and industry, economical treatises, descriptive economics; commercial condition of foreign countries taught in the foreign language; commercial correspondence, essays—the foreign language to be used as the vehicle of teaching as far as possible; deciphering of foreign handwriting.

Spanish, Italian: reading, elementary grammar, conversation.

Chemistry; Shorthand (Pitman's or Script); Drawing: Freehand, drawing to scale.

We have uphill work before us, because we have to convert the parent, the merchant, and perhaps also the schoolmaster.

Mr. BAKER said that a large proportion of the boys in the school of which he was headmaster would enter commercial houses in the City on leaving school, and these boys would be better fitted for their work if a good scheme of commercial education could be adopted for the fifth and sixth forms. But at present there was little inducement to boys to remain at school in order to undergo this training, as at the end of it they could not secure a better position than they might have done without the training eighteen months earlier. Merchants, in fact, did not appear to require the services of well

educated lads, and in some cases they positively discouraged efforts on the part of their employees to acquire knowledge which might be of use to them in business. It had been said that commercial education suffered from a lack of efficient teachers, and he was afraid that this state of things would continue so long as the position of teachers in this country contrasted so unfavourably as it did with that of teachers on the Continent. In France and Germany teachers were encouraged to acquire the necessary knowledge, and were sure of adequate remuneration when they had completed their training. If similar inducements were offered here, there would no doubt be an ample supply of properly qualified teachers. He thought that the lecturer had somewhat exaggerated the reluctance of headmasters to let their boys enter special commercial schools. Every teacher would naturally prefer that a promising boy who had been for some years under his care should complete his school career with him; but no headmaster would object to a boy entering another institution if by so doing he would receive special training which the school curriculum did not provide for.

Mr. PATON thought it was very hopeful for the new venture that it was in the hands of a man who thoroughly believed in the humanities, and who was going to treat commercial education, not as the education of a machine, but as a branch of liberal education. Up to the age of thirteen or fourteen, in fact, it differed in no essential respect from ordinary school education. It was undesirable that special commercial schools should be established in which the curriculum should be confined to commercial subjects, because in teaching such subjects utilitarian methods must almost necessarily predominate, with the result that both mind and character would be dwarfed. It was commonly said that a boy who was clever was too good for business, but he held, on the contrary, that there was no better field for the development of a man's intelligence than a large commercial establishment. It was important that commercial education should not be begun too early, as otherwise, although efficient clerks might be produced, they would not be men capable of adapting themselves to new conditions, able to plan and able to grapple with the real problems of commercial life. That there was need of such men was shown by consular reports, from which it appeared that English trade was being ousted from one market after another.

Mr. G. BROWN said the new Commercial Department was fortunate in having the support of the Technical Education Board, and in starting with a selected set of pupils of London schools. But, if it was to prove a success, it would be necessary to convince the heads of commercial firms that the training given would be really serviceable. At present there was little demand for higher commercial education. It was true that it was requisite for the few who were to become pioneers of commerce, but for the great majority of men employed in business houses all that was required was rapidity of calculation, ability to write a letter and spell well, and ordinary tact and intelligence. Then, too, the prospects offered were hardly such as to warrant the expenditure of much time and money in special preparation. The average commencing salary was from eight to twelve shillings a week, and for a large proportion of employees there was small prospect of advance beyond fifty pounds a year. He was opposed to the conversion of ordinary secondary schools into commercial training institutions. A wisely arranged school curriculum should provide for the proper general training of boys intended for commercial life as well as for those who were to follow other pursuits, and it was useless for boys to commence to specialize until their future career had been definitely decided upon. The success of Germans in commercial enterprise was largely due to the high level of their general education, and this was assisted by the encouragement and support given by the German Government to their teachers—a support which was unfortunately entirely lacking in the case of secondary-school teachers in this country. The Technical Board were doing something to supply this deficiency, and he felt sure that any money they might spend in this way would be well spent. He could not agree with a previous speaker that England was far behind other nations in commercial progress. On the contrary, he thought this country was fully maintaining the position it had won. The reason for this was to be found, not in the training obtained at commercial institutions, but in the character of Englishmen. Tact, determination, power of taking pains, willingness to work through periods of pressure, and eagerness to advance—these were the qualifications required for commercial men, and these were the qualities that teachers should try to develop in boys who were to make their way in the world of commerce.

Mr. SHIPHAM questioned whether it would be wise to give to a school with such a liberal curriculum as that sketched by Mr. Kahn the title of a commercial school, as in the event of the school proving successful an impetus would be given to the demand for an education of a utilitarian and inferior type.

Mr. SONNENSCHNIG said it was true that at present English commerce was ahead of that of other nations; but it was doubtful whether it would remain so, considering the great progress made by Germany during the last hundred years. He hoped that an English Minister of Commerce would be appointed, as such a Minister might remedy many of the things that shackled our trade, and could promote commercial education far more effectually than the Technical

Board could do. Amongst other things, a Minister of Commerce might arrange for the introduction of the metric system and its adaptation to English trade, a change which could be introduced with very little disturbance of our present methods. The reason why employers preferred German clerks was that they were better educated than English ones, and it followed that, if this state of things were altered, the German clerk would no longer find employment in England. He agreed with the lecturer that it was undesirable to restrict the reading of French and German to commercial letters. This kind of reading did not afford the culture which was to be derived from the study of general literature, and which was so necessary to the formation of character.

Mr. LANGLER supported Mr. Barker in refuting the accusation made against teachers, which seemed to involve unwillingness on their part to promote the welfare of the boys under their charge.

Mr. KAHN having replied to the various speakers, a vote of thanks to the lecturer concluded the proceedings.

## TWO HUNDRED YEARS AGO.

It is easy to take our educational privileges and blessings as a matter of course, and without very much thought or gratitude. But these things have not been always so; indeed they are startlingly new, as one realizes in reading any book of biography or social custom earlier than the middle of the present century. Seventeenth-century England looked with very little favour on learned women. In Mrs. Earle's recent book on "Child Life in Colonial Days" there is plenty of evidence that colonial opinion on this question was even more conservative. In that book Mrs. Earle gives us a graphic picture of the life of the wives and daughters of the men who had left these shores to settle beyond seas, and build up a new life for themselves and their families. That the colonial women of the seventeenth century were "notable housekeepers" there is not a shadow of doubt. One stands amazed before the chronicle of their labours and accomplishments. They were the clothiers of the community; spinning and weaving, dyeing and bleaching, cheese-making and soap-boiling—these were only some of the numerous duties they performed. Needlework of the most fantastic and intricate kind, lace-making, and the most wondrous quilting, occupied the spare moments of these industrious housewives, and it is no wonder if they had little leisure to spare for intellectual pursuits properly so called.

Mrs. Earle gives a typical day's work of a young eighteenth-century girl, who lived in Connecticut, and kept a diary. Here is Abigail Foote's record:—"Fix'd gown for Prude. Mended mother's riding-hood. Spun short thread. Carded tow. Spun linen. Worked on cheese-basket. Hatchelled [combed] flax with Hannah: we did 51 lbs. apiece. Pleated and ironed. Read a sermon of Doddridge's: spored a piece. Milked the cows. Spun linen and did fifty knots; made a broom of guinea wheat straw. Spun thread to whiten. Set a Red dye. Had two scholars from Mrs. Taylor's. I carded two pounds of whole wool and felt *nationly*. Spun harness twine. Scoured the pewter."

A pretty good record, too, and varied! Is it not, perhaps, a little humbling to modern readers? There are some curious items in the day's account, which set us wondering. The sudden appearance of Dr. Doddridge's sermons in the list is unexpected. After such a hard morning's work something lighter would have been allowable for Abigail's reading. But she was clearly a serious-minded maiden, and naturally betook herself to sermons. Then there is the mention of the two scholars from Mrs. Taylor's. Can it be that Abigail added the profession of teaching to her other employments! It is impossible to decide. Then comes the final confession, "*felt nationly*," the meaning of which word is not clear, but it seems to imply a sense of satisfaction over a well spent day; and, if that is a true interpretation, surely Abigail Foote was entitled to the feeling. We should have felt not only *nationly*, but absolutely exhausted, in her place.

In Governor John Winthrop's "History of New England" (1646), there is an instructive paragraph bearing on the subject of girls' education. "A godly young woman of special parts" is said to have "fallen into a sad infirmity, the loss of her understanding and reason, which had been growing upon her divers years by occasion of giving herself to reading and writing"; and it is further alleged that she "had written many books." "If she had attended to her household affairs, and such things as belong to women, and not gone out of her way and calling to meddle in such things as are proper for men, whose minds are stronger, she had kept her wits, and might have improved them usefully and honestly."

It was, in fact, well understood that a woman's education was domestic and industrial. If a girl learnt to read and write, that was sufficient. Sometimes arithmetic was added, but in a good many cases the girls were left without any instruction at all, even in the "three R's." No doubt in the pioneering days of colonial life it was for the ultimate good of the community that the women should devote their energies mainly to such employments as sustained the life of their households, from the making of cheese and the spinning of flax to the manufacture of brooms and harness.

From that picture it is interesting to turn to the words of a seventeenth-century Englishman, who had visions of a new era in the education of women. In an essay printed in 1697, Defoe writes as follows:—"I have often thought of it as one of the most barbarous customs in the world, considering us as a civilized and Christianized country, that we deny the advantages of learning to women. We reproach the sex every day with folly and impertinence; while, I am confident, had they the advantages of education equal to us, they would be guilty of less than ourselves. . . . One would wonder indeed how it should happen that women are conversible at all; since they are only beholden to natural parts for all their knowledge. Their youth is spent to teach them to stitch and sew or make baubles. They are taught to read indeed, and perhaps to write their names or so, and that is the height of a woman's education. If knowledge and understanding had been useless additions to the sex, God Almighty would never have given them capacities, for he made nothing useless. . . . Besides, I would ask such what they can see in ignorance that they should think it a necessary ornament to a woman; or how much worse is a wise woman than a fool? . . . Shall we upbraid women with folly when 'tis only the error of inhuman custom that hinders them from being wiser?"

After this chivalrous defence of women's capacities, Defoe proceeds to state what they might fitly be taught, and it is noteworthy that he dwells much on the effect of education in improving the conversation of women. That, of course, implies much beside, and behind. "They should be taught all sorts of breeding, suitable both to their genius and quality. And, in particular, music and dancing, which it would be a cruelty to bar the sex of, because they are their darlings. But besides this they should be taught languages, and particularly French and Italian; and I would venture the injury of giving a woman more tongues than one.

"They should be taught to read books, and especially history; and so to read as to make them understand the world, and be able to know and judge of things when they hear of them." But even this is not the limit of Defoe's visionary scheme of education. He goes further still, and adds, in a burst of enthusiasm and generosity: "To such whose genius would lead them to it I would deny no sort of learning, but the chief thing in general is to cultivate the understandings of the sex that they may be capable of all sorts of conversation, that, their parts and judgments being improved, they may be as profitable in their conversation as they are pleasant."

In conclusion, after another profession of faith and further argument, Defoe declares that "all the world are mistaken in their practice about women. For I cannot think God Almighty ever made them so delicate, so glorious creatures, and furnished them with such charms, so agreeable and so delightful, and with souls capable of the same accomplishments with men, and all to be only stewards of our houses, cooks, and slaves. Not that I am for exalting female government in the least, but, in short, I would have men take women for companions, and educate them to be fit for it."

That was written rather more than two hundred years since, but even yet there linger some who find themselves more in sympathy with Governor Winthrop than with Daniel Defoe. M.S.

### MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on April 7. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Baumann, Rev. J. O. Bevan, Mr. Bidlake, Mr. Brown, Mr. Butler, Mr. Charles, Mr. Chettle, Miss Crookshank, Mr. Eve, Rev. Dr. Hiron, Mr. Millar Inglis, Mr. Montgomery, Mr. Pinches, and Dr. R. P. Scott.

The minutes of the last meeting were read and confirmed.

The report of the Finance Committee was adopted.

The Rev. J. O. Bevan was appointed to represent the College at the Educational Congresses organized by the Association Internationale in connexion with the Paris Exhibition.

The following persons were elected members of the College:—

Mr. G. W. Dolbel, A.C.P., Oxford Road, Basford, Stoke-on-Trent.

Miss A. G. Doré, 50 Gladsmuir Road, Highgate, N.

Miss M. E. Gutteridge, A.C.P., Baynard Castle, Gravesend.

Mr. T. Hay, M.A. Camb., B.Sc. Lond., A.C.P., 15 Broomfield Road, Chelmsford.

The following books had been presented to the Library since the last meeting of the Council:—

By E. ARNOLD.—Arnold's Geographical Pictures.

By G. BELL & SONS.—Murray's Graded Exercises and Examination Papers in Book-keeping.

By BLACKIE & SON, LTD.—Annandale's Concise English Dictionary; Laming's Eutropius, Books I. and II.; Ryland's Pope's Essay on Criticism.

By C. J. CLAY & SONS.—MacCunn's The Making of Character; Rippmann's Hauff's Der Scheik von Alessandria.

By W. B. CLIVE.—Briggs and Stewart's Advanced Practical Inorganic Chemistry; Thompson and Mills' Lysias' Eratosthenes and Agoratus.

By MACMILLAN & CO.—Berthon's Specimens of Modern French Prose; Binns' Normand's L'Emeraude des Incas; Hyslop's Euripides' Andromache; Wall's Daudet's La Tour des Maitres.

Calendar of King's College, London.

Calendar of Royal University of Ireland, and Supplement.

Year Book of the Joint Scholarships Board, 1899-1900.

## REVIEWS.

### TWO HISTORIES.

- (1) *Sir W. Smith's History of Greece, from the Earliest Times to the Roman Conquest.* New Edition. Revised by G. E. Marindin. (Murray.) (2) *History of Greece.* By Evelyn Abbott. Part III. *From the Thirty Years' Peace to the Fall of the Thirty at Athens.* (Longmans.)

(1) It is nearly half a century since Smith's "Greece" appeared. The interval has been singularly rich in archaeological discoveries and in scholarly criticism of the Greek classics, and has even been distinguished by "finds," like the Odes of Bacchylides and Aristotle on "The Constitution of Athens." Nor has it been less marked by the growth of a keen interest, on the part of a considerable section of the public, in Greek literature and antiquities. The investigations of Dr. Schliemann, Prof. Ramsay, and their fellow-workers, and University and public-school representations of Greek plays, have appealed to a constantly increasing circle. It was time, therefore, that so useful a manual, which, based as it was on Grote's great work, embodied the best knowledge of the time, should be brought up to date. It would have been difficult to find a more competent editor than Mr. Marindin, the scholarly colleague of Mr. Wayte in the production of the new "Dictionary of Antiquities." The present edition reproduces for the most part the *ipsissima verba* of Sir W. Smith's "History," but certain portions have been practically rewritten. This is especially the case with the chapter on Greek Art and with the whole of the First Book (the Mythical Age.) Recent discoveries and speculations have added so much to our knowledge of the period that this was absolutely necessary, and we only wish Mr. Marindin had drawn even more freely on his stores of information. The chapter on the Homeric Poems is rather hard reading; it assumes too much knowledge on the part of the reader, and introduces perhaps inevitably, a good many qualifications of the view which the writer on the whole prefers.

The revision of other parts of the book seems done with care and judgment. Take, for example, the battle of Marathon and the fate of Miltiades. The map of the district is better, and the topographical particulars clearer, the result, no doubt, of more recent investigations (eastwards, by the way, is accidentally put for westwards); the more rhetorical part of the description of the conditions under which the battle was fought is slightly abridged; the question of the guilt of Miltiades and his treatment by the Athenians is dealt with in a more judicial way; and an interesting parallel between his case and that of Sir Walter Raleigh is suggested. It is not easy to say whether the editor's adherence to the lines and the proportions of the original book is justified; nearly half of it is still occupied by the history of the fifth century B.C., and no attempt has been made to deal with Greek life after the heroic age, or with the Hellenizing of a considerable part of the world, both subjects excluded from Smith's "Greece." Probably the object is still to supply a sound and trustworthy handbook for the classical student rather than a popular history appealing to the general reader. The illustrations are somewhat less numerous than in the earlier editions, but are all to the point, and admirably engraved. More than half of them are new.

(2) Twelve years have passed since Mr. Abbott printed the first part of his "History of Greece." His notes in the present volume are full of proofs that he has contrived to keep pace with the rapid growth of materials; and it says much for his enthusiasm that after all that he must have endured he declares that Greek history in the fifth century B.C. has an interest that is inexhaustible.

Holm's valuable work, which is on much the same scale as Mr. Abbott's, is in our judgment a far more interesting book. There is, of course, much more in it that is original, and the dissertations and notes are as entertaining as they are learned. But it cannot be denied that Holm is of little use to the beginner. His History appeared in the same series as Mommsen's great Roman History; and facts are grouped and inferences interwoven with facts after the method made familiar by the earlier book. We have found that students cannot make much of Holm unless they have previously endured a course of Oman; and we have often had reason to sympathize with the knowing candidate for a Bible Clerkship at All Souls who observed that the style of Herodotus is marked by the exquisite simplicity of Oman. Mr. Abbott's History comes somewhere between Holm and Oman, and is a likely book for sixth forms and University students.

The difficulties that encounter modern historians of ancient Greece are countless. On very many matters it is simply impossible to arrive at certainty. The Greek historian, whatever purpose he set before himself in writing, never undertook to supply a complete chronicle of passing events. He would select some department of past or contemporary history—perhaps of both—and everything that did not lie within that compartment he would deliberately omit. To censure Thucydides, for example, as Prof. Mahaffy censures him, because “he passes in contemptuous silence over all the artistic development of Athens, is, we hold, beside the mark.

It has been pointed out again and again that the writing of history did not in ancient times mean what it means nowadays; and the broad effect of the difference of theory is that our modern writers on antiquity are too often left by their ancient authorities wholly or partially in the dark. Over the countless difficulties thus caused Mr. Abbott passes lightly, with the single exception that he enters in an appendix into the discrepancies between the accounts of the rule of the Four Hundred at Athens given by Thucydides and Aristotle. He is very properly chary of accepting anything that rests on uncertain conjecture or doubtful combination. We do not understand how he can still hold that the election of the Athenian generals took place in May. About the meaning of a passage in which Thucydides asserts that Pericles did not hold an ecclesia during the first invasion of Attica, we do not see that there need be any question. We know that there was but one regular meeting in each prytany, and that this meeting was held on widely different dates in different prytanies. When we remember that the invasion lasted but a month or so, it is not much to suppose that Pericles, standing in the high position in which he then stood, was able to arrange that the regular meeting that would, perhaps, have taken place during the invasion should be postponed.

Of Pericles Mr. Abbott is not an enthusiastic admirer. He blames him strongly for not providing shelter and drainage for the population that was crowded into Athens during the invasion of Attica, and seems to hint that he was responsible for the awful epidemic that made the city desolate, and carried off the statesman himself and his two sons. Upon his strategy he is as severe as Pflugk-Hartung. What is possible for a power almost exclusively naval, and exposed to the attacks of a great combination of land forces, is a question that might well tax the professed strategist. “Between the seizure of Plataea,” says Mr. Abbott, “and the invasion of Attica there was an interval of nearly three months, in which . . . a blow might have been struck at Bœotia, or measures taken to secure the passes over the Isthmus of Corinth.” This is merely a repetition of Duncker’s criticism, except that Mr. Abbott ought, of course, to add “and the passes into Bœotia.” It would have been of little use to lock up the Athenian army in the passes over the Isthmus, and to have left Cithæron and Parnes open. However, Mr. Abbott gives a reference to Delbrück; and, in regard to these plans of operations, we can only say that we do not think Mr. Abbott has sufficiently considered Delbrück’s reply to Duncker (pages 89 *et seq.*).

It is very hard to write Greek history without becoming involved in an “intellectual difficulty” on which Mr. Herbert Spencer has laid stress. “Measuring other people’s actions by the standards our own thoughts and feelings furnish” is an error to which the historian of Greece is peculiarly liable. The reason is, perhaps, that we moderns feel a sympathy with the Athenian genius such as we are not capable of feeling with the haughty spirit of Rome. Greek thought dominates our schools, and we are apt to imagine that, when we take to thinking, we think like the Greeks. So we sometimes censure or praise a Pericles for reasons that would never have occurred to a Greek of the fifth century before Christ. To the era of Tory Mitford and Radical Grote there has succeeded the era of modernizing historians—the school of which Müller-Strübing was once so conspicuous an ornament, and in which Prof. Mahaffy is now a distinguished teacher. Mr. Abbott, so far as we remember, does not quote either Müller-Strübing or Prof. Mahaffy; but he occasionally thinks as they might think.

The volume closes with a useful compilation entitled “Literature, Art, Society, &c.” We note with interest that Mr. Abbott follows Mr. Haigh’s views on the production of tragedies, and we think it would have been well to point out that the statements in Gardner and Jevons’s “Manual” are, in some cases, at variance with Mr. Haigh’s opinions.

## NIMIUM IN PARVO.

*A Brief History of Eastern Asia.* By J. C. Hannah, M.A. (Fisher Unwin.)

Mr. Hannah has essayed a sufficiently formidable task. In the compass of 274 pages he has compressed the history of China, Japan, Tartary, Burmah, Siam, and India, from the semi-mythical Hwangti, who regulated weights and measures in 2332 B.C., to the occupation of the Philippine Islands, in 1898, by the forces of the United States. Evidently, then, the field is an enormous one, and the author would, perhaps, protest against any but technical criticism, against the merest hint that the result of his labours is neither interesting nor illuminative. He would say that his book is, of necessity, an outline only, an affair of dates, of battles, of conquests, and of dynasties; and that no one would think of criticizing the cheerful occupants of the cases in a surgical museum because they do not compete in beauty with the Venus of the Louvre. There is, of course, a good deal to be urged in favour of such a plea; and we may say at once that, if any one desire a handy compendium of names and dates referring to the Far East, no better volume can be found than Mr. Hannah’s. The perpetual forays and raids (rather than wars) of Tartar tribes, the feuds of Kiptchak and Uzbeg, the battles fought by Huns and Turks, the rise of Chang and the fall of Wong—all such matters may be found briefly set down, dated, and indexed. As a skeleton, then, the “Brief History” is very well; and the student who likes to regard the great epic of the East in a “bony light” will find his account in possessing Mr. Hannah’s book.

But, from the standpoint of true education, how thin it all is! Dr. Johnson, we know, liked history to be composed of hard facts, with reliable dates attached; he laughed at the “painted style,” as he called it. But these axioms were certainly delivered in the most drowsy moments of our good old Homer. For what does it come to, after all, this succession of names, barbarous and outlandish, this dry roll of massacres of savages by savages, this recitation of emperors whose titles sound like gongs beaten out of tune? It is simply an elaborate variant of the great dictum of Mr. F.’s aunt: There are milestones on the Dover road—an insignificant catalogue of events, which lie like useless lumber in the cells of the memory, keeping out far rarer store. The history of man, whether Asian or European, is surely something far more than a litany of battle, and murder, and sudden death. The inhabitants of India have always fought one tribe with another. Doubtless; and what does that matter? The prerogative facts in Indian history are surely, not the bloody brawls which Indians indulged in, in common with all peoples of the earth; but rather Indian art and Indian thought—those marvellous hill temples that stand in the wastes of Ceylon, making Coleridge’s opium vision seem but a literal history; the vast metaphysics which still keeps its secrets, and smiles calmly at the “yea” and “nay” of the young physical science of the West. And there are the great *décor* of Indian life, the wonders of its sacred cities, all the colour and glow of the swarming streets, the splendour of temple and palace, the suggestion, always present, of myriads who lead a life quite secret and remote from anything that we have dreamed of in the West, who have lived that hidden life age after age, unchanged and unchangeable. To tell of these things, surely, is to tell the history of India; to realize such things is to be “educated” in Indian history, since it is to understand all that is significant in the life of Indian men and women.

Of course the historical skeleton is necessary; but it is, emphatically, a skeleton to be kept in a cupboard, to be glanced at now and again, and immediately to be decently hidden from view. The human mind is a vessel of strictly limited capacity, an instrument of strictly limited powers, so that Darwin, who had turned his intellect into a fact-grinding machine, could relish Shakespeare no more, and the youth who excels as a lightning calculator is not likely to appreciate Keats or to rival him. There was a time, of course, when the dynasty of Gradgrind reigned, and ideas were nothing accounted of, but this furious and barbarous Tartar race has been dispersed, and we are generally agreed that facts are not of the slightest consequence save as the embodiment of ideas. It will be admitted that it is highly desirable that English boys and girls should understand a little of the East and the Easterns, and to this end we would recommend an agreeable compilation known as the “Arabian Nights,” with certain of the works of Mr. Rudyard Kipling. The study of Mr. Hannah’s “Brief History” is for those of riper years.

## A NEW CYCLOPEDIA.

"The Temple Cyclopaedic Primers."—(1) *A History of the English Church*. By the Dean of Gloucester. (2) *Ethnology*. By Dr. Michael Haberlandt. (3) *Dante*. By Edmund G. Gardner, M.A. (4) *The History of Language*. By Henry Sweet, M.A. (5) *A History of Politics*. By Edward Jenks, M.A. (6) *A History of South Africa*. By W. Basil Worsfold. (J. M. Dent & Co.)

We have here a very promising new series of neat little volumes, which lay the foundation of a library of condensed information by competent writers on great subjects. As the titles of the first six volumes testify, the selection of subjects is, so far, judicious and comprehensive, and the manuals—which may not inaptly be described as finger-and-thumb books—are such as will specially appeal to the scholar and the student.

(1) We must very cordially congratulate Dean Spence on the manner in which he has condensed the history of the English Church—a great subject—into the modest limits of a primer. It is just possible to infer from the tone of the book rather than from any distinct pronouncement that the author's sympathies go with the party which calls itself Evangelical, but not the most resolved of Catholics could deny the very admirable impartiality with which Dr. Spence tells the story of the *Ecclesia Anglicana*. There is, perhaps, a tendency to insist overmuch on the peculiar merits of Celtic Christianity—always rather a beautiful spirit than an organized body—but this is, after all, an amiable weakness, akin to the famous literary *cultus* of "Celtic glamour." We may question again whether the author's depreciation of plainsong is well considered, since there are many who would maintain that in the Gothic church and for the Gothic rite there can be no more fit or more splendid accompaniment than the grave and sonorous Gothic melody; but these are but trifles which interfere little, if at all, with the excellence and the usefulness of an admirable little book.

(2) Dr. Haberlandt has given an excellent outline of ethnology, and the value of his primer is largely due to the fact that he holds the one key to the understanding of the human enigma. He has grasped the fact that man is what he is by reason of his desire of the unknown, or in other words, through the influence of religious emotion. Tobacco, as the author points out, was originally incense; clothes were, in the first place, vestments; and the list might be indefinitely extended. Language, for example, has long been considered the *differentia* of man, and this is true, but only true if we go back to language in its beginnings when it was a solemn chant used in the lyric of incantation. And, no doubt, the first tools were ritual knives, the first roast meats were burnt offerings; nay, was not the fire itself originally a great symbol of adoration? Dr. Haberlandt, as we have said, has grasped this most important principle, and the recognition of it has enabled him to write a very striking sketch of human beginnings. It is to be regretted that he does not quite appreciate the *nuances* of the English language; there is certainly an invocation to laughter in such a sentence as: "this poverty of sentiment made his art productions rude and plump."

(3) Mr. Gardner's "Dante" is a compact introduction to the life, times, and works of the great Florentine. Only one chapter out of four treats of the "Divina Commedia"; so that the book does not tread a well beaten path, but is faithful to its title. The student who will read and master it will have a right henceforth to speak of Dante, and need not be afraid of taking his name in vain.

(4) Mr. Sweet gives us a scholarly compendium on comparative philology. No one is more competent to do so. As we read it the "science of language" assumes clearness, proportion, and attractiveness. We do it less than justice by merely mentioning its good qualities; but our mention must at least be adequate. We will, therefore, say that this is the best introduction to the subject (considering its compass) with which we are acquainted. The chapter on the "Affinities of Aryan" is excellent. Its boldness will certainly not set a single discerning reader against it.

## BOOKS FOR TEACHERS.

(1) *The Nervous System of the Child: Its Growth and Health in Education*. By Francis Warner, M.D. (Macmillan.) (2) *The Making of Character: Some Educational Aspects of Ethics*. By John MacCunn, M.A., LL.D. (Cambridge University Press.) (3) *Early Childhood*. By Margaret McMillan.

The first two books on our list may be taken as contributions to that somewhat vague domain—the library of a training college. *Nihil alienum* is apparently the motto of those who are training

our teachers. The idea is perhaps pressed too far, considering the short space of time usually allotted to a teacher to prepare for his work. However, every one will admit that the brain of a child is *par excellence* the subject that he should study, and curiously enough there are very few works dealing with it that he can easily utilize. Vague outpourings on child-study we have in all copiousness, but definite instructions and generalizations to guide the observer are the great desideratum, and to these Dr. Warner's book is a welcome contribution. Lecturers in training colleges will find it exceedingly useful to read and expound in connexion with definite experiments and observations on the children in the practising schools, and also for the students to refer to in drawing up time tables, and in arranging hours for sleep, games, and meals. Although minute details are furnished for observation, a notable warning is given that "the less a child is conscious of his own body the better," and the teacher's work is to be carried out simply and naturally without attracting the child's attention to what is being observed about him. Teachers will be glad to find a doctor emphasizing the fact that regular and moderate brain activity is as important to general health as fresh air, food, and exercise, and still more to note his insistence on the bad economy of giving girls too many written exercises, and of over-working the teacher, who, if he uses his scant leisure in reading for an examination, in over-much correction and preparation of lessons, or even in too earnest self-development, is apt to lose the spontaneity and geniality of demeanour so important in the class-room. Unfortunately, in its present state this book can only be used for reference, and hardly as a manual. With a little more clearness and conciseness it might easily have been an excellent text-book on the subject.

(2) "The Making of Character" stands at the other extreme. Written in an easy, flowing style, divided and subdivided, and provided with a marginal analysis, it aims at giving a philosophical and poetical flavour to the prosaic work of the training college. It touches lightly on such subjects as Heredity, Friendship, Citizenship, Self-development, with copious quotations from the poets, chiefly Wordsworth, and writers of text-books on psychology, chiefly Prof. James. Much of the earlier part indeed may be described as Prof. James diluted. Now he does not need dilution, and a reference to his excellent books would have been more appropriate. Neither do we need in our present stage of educational literature yet another refutation of Mr. Spencer's doctrine of natural reactions. The chapters in which the author breaks more or less fresh ground, such as that on Casuistry, are very interesting, and there is a great deal of suggestive thought throughout. The book will be a godsend to students who are troubled in writing their periodical essay. How far such essays contribute to a sound grasp of the subject is, of course, another question; but it must be owned that verbosity and vagueness are fatally easy in psychological discussion, and anything that fosters mere talk should be rigidly kept under.

(3) Miss McMillan's book is a little gushing, and a trifle socialistic; but it is a good book nevertheless. It is the outcome of close observation and a sympathetic mind, and we gladly commend it to mothers and impressionist teachers and tenders of children.

## THE GREEK LYRE.

*Greek Melic Poets*. By H. W. Smyth, Professor of Greek at Bryn Mawr College, Pennsylvania. (Macmillan.)

The text of this book is substantially a selection from Bergk's "Poetae Lyrici Graeci," with additions from the recovered poems of Bacchylides and the fragments obtained by Messrs. Grenfell and Hunt. Prof. Smyth has a remarkably wide knowledge of the literature bearing on the subject, and he has produced a book every page of which is a monument of his erudition. That the work is suited to occupy a place in the red series of "School Class Books" we cannot think. It is altogether over the heads of any school-folk with whom we ever came in contact. Thus Prof. Smyth does not stop to explain the Greek lyric metres. He writes of the complicated metrical systems as if his schoolboy knew all about the greater Schmidt and Westphal, and understood them too. He makes passing reference to the modes as to familiar things that boys might whistle on their way to school. Can he be conscious that vast numbers of people are wholly unable to grasp the most elementary principles of *stress* and *accent*; and that no less a student than Southey gave "Wellington" for a *dactyl* and "Nelson" for a *spondee*? Again, Prof. Smyth prints without a word of explanation the fragments of music discovered in recent years at Delphi. These things are duly set

forth in *five-eight* time, and sliced up into bars; and the English reader, if he is capable of plumbing the lesser mysteries of *five-eight* time, presently finds himself in the fathomless abyss of the method that controls musical accent, word accent, and syllabic quantity in Greek. It is surely startling to a beginner to find how completely word accent is disregarded in Greek music when so much attention is paid to length of syllable; because it comes to this, that the musical stress accent throws a *falae* stress accent on to an unaccented long or short syllable whenever, as constantly happens, there is no accented syllable in the *thesis* (according to the Greek usage) of the foot. This might not seem a necessary assumption were it not that the performers danced as they sang. Otherwise it would not be necessary to assume that there was a musical stress-accent placed on the *thesis* when the syllable or syllables of which it consists are without accent. To take a familiar modern instance. Every one knows that singers begin the great *aria* "He was despised" in the "Messiah" by making a strong stress accent on the word "was," merely because "was" comes first in the bar. But Madame Sainton-Dolby used to phrase the passage correctly by accenting the *anacrusis* "He"; but such a device seems to become impossible when dancing is combined with singing. We only mention this problem as one of many which Prof. Smyth passes over in silence; and the result is that a book in many ways admirable is, to a great extent, barely intelligible even to the fairly advanced scholar. Even the notation employed is not a matter of common knowledge among young persons; but, of course, such a trifling matter is here assumed to be as familiar as the alphabet.

It is a further objection to the book as a class-book that many of the passages printed cannot be explained with any certainty. It is bad enough to have to tackle the choruses of the "Agamemnon" with a class; but it would be simply intolerable to go through fragment after fragment that, as far as its setting and application goes, is merely a convenient vehicle for a display of ingenuity and learning. Let Prof. Smyth severely prune his text, alter the character of his commentary, and take nothing in the region of Greek metrical systems and Greek music as known, and he may then turn out a book that will be of real value in our schools and colleges.

We greatly regret that we are forced to write thus unfavourably of a book by an American scholar so able and so learned; and it is a pleasure to qualify our remarks with an assurance that the one error consists in dressing up this work as a school-book. It is, in reality, an advanced edition, suitable to be used by scholars who have travelled some considerable distance in the ways of Greek lyric poetry. Even for such, there is very much to be learned from Prof. Smyth's introduction and commentary; and we hope that the editor will secure for his work a wider circle of readers, by adopting our suggestion that he should issue a smaller and more elementary book, adapted from the volume under notice.

#### ARISTOTLE.

*The Ethics of Aristotle.* Edited by John Burnet. (Methuen.) This new edition of the "Ethics" of Aristotle contains within the compass of a single convenient volume all that University students will require. Sir Alexander Grant's commentary—the permanent value of which is acknowledged by Prof. Burnet—is naturally no longer abreast of Aristotelian scholarship. Sir Alexander Grant was a pioneer: he cleared the road for others to tread, and his work was finished. For the student of the present day the essays prefixed to that edition retain their use; but the commentary is out of date. The edition that replaced Sir Alexander Grant's at Oxford was Prof. Stewart's—an admirable work of great erudition, but suited rather to the doctor than the disciple. "Greats" candidates will welcome in Prof. Burnet's more modest work a commentary brief, but, for the most part, adequate. Conflicting views are sufficiently indicated in the notes; but lengthy discussion is avoided.

Nevertheless, it would be unfair to Prof. Burnet to imply that his work has no importance except as a manual for the schools. The fact is he has very definite views on the origin and nature of the Nicomachean Ethics, and he sets out his views with clearness and ability. He holds that all the books are the genuine work of Aristotle, substantially in the condition in which he left them; though he admits that they bear traces of editing. "In particular," he says, "many of the summaries and transitions break the argument in a way that can hardly be attributed to Aristotle himself, and which we do not observe in his more finished works. But this does not detract seriously from the integrity of the text." "The theory of 'duplicate passages,' advocated in this country

by Prof. Cook Wilson, he rejects on the ground that the repetitions may be accounted for by the fact that the "Ethics" is dialectical, not scientific. Several solutions, therefore, are offered of the same problem, and Aristotle must not be tied down to any one solution. It will be gathered that Prof. Burnet believes the central books, so often ascribed to Eudemos, to be genuine. As for the Eudemian Ethics, he points out that the undoubted work of Eudemos differs only from its undoubtedly "Nicomachean" counterpart in matters of detail; and he believes that Eudemos is nothing more than a commentator—the most authoritative, no doubt—on Aristotle.

This view of Eudemos has a most important bearing on Prof. Burnet's commentary. Taking Eudemos as the arch-commentator, he prints the text of Eudemos under the passages of the Nicomachean Ethics with which it corresponds; and he accepts the presumed interpretation of Eudemos as the interpretation of an oral witness, and therefore far superior in authority to all other Aristotelian commentators, ancient or modern. If this view of the matter is correct, it is clear that the Eudemian Ethics acquire an importance much greater than has hitherto been attributed to them. We think, however, that it would have been well to give a summary of the arguments by which Sir Alexander Grant and others have supported the opinion that the Nicomachean Ethics V.–VII. are in reality the Eudemian Ethics IV.–VI.; because, while we allow the force of Prof. Burnet's argument, we do not see that he has disposed of the reasons put forward by those who champion their Eudemian origin. In view of the immense effect which Prof. Burnet's belief has on his edition, we require to be entirely satisfied as to the soundness of his doctrine. As he leaves the matter, he gives us only a new theory of the relations between the text of Aristotle and the text of Eudemos; and the student will require still to acquaint himself with the older theory, and will probably be unable to decide between the two. No doubt this reticence is largely due to a desire to be brief—the reason why many great controversies are dismissed in the commentary in a few lines, with a mere "I am convinced," "I have always held." But this reticence is not wholly counterbalanced by a mere *ipse dixit*. Even the student will desire to know a little more in detail the grounds of the faith that Prof. Burnet has in him; and we think that Aristotelian scholars will rise and bombard him with questions to which he will have to reply with a more lengthy counterblast.

#### SEMITIC CIVILIZATION.

"The Semitic Series." Edited by Prof. J. A. Craig.—*Babylonians and Assyrians: Life and Customs.* By the Rev. Prof. A. H. Sayce. (Nimmo.)

The editor of this new series very justly says that, among the early peoples who have contributed to the ideas which underlie our modern civilization, there is none to whom we owe a greater debt than that which we owe to the Semites. Greece and Rome, no doubt, are young in history as compared with the Hebrews, Sumerians, Babylonians, and Assyrians. Classical studies, says Prof. Craig, of Michigan, no longer enjoy a monopoly of attention in our Universities—and, for that matter, they never did, for the Universities have never been without their Hebraistic studies, in history and customs, if not in language and archaeology. So, the editor goes on to say, the time saved by the diminished stress on Greek and Latin is, in many instances, and might be more frequently, given to the study of Semitics:—

It is here that we find the earliest beginnings of civilization historically known to us; here that early religious ideas, social customs and manners, political organizations, the beginnings of art and architecture, the rise and growth of mythological ideas that have endured and spread to Western nations, can be seen in their earliest stages; and here alone the information is supplied which enables us to follow them most successfully in their development.

The series, then, is intended to carry out these views as to the value of the earlier historical and documentary records, and to provide a number of Semitic handbooks by competent writers for the use of students, theologians, and intelligent readers. The order of issue is not to be chronological, nor in accordance with the arrangement of subjects in the prospectus. Mr. Sayce's volume is the sixth of the nine already promised, and assigned to authors of established repute in Europe and America. The present volume is excellent in itself, and serves to commend the series beforehand. It is full of narrative interest, and is distinguished by remarkable fullness of detail on the various aspects of Assyrian and Babylonian life. After a general description of the land of Babylonia and its inhabitants, Mr. Sayce depicts for

us many features of the family life of Sumerians and Semites, their education, the relations of freemen and slaves, the government, religion, law, the army, trade, land-tenure, money, wages, and prices, with many incidental customs. The story is one of very considerable interest, and it is written in a manner well calculated to attract the general reader with no pretension to scholarship. On the whole, it seems reasonable to conclude that these volumes of the "Semitic Series" will contribute much to the better knowledge and systematic study of the earliest mundane civilizations.

## GENERAL NOTICES.

### CLASSICS.

*A Textual Commentary upon the Holy Gospels.* By Edward Miller. (Bell.)

We welcome the first part of Prebendary Miller's important work on the text of the New Testament. The commentary is compiled in great part from the materials left by Dean Burgon. Mr. Miller's qualifications as a collaborator and editor in this branch of Biblical studies are too well known to need insistence here. It is enough to say that the recognized leaders of textual criticism have united in welcoming the work. As for the manuscripts, Mr. Miller starts "from the results reached by Tischendorf in his eighth edition." But important additions have been made to the apparatus by the inclusion of many collations made by English scholars. The Patristic evidence has been very extensively added to as the result of Dean Burgon's labours. The quotations of the Fathers were under his direction copied and bound up in sixteen large volumes, which, after his death, were acquired by the British Museum. Mr. Miller has had a copy made of these quotations so far as they concern the Gospels. We sincerely trust that Mr. Miller will be enabled to complete his task. The volume before us contains the introduction and the first fourteen chapters of St. Matthew.

*Lysias, Eratosthenes and Agoratus*, edited by J. Thompson and T. R. Mills (Clive), is competently done, and will meet all the needs of those readers for whose use it is intended. The grammatical notes are brief, but clear, and the introduction gives in a small compass just what is required for the understanding of the speeches.

*Livy, Book V.*, edited by A. F. Hort (Rivingtons), may be commended as an unpretending and scholarly edition. There are no pictures—which is possibly a loss, and no fine writing—which is certainly a gain. The editor has acted on the principle that "over-completeness is a vice in a school edition"; the notes meet most of the real difficulties a schoolboy encounters in a straightforward way. Perhaps they hardly do enough to add brightness to his work. We should be disposed to object to the rendering of *ex malignitate praeidae partitae* (chapter xx.), "out of jealousy at the division of the booty." Opposed as the phrase is to *ex prodiga largitione*, the meaning "niggardliness" seems more appropriate for *malignitas*.

*Eutropius, Books I. and II.*, edited by W. C. Laming (Blackie), is printed in good large type, and has plenty of illustrations. The notes are useful, but somewhat long. Probably it is desirable in dealing with such a succinct narrative as that of Eutropius to add some historical details; but it seems scarcely necessary to give nearly half a page to Julius Cæsar and Augustus, who are mentioned incidentally. The book concludes with a number of exercises for retranslation. It ought to increase the popularity of Eutropius as an elementary reading-book.

### SCIENCE.

*The Frog: An Introduction to Anatomy, Histology, and Embryology.* By the late A. Milnes Marshall, M.A., M.D., D.Sc., F.R.S. Edited by G. Herbert Fowler, B.A., Ph.D. (David Nutt.)

The late Prof. Milnes Marshall put much of that straightforwardness which was but one feature of his attractive personality into the books he wrote for students. His works on the practical anatomy of animals are in many ways the best of their kind in our language. The clear directions as to methods of procedure printed in italic, and the paragraphs devoted to each of the structures to be studied, with all their names in heavy type, appeal alike to those new to the work or only familiar with more involved text-books like Huxley and Martin's "Practical Biology." Marshall and Hurst's "Practical Zoology" covers the animal side of the last-mentioned work with the exception of the frog, to which Milnes Marshall devoted a special book. It is the seventh edition of the latter, edited by Dr. Herbert Fowler, which is now before us. Dr. Fowler's continuous working knowledge of the book since its first issue has suggested but little in the way of addition or alteration in the subject-matter. Perhaps the greatest change is to be found in the substitution of original illustrations of the metamorphosis and development for those which, as the editor says, have done duty in various text-books for a hundred and fifty years. This is a step which every one will welcome, and Miss Mabel Green's diagrams are most clear and useful. The way in which her drawings of the

tadpole stages are reproduced on the double plate between pages 98 and 99 is, however, not at all to be commended. The "process" blocks, referred to under the heading of "woodcuts" in the preface, are badly made and but poorly printed. It seems strange that the publishers of a scientific book should be satisfied with work that would not pass muster in a popular illustrated paper. One thing those who have much to do with this and similar text-books would like to see altered is the system of describing the figures. It would be infinitely better if the parts were labelled with their names instead of letters referring to a description below or on another page. More space would be necessary and less detail could be introduced into any one diagram; but the advantages would, without doubt, quite outweigh the difficulties of securing them.

### MODERN LANGUAGES.

*Charles Normand's L'Émeraude des Incas.* Edited by the late F. Aston Binns, M.A. (Macmillan.)

This is one of the "elementary texts" in Mr. Siepmann's popular series, and it is well suited for, say, a fourth form. The story will be new to most teachers; it is full of incident, partly humorous, partly sensational. Both the notes and the vocabulary show careful work on the part of Mr. Aston Binns and Mr. T. H. Bayley, of Loretto, who undertook to finish the work left incomplete by Mr. Binns's death. The text is accurately printed, the only slip we have found being *saississant* on page 30. There are three appendices, with words, sentences, and passages for retranslation.

*E. Daudet, La Tour des Maures.* Edited by A. H. Wall, M.A. (Macmillan.)

This is also one of Mr. Siepmann's elementary texts. The story is of rather an exciting nature, and is well suited for rapid reading. The notes are brief, but sufficient. The vocabulary requires revision. On the first page we tested there were eight words not to be found in the vocabulary.

*Specimens of Modern French Prose.* Edited by H. E. Berthon. (Macmillan.)

Mr. Berthon has already given us a little volume of selections of French poetry. The present book shows the same happy discrimination and the same conscientious editing. It contains ten short stories by as many different authors, averaging about twenty pages in length. It will prove particularly useful to teachers who prefer to prepare their pupils for unseen translation rather than for a set book. The biographical and historical notes are distinctly good; the renderings of difficult passages are in most cases thoroughly idiomatic.

*A Modern French Grammar.* By J. U. Ransom. (Relfe Brothers.)

On the whole a careful piece of work, following the time-honoured arrangement of rules and sentences for translation from and into French. The rules are usually well expressed, but we take exception to some, for instance, to this: "After *si*, if, use the pres., imp., ind., or imp. and plup. subj. tenses; *s'il vient*, if he comes; *si on l'eût prié*, if they had requested him." A better way of putting the rule is: "After *si* (if) use any tense of the indicative except the future and conditional, and no tense of the subjunctive except the pluperfect."

(1) *Spanisches Lesebuch für höhere Handels- und Realschulen.* By Dr. S. Gräfenberg. (2) *Italienisches Lesebuch, u.s.w.* By Dr. Luigi Forte. (Frankfurt: Carl Jürgels Verlag.)

These two volumes complete a series, the English, French, and German parts of which have already been noticed in these columns. They follow the same plan, which is to use as material those topics of commercial science, especially under the head of Products, which find special illustration in the countries respectively concerned in each volume. Thus, in the Spanish part, we find sections on the orange, coffee, vine culture, tobacco, and cork; in the Italian, like selections for marble, sulphur, cream of tartar, olives. In like manner the economic history and geography of each country are represented by readings derived from standard writers. The appearance of such books marks the rapid advance made in the practical study of languages. They should command the attention of teachers in the commercial schools, now arising amongst us, as aids of the best description to such instruction in foreign languages as is required of their institutions.

### MISCELLANEOUS.

*Elementary Physiography.* By Ernest Young. (Educational Supply Association.)

This book is primarily intended to meet the requirements of the Science and Art Department in elementary science, and is clearly printed and satisfactorily illustrated. We have, however, noticed several inaccuracies and slipshod statements which are inexcusable. The definition of matter as "that which has weight" is very unsatisfactory. In the chapter on gravitation it is stated that, if a hole went through the centre of the world to the other side, and a stone were allowed to fall, it would fall faster and faster till it reached the centre, and there it would stop and fall no further. The motion would clearly be an oscillation of diminishing amplitude. Again, what is the meaning of "Heat is a quantity," and "The specific gravity of warm bodies is less than that of cold bodies"? With careful revision the book would make a satisfactory elementary text-book for the purpose aimed at.

*Story Lessons on Character Building (Morals) and Manners.* By Lois Bates. (Longmans.)

This is a collection of some seventy little incidents from child life, illustrative of good and bad conduct, from "Honesty" to "How not to clean a slate." Teachers who have not yet acquired the enviable gift of "making up" will find the book quite a boon in dealing hour after hour with little children who are always ready for a story. Some of the lessons are perhaps too trivial to have been included, and the blackboard summaries might well have been left to the teacher's ingenuity.

*The Pictorial Geographical Readers.* Books I.-III. (Longmans.)

Talks about places and lively descriptions of natural phenomena have, with most teachers, wisely taken the place of the old learning of definitions and lists of counties, with poring over meaningless maps. The present series of text-books will be found helpful to a teacher in preparing his notes for such talks, while the intelligent illustrations and diagrams will suggest work for the blackboard. As Readers we hardly consider them so successful. The old artifice of intelligent son and ever-willing-to-inform father is resorted to, with no freshness to recommend it, and it must be remembered that children of the present day are not to be captivated by Sandford and Merton dialogues introducing solid subjects. There are some slight vaguenesses here and there; for instance, we are told that the earth's crust consists of land and water, when children are only too prone to fancy that the land stops where the sea begins. The third book of the series is free from these blemishes, is more original in subject-matter, and a more substantial aid to the teacher. Some of the lessons, such as that on the formation of the Union Jack, are not made the most of, and, as is frequent in such manuals, the order of the lessons is unsatisfactory.

*Secondary Education: a Handbook of the Board of Education Act, 1899.* (Knight & Co.)

This is a serviceable collection of documents and materials relating to elementary, secondary, and technical instruction. It includes a good historical introduction, the text of the Act of 1899, the recommendations of the Secondary Commission (1895), and the return of the Department on secondary schools (1898), with notes, and an appendix of other secondary and technical Acts.

*From Blake to Arnold: Selections from English Poetry (1783-1853).*

With Introduction, Critical Essays, and Notes by C. J. Brennan, M.A. (Macmillan.)

A very good piece of work, hailing from Sydney. The title-page is muddled, for after the name of Mr. Brennan come the names of J. P. Pickburn and J. Le Gay Brereton as "editors," and immediately after that is a preface by "the editor." The introductions are fresh and perspicacious, and the selections are generally admirable.

*A Book of Courtesy.* By H. E. Norton. (Macmillan.)

Mr. Norton writes a well intentioned and useful book. It is, in a sense, didactic, because it begins with the undoubted truth that Englishmen are amongst the worst-mannered people in the world, disliked by other nations for their rude and overbearing ways; and it goes on to show what courtesy means, to commend it by every means, to quote authorities, and to tell many stories in illustration of its precepts. It is a good book for boys.

*Morison's Chronicle of the Year's News, 1899.* Compiled by George Eyre-Todd. (Glasgow: Morison Bros.)

A serviceable diary and epitome of events now in its second year. The system of the compiler is to extract each day the leading facts and information recorded in the daily papers, and to guide the reader to what he wants by a subject-index at the end. This is a very serviceable publication.

*The First Elements of Science, arranged as Observation Lessons, and correlated with Drawing.* Parts I.-III. Written by George Ricks, B.Sc. Lond.; illustrated by Alfred Wilkinson. (Macmillan.)

This is a very careful and artistic, and, at the same time, a very simple and graphic, series of picture lessons, calculated, as the title sets forth, to combine first instruction in natural science with the training of observation and the practice of freehand drawing. The illustrations are drawn in white outline on a black ground, and they are quite large and clear enough for blackboard and class work. The text is concise, and will help the teacher to make useful and interesting lessons.

*Macaulay's Essay on Lord Clive.* Edited, with Introduction and Notes, by John Downie, M.A. (Blackie & Son.)

Macaulay's "Clive" is still the best account we have of one of the main founders of our Indian Empire. The Essay has often been edited for schools, but Mr. Downie's edition may claim to be considered amongst the rest before a selection is made. The notes are adequate, and to the point.

"The New English Series." Edited by E. E. Speight, B.A.—(1) *The New English Poetry Book.* (2) *The Adventures of Beowulf.* (3) *Selections from the Poetry of Tennyson.* (Marshall & Son.)

(1) This is an excellent selection from English poems and ballads, from Spenser to Swinburne. The choice has been made with much taste, and there are very few poor or indifferent entries. We have rarely seen a more judicious and yet catholic selection. The volume ends with

a brief glossary. A teacher in want of a literary recitation-book may be recommended to take this one into consideration.

(2) The story of Beowulf has been paraphrased by Miss Thomson in a pleasant simple style. It does not profess to be an exact translation, nor to be quite complete. It is intended for children, and seems well adapted to its end.

(3) Miss A. J. Cooper supplies a short preface to a selection of twenty of Tennyson's poems. There are no notes—which to many will be a recommendation.

*Key to the Apocalypse, or the Seven Interpretations of Symbolic Prophecy.* By H. Grattan Guinness, D.D. (Hodder & Stoughton.)

Bacon, with his usual politic caution, carefully excluded Divine prophecies from his sweeping assertion "that they ought all to be despised, and ought to serve but for winter talk by the fireside." Such an exclusion is, from a scientific standpoint, logical; because the objection to belief in Divine prophecy is included in a disbelief of miracles, and his conclusion merely negatives the suggestion that there can be a natural faculty in man enabling him to foresee future events. The very region of mystery which Bacon had no wish to probe exercised, however, the greatest fascination over the mind of Sir Isaac Newton, who probably expended more time in worthless exposition of Biblical prophecy than in writing his "Principia." Such researches have long ceased to attract either learned scientists or theologians. Dr. Guinness's plan of operations is, indeed, simplicity itself. The teaching of Scripture is consistent: Daniel has expounded his own prophecies: therefore the same relation must exist between Daniel's prophecies and those of St. John as between the figures of speech and representation used by them. So by a simple proportion sum the Apocalypse is expounded. The result is not comforting to the Church of Rome. The Douai Version makes the answer to the proportion sum come out as pagan Rome.

(1) *The Paris Exhibition of 1900, a Practical Guide.* (2) *Pocket Guide to Paris.* (Paris and London: Conty.)

Fortified with these two handy little guides, the English visitor to the Paris Exhibition, whose name will be legion, in spite of every temptation to "stop away," will find himself well prepared for his wanderings through the labyrinth. The guides are in English, clearly printed and profusely illustrated.

*The Tempest; As You Like It.* Edited by R. Brimley Johnson. (Blackwood.)

The notes to this edition are of a very simple character. There are no allusions to alternative readings of the text and no quotations from other plays or authors. They are confined to brief interpretations of difficult words and passages, and there are no philological explanations either in the notes or glossary. Whether it be wise in teaching Shakespeare to exclude all questions of literary criticism and all references to the history of language, is much disputed. Those who think that it is will find in this edition just what they want. An introduction on the style and date, the sources and "moral" of the play, covers the usual ground.

Amongst Readers we have Book IV. of Messrs. Longmans' "Pictorial Geographical Series"; and Books I. and II. of the same publishers' "Domestic Economy Readers." The latter publication promises well for a simple, well printed introduction to the subject. In Messrs. Chambers's "Continuous Series" we have a selection from Tennyson's poems, with a few simple notes of explanation, such as would come better from the teacher.

We have on our table a number of volumes on book-keeping and business operations. Amongst the best of these are *Worked Studies and Questions in the Theory and Practice of Book-keeping and Advanced Accounts (Banking and Exchange)*, by Alfred Nixon (Longmans); *Graduated Exercises and Examination Papers in Book-keeping*, by P. Murray (Bell & Sons); *Advanced Book-keeping* (Pitman & Sons); and *Business Terms and Phrases, with Equivalents in French, German, and Spanish, and Facsimile Documents* (Pitman & Sons).

We have received from Messrs. W. & A. K. Johnston two series of hanging charts on rollers, devoted respectively to *Cooking and Sewing and Knitting Diagrams*, for Standards I. to VII. They are clearly designed and coloured, and should be very useful for purposes of ocular demonstration. From the same publishers we have a similar series of "Pictures for Object-Lessons"—those submitted to us being a boldly drawn collection of *Plants of Commerce*.—Messrs. Blackie & Son send us a large portfolio of twenty-four sheets of *Shaded Drawings of Models and Ornaments for Class-Teaching*, designed by Lewis R. Crosskey, which will be found serviceable as copies, and especially useful in assisting a practical teacher of drawing.—From Messrs. Nelson & Sons we have a series of "Pictures and Diagrams" on hanging sheets, connected by a top-roller, illustrating *Animal Physiology*.—Similar in form is a "Royal Wall Atlas," comprising seven maps of *Bible Lands*.—Messrs. Ruddiman Johnston publish a series of six coloured oleographs of Scripture scenes. They are well framed and glazed, and are sufficiently attractive to adorn a wall as well as to illustrate a lesson and fix the eye of a pupil. The enterprise of the publishers in providing these framed pictures deserves encouragement.

**MATHEMATICS.**

**14295.** (N. M. W.)—Solve the simultaneous equations  
 $(x+y)(ax-by) = a(a-b)(a+b)^2$  ..... (i, ii).  
 $(x-y)(ay-bx) = b(a+b)(a-b)^2$

*Solution by* CONSTANCE I. MARKS, B.A.

Put  $ax-by = X, ay-bx = Y$ ;  
 therefore  $(a-b)(x+y) = X+Y, (a+b)(x-y) = X-Y$ .  
 Hence  $X(X+Y) = a(a-b)^2(a+b)^2$  ..... (iii).  
 $Y(X-Y) = b(a+b)^2(a-b)^2$  ..... (iv).

Put  $Y = vX$ ; then  
 $X^2(1+v) = a(a-b)^2(a+b)^2, vX^2(1-v) = b(a+b)^2(a-b)^2$ ;

therefore  $\frac{1+v}{v(1-v)} = \frac{a(a+b)}{b(a-b)}$ ,  
 $b(a-b) + v\{b(a-b) - a(a+b)\} + v^2a(a+b) = 0,$

or  $b(a-b) - v(a^2+b^2) + v^2a(a+b) = 0$ ;

therefore  $\{b-av\} \{(a-b) - (a+b)v\} = 0.$

[The rest in Volume.]

**14265.** (R. F. DAVIS, M.A.)—If O be the centre of inversion (constant =  $\kappa^2$ ), investigate the formula of transformation tangent from point P to the circle C

=  $\lambda$  (tangent from inverse point P' to inverse circle C'),

and show that  $\lambda = OP$  (or  $\kappa^2/OP'$ ) / tangent from O to C'.

Apply this to Quest. 13801. (See *Mathematical Reprint*, Vol. LXX., p. 73.)

*Solution by* E. W. REES, B.A.

$OP = \rho, OP' = \rho',$   
 $OC = a, OC' = a',$   
 $CA = r, C'A' = r'.$

Take O for origin and line CC' for axis of x.

PT<sup>2</sup>  
 $= \rho^2 - 2a\rho \cos \theta + a^2 - r^2$   
 $= (\kappa^4/\rho'^2) - 2a(\kappa^2/\rho') \cos \theta$   
 $+ a^2 - r^2$ ;  
 $P'T'^2$   
 $= \rho'^2 - 2a'\rho' \cos \theta + a'^2 - r'^2.$

[The rest in Volume.]

**14459.** (R. TUCKER, M.A.)—PQAR is a conormal circle of a parabola (A being the vertex), and AP, QR, cut in p; AQ, RP in q; and AR, PQ in r. Show that the circle pqr is given by the equation

$$x^2 + y^2 + 2ax + \frac{2S_4 + \mu^2}{4\mu} ay + \frac{1}{2}S_2a^2 = 0.$$

Also the orthocentre of pqr is  $(S_2 + 8) \frac{1}{4}a, \frac{1}{4}\mu a$ ; and  $\Delta PQR = 4 \Delta pqr$ . [For notation, &c., cf. Quest. 13730, *Reprint*, LXIX, p. 57.]

*Solution by the* PROPOSER.

Equation to AP,  $m_1y - 2x = 0$ ; to QR,  $m_1y + 2x + 2am_2m_3 = 0$ ; hence  $x_p = \frac{1}{2}(-am_2m_3), y_p = -am_2m_3/m_1.$

Analogous results for  $(x_q, y_q), (x_r, y_r)$ , whence the given result is easily verified.

(Tangent)<sup>2</sup> from A =  $\frac{1}{2}S_2a^2$ ;  
 $\Sigma$  (tangents)<sup>2</sup> from P, Q, R =  $2\Sigma [m_1^4 + 6m_1^2 + \{(2S_4 + \mu^2)/2\mu\} m_1 + \frac{1}{2}S_2] a^2$   
 $= 2(S_4 + 6S_2 + \frac{1}{2}S_2) a^2 = (2S_4 + 15S_2) a^2$   
 $= (S_2^2 + 15S_2) a^2.$

Equation to qr is  $m_2m_3y + 2m_1x = a\mu$ ;  
 therefore perpendicular from p on qr is

$$2m_1y - m_2m_3x = (\frac{1}{2}m_2^2m_3^2 - 2m_2m_3) a,$$

whence &c.

Again,  $\Delta pqr = (\frac{1}{4}a^2) \Pi (m_1 - m_2) = \frac{1}{4} \Delta PQR.$

**14225.** (Professor NEUBERG.)—Eliminer  $x, y, z$  entre les équations  
 $(x-y)(x-z) = ayz, (y-x)(y-z) = bzx, (z-x)(z-y) = cxy.$

*Solution by* R. F. DAVIS, M.A.; G. D. MUGGERIDGE, B.A.; Professor A. GOLDENBERG; and many others.

From the identity

$$(y-z)(z-x)(x-y) + yz(y-z) + zx(z-x) + xy(x-y) = 0,$$

we get  $1/a + 1/b + 1/c = 1$ ; which is the required elimination.

**14363.** (Professor NEUBERG.)—Trouver le lieu des foyers des paraboles qui ont une corde normale commune MN.

*Solutions* (1) by Professor A. DROZ-FARNY; (2) by H. W. CURJEL, M.A.

(1) La tangente en M à la parabole sera perpendiculaire à MN. Soit P un point quelconque de cette perpendiculaire. P sera le pôle de MN par rapport à une des paraboles; O étant le milieu de MN et R celui de PO, cette dernière droite sera un diamètre de cette parabole qui la coupe en R et la parallèle à MN par R sera la tangente en ce point à la courbe. Cette tangente rencontre PM en S, et comme les deux tangentes SR et SM sont orthogonales, S est un point de la directrice et MR est sa polaire par rapport à la courbe. On aura donc le foyer F en abaissant SF perpendiculaire sur MR. Dans le triangle isocèle MRO, la perpendiculaire abaissée de R sur la base MO divise cette dernière en L en deux parties égales; donc la droite LR est fixe. Si enfin de L on abaisse LG perpendiculaire à MR, on a évidemment  $MG = FR.$

Le lieu de F est donc une cissoïde d'axe ML, d'asymptote LR, et dont le point de rebroussement est en M.

[The rest in Volume.]

**14216.** (R. KNOWLES, B.A.)—S, H are the foci of an ellipse; from S perpendiculars SY, SZ are drawn on tangents to the ellipse from the same point O. Prove (1) that HO and YZ are at right angles; and (2) show that this is also true of the parabola.

*Solution by* LIONEL E. REAY, B.A.; R. TUCKER, M.A.; F. L. WARD, B.A.; and others.

(1)  $\angle KOZ = \angle SOY = \angle SZY,$  since SO, ZY are concyclic.

Therefore, since SZ is perpendicular to OZ, YZ is perpendicular to OK.

(2) In the parabola, YZ becomes the tangent at the vertex, and OK—that is, HK—is parallel to the axis.

Therefore YZ is perpendicular to HK.

**14206.** (R. F. DAVIS, M.A.)—If AP bisect the angle BAC of a triangle and be a mean proportional between AB, AC, then  $BP^2 = 2 AB \cdot DP$  and  $CP^2 = 2 AC \cdot DP.$

*Solution by* C. JOSS, M.A.

From the data,  $\Delta BP$  and  $\Delta PC$  are similar. Draw CE parallel to DP, meeting BP in E.

Then  $\frac{AB}{AP} = \frac{BP}{CP} = \frac{PE}{CP}$

and  $\angle CPE = \frac{1}{2} \angle A.$

Therefore  $\Delta PEC$  is also similar. Therefore

$$CE \cdot AB = BP \cdot PE,$$

$$2DP \cdot AB = BP^2;$$

and  $CE \cdot AC = CP^2,$

$$2DP \cdot AC = CP^2.$$

**6387.** (R. A. ROBERTS, M.A.)—Prove that the inflexional tangents of a plane cubic may be arranged in twelve sets of six, each of which touches a conic.

*Solution by* R. P. PARANJPYE, B.A., and H. G. GHARPUREY.

The equation of a cubic can be always reduced to the form  $x^3 + y^3 + z^3 + 6mxyz = 0.$

(SALMON, *Higher Plane Curves*, § 217.)

The inflexions are the intersections of this curve with the Hessian, viz.,  $-m^2(x^3 + y^3 + z^3) + (1 + 2m^2)xyz = 0;$

therefore the inflexions are obtained from the equation of the curve and  $xyz = 0.$  Therefore the inflexions are

$$x = 0, y = -z; \quad x = 0, y = -\omega z; \quad x = 0, y = -\omega^2 z;$$

$$x = -z, y = 0; \quad x = -\omega z, y = 0; \quad x = -\omega^2 z, y = 0;$$

$$x = -y, z = 0; \quad x = -\omega y, z = 0; \quad x = -\omega^2 y, z = 0.$$

The tangents at these points are easily found. For the inflexions in the first two rows they are

$$\begin{aligned} -2mx + y + z &= 0; & \text{therefore} & -2mx + y + z = 0; \\ -2m\omega^2x + y + \omega z &= 0; & \text{therefore} & -2mx + \omega y + \omega^2z = 0; \\ -2m\omega x + y + \omega^2z &= 0; & \text{therefore} & -2mx + \omega^2y + \omega z = 0; \\ \dots & \dots & & x - 2my + z = 0; \\ \dots & \dots & & \omega x - 2my + \omega z = 0; \\ \dots & \dots & & \omega^2x - 2my + \omega z = 0. \end{aligned}$$

[The rest in Vol.]

**14290.** (D. BIDDLE.)—In a plane triangle, the square of the distance from the incentre to any vortex is in inverse proportion to the difference between the square of the inradius and the product of the segments into which the point of contact divides the opposite side.

I. Solution by A. F. VAN DER HEYDEN, B.A., and many others.

With the usual notation, we have

$$\begin{aligned} IA^2(r^2 - BD \cdot DC) &= \{r^2 + (s-a)^2\} \{r^2 - (s-b)(s-c)\} \\ &= r^4 + r^2 \{ (s-a)^2 - (s-b)(s-c) \} - \{ \Delta^2 (r-a) \} / s \\ &= r^4 + \frac{1}{2} r^2 \{ (s-a)^2 - 2(s-b)(s-c) + a^2 - s^2 \} \\ &= r^4 + \frac{1}{2} r^2 \{ (s-a)^2 + (s-b)^2 + (s-c)^2 - s^2 \}. \end{aligned}$$

The symmetry of this expression demonstrates the required result.

II. Solution by W. H. SALMON, B.A.

With usual notation

$$\begin{aligned} 1/\{r^2 - (s-b)(s-c)\} &= 1/\{r^2 - r^2 \cot \frac{1}{2} B \cot \frac{1}{2} C\} \\ &\propto (\sin \frac{1}{2} B \sin \frac{1}{2} C) / \sin \frac{1}{2} A \propto \operatorname{cosec} \frac{1}{2} A \propto AI^2. \end{aligned}$$

**14378.** (F. H. PRACHELL, B.A.)—P is any point on  $x^2/a^2 + y^2/b^2 = 1$ ; two points, D, E, are taken along the inward-drawn normal and tangent at P, respectively, such that PD = half the ordinate, PE = half the abscissa. Prove that DE cuts the axis at  $\tan^{-1} \{ (-2ab)/(a^2 + b^2) \cot 2\phi \}$ , where  $\phi$  is the eccentric angle of P.

Solution by K. G. PANCHAPAGESA AYYAR.

PD =  $\frac{1}{2} b \sin \phi$ , PE =  $\frac{1}{2} a \cos \phi$ .  
The equation to the normal PG is  $ax \sec \phi - by \operatorname{cosec} \phi = a^2 - b^2$ ;

therefore G is the point  $\{(a^2 - b^2)/a \cdot \cos \phi, 0\}$ .  
PG =  $b/a \sqrt{a^2 \sin^2 \phi + b^2 \cos^2 \phi}$ .

Again, the equation to the tangent at P is  $x/a \cos \phi + y/b \sin \phi = 1$ ;

therefore T is the point  $(a/\cos \phi, 0)$ ;  
therefore PT =  $\tan \phi \sqrt{a^2 \sin^2 \phi + b^2 \cos^2 \phi}$ .  
[The rest in Vol.]

**14414.** (I. ARNOLD.)—Find the centre of gravity of a loop of the lemniscate of JAMES BERNOULLI whose polar equation is  $r^2 = a^2 \cos 2\theta$ .

Solution by Rev. T. ROACH and G. D. WILSON, B.A.

The limits of the first loop are  $\theta = 0, r = a$ ,  $\theta = \frac{1}{2}\pi, r = 0$ ; and it is symmetrical with regard to the axis of  $x$ . Therefore

$$\begin{aligned} \bar{x} &= \iint r^2 \cos \theta \, d\theta \, dr / \iint r \, d\theta \, dr \\ &= \frac{2}{3} a \int_0^{\frac{1}{2}\pi} (\cos 2\theta)^{\frac{3}{2}} \cos \theta \, d\theta / \int_0^{\frac{1}{2}\pi} \cos 2\theta \, d\theta = \frac{2}{3} a \cdot 2 \int_0^{\frac{1}{2}\pi} (1 - 2 \sin^2 \theta)^{\frac{3}{2}} \, d \sin \theta. \end{aligned}$$

Let  $2 \sin^2 \theta = \sin^2 \phi$ ; then

$$\begin{aligned} \bar{x} &= \frac{4a}{3\sqrt{2}} \int_0^{\frac{1}{2}\pi} \cos^3 \phi \, d \sin \phi = \frac{a}{3\sqrt{2}} \int_0^{\frac{1}{2}\pi} (1 + \cos 2\phi)^2 \, d\phi \\ &= \frac{a}{3\sqrt{2}} \left\{ \frac{1}{2}\pi + \frac{1}{2}\pi \right\} = \frac{\pi a}{4\sqrt{2}}. \end{aligned}$$
